In the latter 1970s, there was a company in Corona, California, named Spawr Optical. They made high-precision laser mirrors for U.S. Defense Department projects. Now Mr. Spawr wanted to expand his business, but had few scruples about how he went about it. Spawr hired a West German representative and through him offered his laser mirrors to the Soviet Union. His first shipments he sent under falsified documentation and, of course, he had not asked for an export permit. Those mirrors are now in the USSR. Perhaps bothered by his conscience, Spawr did ask for an export license for the next lot of laser mirrors, but was turned down. He proceeded to export them under false cover again. He was caught.

Fortunately, the Spawr case is unusual, a case in which an American business knowingly and aggressively sold restricted materials to the Soviet Union. Unfortunately, the case is not unique. If there is a lesson in the Spawr case that I would suggest to you, it is that while it may be possible to break export laws for some period of time, those who do so will eventually be caught. All of the offenders in the cases I have described to you went to jail.

I am sure that most of you are aware of the Boyce-Lee case, where once again the Soviets were more than happy to pay two unprincipled young men for information on some of our most sensitive satellite programs. This case was the subject of the recent best-seller, "The Falcon and the Snowman."

As a final example, let me illustrate the sophistication of the schemes the Soviets use to acquire our technology. Their boldness is astonishing. In August of last year, it was discovered, based on information provided by a U.S. company here in California, that a computerized processing system designed to enhance photographs taken from reconnaissance vehicles had been diverted to the Soviet Union in 1979 from its lawful destination—a firm in Great Britain. The equipment had been returned to the firm in the United States through Great Britain for "upgrading and modification." This incident, returning stolen equipment to the United States for repair, illustrates the confidence the Soviets have developed in the course of their efforts. But for the alertness of the U.S. firm, the equipment probably would not have been seized and would have found its way back to the USSR, complete with upgrades and modifications.

Let me give you a few more observations on patterns of Soviet acquisition of Western technology.

As you all are aware, most technology is applicable not only to just military uses, but has many bona fide civilian uses as well. In the sale of advanced technology to the Soviet Union, much is made at time of safeguards surrounding "dual use" equipment. The Soviets are made to promise that technology which would be of value in military systems will not be so used.

Let us look, for example, at the case of two floating drydocks built in the West for Soviet civilian use. These docks were beyond the technical capabilities of Soviet shipyards to build: they would have had to expand shipyard facilities, interrupting the construction of warships and submarines, and this would have taken a great deal of time and expense. The first of these two floating drydocks was towed immediately upon delivery to the Soviet Navy's Pacific Fleet in 1978. The second dock was towed to the Soviet Northern Fleet when it was delivered in 1981.

These "dual use" drydocks, which the Soviets promised would be used only for civilian purposes, are now being used to repair Kiev-class aircraft carriers, nuclear-powered ballistic missile submarines, and other warships. They no doubt will also be used for the new generation of Soviet aircraft carriers projected for the 1990s. To my knowledge, they have had no civilian use.

The Kama River truck plant, which I described earlier, is another example of "dual use."

Don't ever forget: the Soviet military has first pick for any new technology acquired in the West, it is not a surreptitious, backdoor arrangement; it is part of the system. When the state controls all aspects of the economy as it does in the Soviet Union, there is little real differentiation that can be made between civilian and military industry.

This espionage effort that I have outlined saves the Soviets billions of dollars in research and development costs. It saves the Soviets years in research and development time. Indeed, in cost vs. benefit terms, the KGB is far and away the most economically productive element of the Soviet economy, because of its contribution in the foreign technology area.

But the benefits to the Soviet Union do not stop there. With our best technology in hand, they can develop countermeasures to our systems before we ever deploy them.

And Soviet industrial espionage imposes new, ever-increasing costs on us, as we struggle constantly to overcome technology we have developed, which is now in Soviet hands.

Let us not fool ourselves by imagining that Soviet technological dependence on the West in itself condemns them to permanent inferiority. The Soviets are able to learn from our mistakes; they are able to select the best from both technological worlds; they are able to focus what R&D capital they do have on areas where we are the weakest. And, of course, the United States does not always choose to deploy weapons using this advanced technology—often the Soviets do.

So, what are we doing to turn this around?

In the government, our efforts are focused in two areas, domestic law enforcement and foreign intelligence.

As you know, the intelligence community is prohibited by law from getting involved in domestic law enforcement, but let me describe for you briefly some of what my colleagues in the law enforcement field are doing.

The Commerce Department has beefed up its Compliance Division, including the opening of new field offices here in San Francisco and in Los Angeles.

The Customs Service began what they call Operation Exodus in early 1982, to detect and prevent illegal exports of technology. The system includes a national command and coordination center at Customs Headquarters in Washington, where bits of information from all over the world are woven together to identify offenses in progress. Operation Exodus has already produced a number of prosecutions, and it is only now getting into full operation.

Here in California, the U.S. Attorney General established only a short time ago a Critical Technologies Task Force, including Assistant U.S. Attorneys, postal inspectors, and representatives from the Commerce Department, Customs, the FBI, and the IRS. The Task Force is setting up law enforcement coordination links with state and local police, as well as with the technology business in this area.

Because it is the Soviet Union that is behind this industrial espionage, the American intelligence community has become deeply involved in the national effort to stem the hemorrhage of critical technology to our adversaries.

We are redoubling our efforts to learn as exactly as possible what items are on the Soviets' shopping lists, so that industry and law enforcement can take defensive measure.

We are beefing up our counterintelligence efforts, monitoring the activities of Soviet and East European agents more closely, here in the United States, and overseas, particularly in Western Europe.

We are passing this intelligence to the Justice Department, the FBI, the Commerce Department, and other elements of the government to help them target their countermeasures.

The government is also taking measures in the policy area.

COCOM, the Coordinating Committee for Multilateral Export Controls, which consists of the United States, the major Western European countries, and Japan, is being strengthened, and technology export restrictions are being updated.

We are increasing restrictions on the activities of Soviet and East European citizens in the United States.

The administration is asking Congress for modifications to the Freedom of Information Act to deny the public release of sensitive technological information, especially that relating to U.S. weapon systems.

There are many things that we in the government can do, but in the struggle to deny the Soviet Union American weapons technology, the government is essentially on the sidelines. The front line in this struggle is in industry, in your backyard: in your laboratories, in your production shops, in your sales offices. Without your awareness and your commitment, we will fail in this crucial effort to protect our national security.

There is no high-technology firm that is free from the threat of Soviet infiltration or theft. The KGB does not just target those companies working on classified defense projects. Especially vulnerable are the many small companies, developing emerging technologies whose applications are only now being explored.

What am I asking you to do? I am only asking you to be aware of the facts. The facts are that advanced technology is the key to all modern weapon systems. The facts are that the Soviet Union has a fundamental dependence upon American technology for its own military expansion. The facts are that the Soviet leadership has ordered the KGB and the GRU to get that technology through any means they can. The facts are that the KGB and the GRU are here in California, carrying out those orders. These are not suspicions. These are not allegations. These are the facts.

The American defense technology industry—you here in this room this afternoon—

have a heavy, unique responsibility. But also an opportunity.

Not only are you responsible for providing the means by which the United States can deter—or, if necessary, fight—a war. Not only are you responsible for protecting the security of those means of defense.

But, by denying the Soviet Union the fruits of your imagination, your innovation, your risk-taking, your investment—by denying the Soviet Union what you have worked for, you are not only protecting the United States, but you are also dealing a crucial, telling blow at the Soviet military buildup itself.

Just remember: they can't do it without you.●

SECURITY ASSISTANCE FOR EL SALVADOR

● Mr. EAST. Mr. President, I have been dismayed in recent days by the statements of some that military assistance to El Salvador may damage the U.S. economy. These comments follow the President's announced intention of obtaining $60 million to assist El Salvador's Government in fighting Communist terrorists.

We know from the record that virtually all security assistance given to foreign governments flows back into the American economy since the funds involved are provided for purchase of American goods and services.

Yet the same individuals who cite harm to the U.S. economy in connection with funds needed to hold back communism in Central America would gladly permit billions of tax dollars to leave the U.S. Treasury to support the International Monetary Fund and other international financial institutions that back faltering socialist regimes worldwide.

Through various devices, the U.S. Government has already given $115.6 million tax dollars so far this year in addition to $351.1 million last year to the Communist regime in Poland. The total gift to Poland is $466.7 million with more on the way. But many of the same Congressmen and Senators who apparently think it is fine to bail out a military dictatorship in Poland will not support even a modest program to help a country struggling to prevent the kind of oppression that Poland now suffers.

These motives are hard to understand. Perhaps the most charitable characterization is that logic has never been known to burden particularly the U.S. Congress.●

EXECUTIVE SESSION

Mr. BAKER. Mr. President, I have one nomination on today's Executive Calendar that appears to be cleared. May I inquire of the minority leader if he is prepared to proceed to the consideration of Robert A. Gielow, of Illinois, to be a member of the Railroad Retirement Board?

Mr. BYRD. Yes, Mr. President, I am prepared to proceed.

Mr. BAKER. Mr. President, there is also the possibility that I shall make more than one unanimous-consent request with respect to treaties while we are in executive session. Therefore, I ask unanimous consent that the Senate now go into executive session for the purpose of considering that nomination and for the purpose of making unanimous-consent requests with respect to certain treaties.

There being no objection, the Senate proceeded to the consideration of executive business.

RAILROAD RETIREMENT BOARD

Mr. BAKER. Mr. President, I ask unanimous consent that the Senate proceed to consider the nomination of Robert A. Gielow, of Illinois, to be a member of the Railroad Retirement Board.

The PRESIDING OFFICER. The nomination will be stated.

The assistant legislative clerk read the nomination of Robert A. Gielow, of Illinois, to be a member of the Railroad Retirement Board.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. BAKER. I move to reconsider the vote by which the nominee was confirmed.

Mr. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. I ask unanimous consent that the President be immediately notified that the Senate has given its consent to this nomination.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, before I ask the Senate to return to legislative session, I hope we can clear two unanimous-consent requests with respect to treaties. While I check on that, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MONTREAL AVIATION PROTOCOLS NOS. 3 AND 4

Mr. BAKER. Mr. President, I am told that it is perhaps agreeable to enter into a unanimous-consent agreement on the Montreal Aviation Protocols Nos. 3 and 4. I will state a request now for the consideration of the minority leader and the Members of the Senate.

UNANIMOUS-CONSENT AGREEMENT

Mr. President, I ask unanimous consent that at 11 a.m. on Monday, March 7, the Senate go into executive session to consider Executive Calendar No. 1, the Montreal Aviation Protocols Nos. 3 and 4.

Further, I ask unanimous consent that the treaty be advanced through its various parliamentary steps up to and including the presentation of the resolution of ratification, that the committee reported conditions be deemed agreed to, and that the time on the resolution of ratification be as follows: Six hours on the resolution to be equally divided between the chairman of the Foreign Relations Committee and the ranking minority member or their designees, and that no further understandings, reservations, conditions, declarations, or statements shall be in order.

I also ask unanimous consent that if a rollcall vote is ordered on the resolution of ratification, it occur at 11 a.m. on Tuesday, March 8, 1983.

Finally, Mr. President, I ask unanimous consent that there be 1 hour of debate prior to the vote on Tuesday to be equally divided between the distinguished Senator from Kansas (Mrs. KASSEBAUM) and the distinguished minority leader (Mr. BYRD) or his designee.

The PRESIDING OFFICER. Is there objection?

Mr. BYRD. Mr. President, there is no objection.

The PRESIDING OFFICE. Without objection, it is so ordered.

The text of the resolution of ratification is as follows:

Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of Additional Protocol No. 3 to Amend the Convention for the Unification of Certain Rules Relating to International Carriage by Air, signed at Warsaw on October 12, 1929, as Amended by the Protocols done at The Hague, on September 28, 1955, and at Guatemala City, March 8, 1971 (hereinafter, Montreal Protocol No. 3); and Montreal Protocol No. 4 to Amend the Convention for the Unification of Certain Rules Relating to International Carriage by Air, signed at Warsaw on October 12, 1929 as Amended by the Protocol done at The Hague on September 8, 1955 (hereinafter Montreal Protocol No. 4): *Provided* that:

(1) the President shall not deposit the instruments of ratification for the United States until he has determined that a satisfactory supplemental compensation plan, as reviewed and approved by the Civil Aeronautics Board or its appropriate successor, will be in operation for the United States; and

(2) the President shall give notice of denunciation of these Protocols by the United States if, at any time after their entry into force for the United States, he determines that a satisfactory supplemental compensation plan, as periodically reviewed by the Civil Aeronautics Board in light of new economic or other relevant circumstances, is not in operation for the United States, or

that the best interests of United States airline passengers are not otherwise served by continued adherence to these Protocols by the United States; and

(3) the United States Government shall continue actively to seek to negotiate higher limits on the liability of carriers than those provided under these Protocols.

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNANIMOUS-CONSENT AGREEMENT—SENATE RESOLUTION 76

Mr. BAKER. Mr. President, I wish to propound a unanimous-consent request, as in legislative session.

Mr. President, I ask unanimous consent that tomorrow at 11 a.m. the Senate turn to the consideration of Senate Resolution 76, the resolution containing the committee budgets for the several committees of the Senate. I further ask unanimous consent, Mr. President, that no nongermane amendments be in order to the resolution.

The PRESIDING OFFICER. Is there objection?

Mr. BYRD. There is no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I thank the minority leader. As I indicated earlier, to do that required the waiver of the 1-day rule and the 3-day rule. I am most grateful to the minority leader for arranging that so that the Senate will have that important piece of business to dispose of at that convenient hour.

CALENDAR OF BUSINESS

Mr. BAKER. Mr. President, there are certain other things that can be done tomorrow on the Calendar of General Orders. I will not enumerate them now except to say that we invite Senators to identify any of the several items on the calendar that can be cleared for action by unanimous consent or in a brief time for debate on tomorrow or Thursday.

We are doing very well in keeping the calendar pretty clean, and I would like to continue that. So I urge Members, particularly chairmen and ranking members, if the minority leader will join me in that request, to let us know if there are other items that can be cleared for action tomorrow.

ORDERS FOR WEDNESDAY

ORDER FOR RECESS UNTIL TOMORROW AT 10:30 A.M.

Mr. BAKER. Mr. President, no provision has been made yet for the Senate to convene tomorrow, has it?

The PRESIDING OFFICER. There has been no such order entered.

Mr. BAKER. Mr. President, as in legislative session, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 10:30 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR THE RECOGNITION OF SENATOR STENNIS ON TOMORROW

Mr. BAKER. Mr. President, I ask unanimous consent that after the recognition of the two leaders under the standing order, the distinguished senior Senator from Mississippi (Mr. STENNIS) be recognized on special order of not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR PERIOD FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW

Mr. BAKER. Mr. President, I ask unanimous consent that after the execution of the special order there be a period for the transaction of routine morning business to extend not past 11 a.m. tomorrow in which Senators may speak for not more than 1 minute each.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF CERTAIN SENATORS ON THURSDAY

Mr. BYRD. Mr. President, before the majority leader proceeds, will he get 15-minute orders for Thursday for the following Senators: BYRD, SARBANES, PELL, and BIDEN, not necessarily in that order?

Mr. BAKER. I am happy to do that.

Mr. President, I ask unanimous consent that on Thursday, the day after tomorrow, after the recognition of the two leaders under the standing order, the following Senators be recognized on special orders for not to exceed 15 minutes each: the distinguished minority leader, the Senator from West Virginia (Mr. BYRD); the distinguished Senator from Maryland (Mr. SARBANES); the distinguished Senator from Rhode Island (Mr. PELL); the distinguished Senator from Delaware (Mr. BIDEN), and the distinguished Senator from Alaska (Mr. STEVENS).

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Not necessarily in that order.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

TIME AGREEMENT ON EXECUTIVE CALENDAR ITEM NO. 3, AMENDMENT TO THE 1972 PROTOCOL TO THE 1928 CONVENTION CONCERNING INTERNATIONAL EXPOSITIONS

Mr. BAKER. Mr. President, I have another unanimous-consent request in respect to a treaty which I will state now for consideration of the minority leader and the Senate.

Mr. President, I ask unanimous consent that on Thursday, March 3, 1983, at 12 noon, the Senate go into executive session to consider Executive Calendar No. 3, amendment to the 1972 protocol to the 1928 Convention Concerning International Expositions.

Further, I ask unanimous consent that the treaty be advanced through its various parliamentary stages, up to and including the presentation of the resolution of ratification, and that time on the resolution of ratification be as follows: 20 minutes on the resolution of ratification to be equally divided between the chairman of the Foreign Relations Committee and ranking minority member, or their designees; and that no understandings, reservations, conditions, declarations and statements be in order.

The PRESIDING OFFICER. Without our objection, it is so ordered.

The text of the resolution of ratification follows:

Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of an Amendment to the Protocol of November 30, 1972 (TIAS 9948) to the Convention of November 22, 1928, Concerning International Expositions (TIAS 6548, 6549).

LEGISLATIVE SESSION

Mr. BAKER. Mr. President, I ask unanimous consent that the Senate return to the consideration of legislative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. BAKER. Mr. President, in a moment the Senate will recess over until 10:30 a.m. tomorrow.

Mr. President, at 11 a.m. the Senate will proceed to the consideration of Senate Resolution 76, the funding resolutions for the several committees of the Senate. It is anticipated that that resolution will be completed during the course of the day.

Mr. President, on Thursday, March 3, the Senate will proceed to the consideration of the Executive Calendar for the purpose of considering Executive Calendar No. 3, according to unanimous-consent agreement on which there is a time agreement.

It is hoped that we can also clear for action on Wednesday or Thursday further nominations on the Executive Calendar as they may appear at that time.

I specifically say to my friend, the minority leader, if it is possible to consider the nomination of Lewis Arthur Tambs, of Arizona, to be an ambassador and the nominations placed on the Secretary's desk for the Foreign Service. If those matters can be cleared for action either on an agreed time for debate or by unanimous consent, I would very much wish to do those things on Wednesday or Thursday as well.

Mr. BYRD. Mr. President, we are already checking on the Tambs nomination.

Mr. BAKER. I thank the Senator.

I hope then we can work those things out.

Mr. President, is there an order for the Senate to convene on Thursday?

The PRESIDING OFFICER. There is no order at this point.

ORDER FOR RECESS FROM WEDNESDAY UNTIL 9:30 A.M. ON THURSDAY

Mr. BAKER. Mr. President, I ask unanimous consent that when the Senate completes its business on Wednesday next it stand in recess until 9:30 a.m. on Thursday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS FROM THURSDAY UNTIL 10:30 A.M. ON MONDAY

Mr. BAKER. Mr. President, I have been reminded by staff that we have already entered an order for the Senate to take up the Montreal Protocols at 11 a.m. on Monday.

I ask unanimous consent that when the Senate completes its business on Thursday, it stand in recess until 10:30 a.m. on Monday, March 7.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORITY TO RECEIVE MESSAGES

Mr. BAKER. Mr. President, I ask unanimous consent that on Friday, March 4, the Secretary of the Senate be authorized to receive and refer messages from the House of Representatives and the President of the United States.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 10:30 A.M. TOMORROW

Mr. BAKER. Mr. President, I have no further business to transact. May I inquire of the minority leader if he wishes to address that question at this time?

Mr. BYRD. I know of nothing.

Mr. BAKER. I thank the minority leader.

Mr. President, I move, in accordance with the order previously entered, that the Senate stand in recess until the hour of 10:30 a.m. tomorrow.

The motion was agreed to; and at 5:20 p.m. the Senate recessed until Wednesday, March 2, 1983, at 10:30 a.m.

CONFIRMATION

Executive nomination confirmed by the Senate March 1, 1983:

RAILROAD RETIREMENT BOARD

Robert A. Gielow, of Illinois, to be a member of the Railroad Retirement Board for the term of 5 years from August 29, 1982.

The above nomination was approved subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

THE TRIO PROGRAM: THE ADMINISTRATION RETREATS FROM EQUAL OPPORTUNITY

HON. WILLIAM D. FORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. FORD of Michigan. Mr. Speaker, the current administration believes that the poor and the disadvantaged should be grudgingly maintained on crumbs. But programs that might expand the opportunities for those from outside the country club set are not in favor. This administration's idea of a safety net is one stretched across the doors of opportunity to bar the way out of poverty.

The clearest and most flagrant example of this philosophy in action is the proposal in the fiscal year 1984 budget for the TRIO programs. The TRIO programs provide to low-income students whose parents did not attend college the supportive services they need to enroll in and graduate from college. These services include counseling, basic skills instruction, tutoring, and information about a college admissions and financial aid. These programs have a long track record of success in providing effective aid to those who would break out of the cycle of poverty and dependence and achieve the upward mobility afforded by higher education. Among TRIO students, 41 percent are black, 35 percent are white, 17 percent are Hispanic, 4 percent are American Indian, and 3 percent are Asian. This program is an integral part of the Federal commitment to equal educational opportunity.

The President's budget for fiscal year 1984 proposes to cut the appropriation for TRIO from $154.7 million to $35 million, a reduction of 77 percent. The result would be the elimination of 1,137 TRIO projects serving 471,930 students at 767 higher education institutions and 69 community agencies. Services for 185,280 black students and 79,050 Hispanic students now served by these projects would be terminated.

The President's budget also proposes that eligiblity for the remaining $35 million would be restricted to institutions whose enrollments are more than 50 percent minority students. This proposal flies in the face of the fact that the overwhelming majority of students who need the aid of the TRIO programs, including minority students, do not attend predominantly minority institutions. Currently, 7 of 10 black students and more than 9 of 10 Hispanic students (outside of Puerto Rico) are enrolled in an institution where minorities do not constitute a majority. Lest anyone think that this proposal is a bonanza for black colleges, they would receive the same amount—$23 million—under the President's proposal for TRIO as they now receive.

The administration's proposal for funding the TRIO programs is the most shortsighted and mean-spirited idea in a budget characterized by its lack of fairness and compassion. As the Congress works its will on the fiscal year 1984 budget, I trust that the TRIO programs will receive an appropriation beyond last year's modest level and that the administration's proposal will be rejected.

A list by State of the institutions and community agencies which would lose TRIO projects under the administration's budget proposal follows:

INSTITUTIONS WHICH WOULD LOSE TRIO PROJECTS UNDER THE ADMINISTRATION'S PROPOSAL

ALABAMA

Alabama A & M University; Alabama Center for Higher Education; Alabama State University; Alexander City State Junior College; Bessemer State Technical College; Brewer State Junior College; Concordia College; Enterprise State Junior College; George C. PERSONAL EXPLANATION

HON. JIM MOODY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. MOODY. Mr. Speaker, I was unavoidably detained earlier today when the House took up consideration of H.R. 999, a bill authorizing the American Conservation Corps. I am a cosponsor of H.R. 999 and, had I been present, I would have voted in favor of this important legislation. I want to take this opportunity to commend the Speaker and the House leadership for their prompt attention to this bill and considering it under a suspension of the rules of the House.●

DINGELL-JOHNSON SPORT FISHERY ENHANCEMENT ACT

HON. JOHN B. BREAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. BREAUX. Mr. Speaker, along with a number of other Members of Congress, I am today introducing legislation to amend the Dingell-Johnson Sport Fish Restoration Act to increase the funds available to the States to benefit sport fisheries and to provide funds for boating safety and enhancement programs. This legislation will be one of the top priorities of the Subcommittee on Fisheries and Wildlife Conservation and Environment in the 98th Congress.

The Dingell-Johnson sport fish restoration program was established by legislation in 1951. In essence, the legislation imposes a tax on certain recreational fishing items such as rods, reels, and artificial baits. The revenue raised, currently amounting to approximatley $30 million per year, is allocated to the States on a formula basis for projects which benefit sport fisheries. Projects include fishery research, stream improvement, lake construction, boating access, and hatchery construction. The States provide 25-percent matching funds for the projects.

A coalition of State fishery agencies, conservation groups, and recreational fishing groups have long urged Congress to expand the tax base to increase the revenues going to the States. Studies conducted by the American Fisheries Society indicate that an additional $100 million is desperately needed by the States in order to effectively manage their recreational fisheries. Their proposal, originally, was to place a 3-percent tax on boats and boating equipment and include fishing items not currently taxed. This proposal was opposed by the boat and motor manufacturers and organizations representing boat owners who argued persuasively that many of those purchasing boats did not use them for fishing and thus would not benefit from the program.

During the consideration of the Tax Reform Act passed by Congress in 1982, a modified version of this proposal was included in the Senate-passed bill. At that point, Mr. JONES of North Carolina, Mr. BIAGGI, Mr. SNYDER, Mr. FORSYTHE, and myself, working with both proponents and opponents of the legislation, developed a compromise that had the support of virtually all of the parties involved. This compromise, which was rejected in conference by the House because it had not been properly scrutinized by the Ways and Means Committee, is reflected in the legislation we have introduced today. It is based on the fact that boatowners are currently paying what amounts to a user fee without receiving any benefits. Under current law, the Secretary of Treasury deposits an amount equal to the gas tax that boatowners pay for motorboat fuel into the boating fund, authorized by the Federal Boat Safety Act, and the land and water conservation fund (LWCF). However, the boating fund has received only token appropriations and the land and water conservation fund, which receives funds from several additional sources, only incidentally benefits the boaters who pay the tax.

The compromise proposal would divert that fuel tax derived from motorboats to programs that benefit recreational boaters. The receipts would be divided equally among the boating safety and the boating facilities improvement programs and the Dingell-Johnson program. In addition, it would expand the Dingell-Johnson tax to include all fishing tackle items and trolling motors, proceeds from these tax items will go to the Dingell-Johnson program. Finally, the proposal would defer the effective date of the tax on fishing tackle items to allow for the tackle manufacturers to pass the tax along to their customers.

Mr. Speaker, the Dingell-Johnson program is an unusual one. It was begun because fishermen realized that, to properly manage recreational fisheries, they had to raise money. In effect, they agreed to tax themselves. This legislation supports these fishermen and the State agencies who strive to enhance our recreational fisheries.

THE CITY LIVABILITY AWARD PROGRAM

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. DOWNEY of New York. Mr. Speaker, as chairman of the Congressional Arts Caucus, I would like to call my colleagues' attention to an exceptionally worthy project of the U.S. Conference of Mayors and Philip Morris Inc.

For the past 3 years the Conference of Mayors and Philip Morris have joined in a joint effort to promote awareness of the important role the arts can play in making America's cities more pleasant places to live and in strengthening urban economic vitality. Through their cooperative sup-

port, each June at the annual meeting of the Conference of Mayors the City Livability Award is presented to the mayor who has shown exemplary leadership in incorporating the arts into the everyday life of the city. Past winners have been Mayors Henry Maier of Milwaukee (1980), William Donald Schaefer of Baltimore (1981), and Jane Byrne of Chicago (1982). In addition to the recipient of the award, several mayors receive recognition for their cities' efforts with certificates of Outstanding Achievement in the Urban Arts.

At the midwinter meeting of the Conference of Mayors in January, Philip Morris announced the awarding of a grant that will make it possible for the conference to turn the City Livability Award series into a year-round program. I was proud to be present at the meeting when this award was announced.

Because of the grant, the conference will now be able to establish and staff a national clearinghouse on the arts. Recognizing the extremely difficult economic times and the resultant pressures upon mayors who are attempting to initiate and maintain arts programs, the conference staff will aggressively seek out information on how mayors are financing urban arts programs despite tight budgets, will centralize that within the clearinghouse, and will disseminate that information, not only through a new bimonthly newsletter but also by actively calling ideas generated to the attention of individual mayors for whom they may be useful.

The clearinghouse will gather information on strategies for arts development funding, procedures to encourage public/private sector cooperation in the arts, and ways in which city government and private agencies can contribute to specific arts development activities.

The program will encompass all forms of the arts, including urban design, programs to broaden arts awareness, art in public places, creative use of the arts to help achieve urban policy objectives, and support for traditional performing arts activities.

Mr. Speaker, we all understand the value of the arts for our cities and their people—as a method of increasing their vitality as well as lifting spirits that are lagging during these difficult economic days.

Given the central importance of the arts, I commend the sponsors of the City Livability Award program and wish them much success in their continued effort to make our cities more pleasant places in which to live and work.●

LEGISLATION ON OUR NATION'S WATER NEEDS

HON. BERKLEY BEDELL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. BEDELL. Mr. Speaker, today I am reintroducing, along with DOUG BEREUTER and 13 of our colleagues, legislation which I hope will serve to generate an informed discussion of our Nation's water needs and the authority of each State to utilize the water resources within its boundaries. Although I think it has been generally accepted that each State has the authority to determine water use within its borders, I believe that recent developments have given rise to the need for an examination of the limits of an individual State to divert shared water resources for use outside of the State.

Particularly important in this regard is the Supreme Court decision last July in Sporhase against Nebraska which overturned a long-standing ruling by the late Justice Holmes in 1908 and declared water to be an article of commerce within the meaning of the commerce clause of the Constitution, and therefore subject to Federal control. Yet the Sporhase decision did allow the States to enact statutes to preserve and conserve their water resources.

However, a recent Federal district court ruling in January in El Paso against Reynolds indicated that only the strongest conservation rationale could justify a State statutory ban on water exports, leaving most Midwestern and Western States, which generally face problems of water scarcity, with a questionable defense under their existing statutes against interstate water demands from a multitude of sources.

Mr. Speaker, we need to determine our national water priorities and to begin to answer the difficult water questions raised by these court decisions. I am hopeful the bill we are reintroducing today will stimulate this dialog and lead to positive action by the Congress.

The language of our bill is straightforward. It merely prohibits any State from selling or permitting the sale of water resources shared with other States for use outside its borders unless there is in place a compact between these drainage basin States and the sale is approved by all of them.

The bill has been reintroduced because we are extremely concerned that such a sale, approved without the consent of the adjoining basin States, will set a dangerous precedent for future situations—in effect, putting a large, perhaps irreparable crack in our reservoir of water problem solutions. I fear these sales, by not having the aforementioned consent, will serve short-term parochial interests at the expense of other States and our national welfare. States would be pitted against each other in competition for this precious commodity. Indeed, recent developments indicate this competition is already beginning.

Mr. Speaker, condoning such sales would, I am afraid, open a Pandora's box of troubles, evolving into a situation where States would be acting purely for short-term economic reasons over prudent, wide-ranging actions serving the general good of our Nation. A precedent would be set which could escalate into full-scale bidding wars between differing interests for available water. Eventually, the water would be allocated to the user with the greater financial resources, rather than reserved for practices which may be more responsible. In this instance, allocation by the marketplace may not be sound and would pervert what would otherwise be the reasonable distribution of our water resources. To this end, the legislation direct the Secretary of Agriculture, in consultation with the Secretary of the Interior, to study the effects of interbasin water transfers on agriculture and agricultural productivity. If large-scale transfers of water are to be contemplated, I believe it is wise to know initially their effects on this crucial segment of our economy.

By enacting the proposal that my colleagues and I are introducing today, Mr. Speaker, we might avoid the intolerable situation where one or two interests dictate the distribution of this essential, inalienable, and rather finite resource. At the same time, we would be pursuing a cautious and more responsible course in shaping our country's future water policies, taking into consideration our needs and sources of supply. Many unanswered questions exist with regard to our water policies, such as ownership or claims and rights of competing interests, and these matters should be resolved before we allow States to sell or permit the sale of shared water resources outside of their borders in an unrestricted fashion. It is incumbent upon us to respond in a responsible manner to the court's decisions that water is merely another economic good to be traded in the marketplace with seemingly little regard for possible adverse consequences.

One fact remains clear. In finding answers to these difficult public policy questions, we must maintain a spirit of cooperation and openmindedness and work together to solve our problems, rather than struggle at odds with each other.

Mr. Speaker, I ask that the legislation be entered in the RECORD at the conclusion of these remarks. Thank you.

The text of the bill follows:

H.R. 1749

A bill to require the Secretary of Agriculture, in consultation with the Secretary of the Interior, to study the effects of interbasin water transfers on agriculture and to prohibit any State from selling or otherwise transferring interstate waters located in such State for use outside such State unless all States in the drainage basin of such waters consent to such sale or transfer

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Congress finds that—

(1) adequate water resources are necessary to maintain the Nation's level of agricultural productivity;

(2) the redistribution of water resources may adversely affect agricultural production and the environment; and

(3) there is growing concern about the increasing demands on the Nation's limited water resources.

(b) The Secretary of Agriculture, in consultation with the Secretary of the Interior, shall study the effects of interbasin water transfers in different regions of the United States on agriculture and agricultural productivity. Such study shall be completed, and a report of such study shall be submitted to the Congress, not later than 18 months after the date of enactment of this Act.

SEC. 2. No State shall sell or otherwise transfer or permit the sale or transfer, for use outside of such State, water which is taken from any river or other body of surface water which is located in or which passes through more than one State or from any aquifer or other body of ground water which underlies more than one State unless—

(1) there is in effect an interstate compact (A) among the States in the drainage basin of such river or other body of surface water, or (B) among the States under which such aquifer or other body of ground water lies, which governs such sale or transfer, and

(2) all the States which are parties to such compact consent to such sale or transfer.●

THE RETIREMENT OF LEO E. GORDY, SR.

HON. ROY DYSON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. DYSON. Mr. Speaker, it is a great honor for me to recognize an outstanding citizen upon the occasion of his retirement. Mr. Leo E. Gordy, Sr., is being honored at a retirement banquet on Saturday, March 5, 1983, at Delmar Fire House in Delmar, Del.

Mr. Gordy was born and reared in Salisbury, Md., and attended elementary and high schools in Wicomico County. During World War II, he volunteered for service in the U.S. Army. Upon induction, his tour of duty began at Camp Lee, Va. The major portion of his duty was in France. Prior to an honorable discharge, he attained the rank of sergeant. After his discharge from the service, he worked in one of the old landmark hotels in Salisbury. This was followed by employment with the Delmarva Power & Light Co., beginning in 1949. On January 31, 1983, he cleared his desk for the final time, joining the world of the retirees after 34 years of dedicated and loyal service to his employer. I take this opportunity to wish him a happy and enjoyable retirement.●

TRIBUTE TO EDITOR IRENE KAPLAN OF OCEANSIDE, N.Y.

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. LENT. Mr. Speaker, it is all too frequent, in these hectic times in which we live, that the achievements and community contributions of some of our most outstanding citizens tend to be overlooked.

With that in mind, I rise to bring to the attention of my colleagues the career of a most remarkable woman, who, I am proud to say, is a constituent of the Fourth Congressional District of New York, which I have the honor to represent.

I refer to Irene Kaplan, of Oceanside, N.Y., editor of the Oceanside and Rockville Centre editions of the Long Island Journal. Her life and her career in the newspaper world have been combined in service toward her community which are unexcelled.

In her editorial post, she is particularly noted for her two outstanding columns, "Oceanside as I See It" and "Rockville Centre as I See It." They keep the residents of those communities fully informed as to what's going on. Her witty and friendly style of writing add greatly to the enjoyment of these two features. Irene is perhaps best known, however, for her very special column "I'm a People Lover," which gives her readers informative insights into the lives of community, religious, and political leaders. I might say that Irene makes no mistake in describing herself as a people lover. Her warm, outgoing personality wins her friends wherever she goes.

But her newspaper work is only one facet to the life of this truly remarkable woman.

It is difficult to conceive of a community activity in which Irene Kaplan has not been a participant. Just consider, Mr. Speaker, some of her accomplishments in the civic life of her community.

Irene Kaplan has served as president of the Oceanside Jewish Center Sisterhood, and is currently a member of center board. She has served on the Oceanside PTA Board, and was vice president of the Band Parents Association. Irene Kaplan has a great love for the theater, and has performed in a number of Theatre Guild productions, and produced the smash hit "Funny Girl" for the Oceanside Jewish Center. She is a member of B'nai B'rith, and the Oceanside Hadassah, and has been very active on the executive committees of the Israel bond campaigns.

In fact, Mr. Speaker, later this month, on March 6, Irene Kaplan is being honored for her community service at a testimonial breakfast at the Oceanside Jewish Center.

This community tribute is a recognition of Irene Kaplan's dedication and commitment to her community, and her devoted service to the causes for which she has given so much of her time.

Mr. Speaker, such dedicated service to community, and great achievements in the newspaper field deserve the commendation of every one of us. I know that my colleagues in this Chamber join me in congratulating Irene Kaplan for her achievements, and in offering her all good wishes for continued success in the future.●

1979 EASTER FLOOD IN MISSISSIPPI

HON. WAYNE DOWDY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. DOWDY of Mississippi. Mr. Speaker, on behalf of three important organizations in the Fourth District of Mississippi, I have introduced H.R. 1680, to relieve them of any obligation to repay the Federal Emergency Management Agency grants that they received after the 1979 Easter flood in my State, and were later determined ineligible for.

I am happy to say that I have the full support of my colleagues from Mississippi, Congressmen WHITTEN, MONTGOMERY, LOTT, and FRANKLIN, for this important legislation.

Junior Achievement of Jackson, Miss., the Jackson Symphony Orchestra, and the Mississippi Museum of Art were encouraged by the Federal Emergency Management Agency to apply for funds following the 1979 Easter flood in Mississippi. These nonprofit organizations received FEMA grants, repaired the damage caused by the flood, and some months later were demanded by the emergency agency to repay the moneys on the grounds that they were ineligible for such funding.

Each member of the Mississippi congressional delegation contacted FEMA last year, urging officials to reconsider their decision to demand repayment of the grants. Unfortunately, our appeals failed to receive favorable replies.

Junior Achivement, an effective educational vehicle for exposing high school students to the workings of the American economic system, is supported solely through voluntary contribu-

tions. The Jackson Symphony Orchestra and the Mississippi Museum of Art also depend primarily on private moneys since they receive very little public funding. They very well may not have been able to repair their facilities without the FEMA grants, and to repay this Federal aid would probably mean terminating their services.

I urge the Members of the House to join me and my Mississippi colleagues in supporting H.R. 1680. It would be very unfortunate to sacrifice such fine public services because of FEMA's reversed decision that they were not eligible for emergency funding.●

LITHUANIAN INDEPENDENCE DAY

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. RODINO. Mr. Speaker, I want to share with my colleagues a letter to the editor of the Newark Star Ledger written by Jack Stukas, which appeared on February 16. Mr. Stukas writes in recognition of Lithuanian Independence Day, and asks that we pause for a moment to remember the brave struggle for freedom of the Lithuanian people. We should all be reminded that, as Mr. Stukas so eloquently states: "Lithuania will not perish as long as ideals of freedom and justice and righteousness prevail."

THE LITHUANIAN QUEST FOR FREEDOM

DEAR EDITOR: On Feb. 16, nearly a million Americans of Lithuanian descent commemorated the 65th anniversary of the restoration of Lithuanian Independence.

Once the largest state in Europe, from the 14th to the 16 Century, following its union with Poland, Lithuania gradually diminished in size until the Lithuanian-Polish federated state/commonwealth was divided in 1795, among Prussia, Austria and Russia. Most of Lithuania fell subject to harsh czarist rule, until World War I gave her leaders the opportunity on Feb. 16, 1918, to declare to the international community that Lithuania was again an independent state.

During her 22 years of independent life, 1918–1940, Lithuania, and her sister Baltic republics of Latvia and Estonia, made tremendous economic, cultural and social progress. However, in violation of peace treaties and nonaggression pacts, Soviet forces moved into Lithuania and her sister Baltic republics in 1940, and through coercion and fraud, forcibly annexed them.

The seizure of the Baltic States by the Soviet Union was thoroughly investigated by a select Committee of the House of Representatives, 83d Congress, in 1953 and in 1954, which found that "the Soviet Union, without provocation, did in 1940, invade Lithuania, Latvia and Estonia, thus committing an act of unprovoked aggression." Subsequently, on June 21, 1965, the House unanimously passed H.R. 416, urging the President of the United States . . . "to bring the force of world opinion to bear in behalf of the restoration of the rights of self-determination to the Baltic States."

Lithuania, and her sister republics, continue to be occupied and oppressed by Soviet forces and suffer the lack of basic freedoms and rights, including the right to worship. Terror, torture in jails, deportation to slave labor camps, and committal to psychiatric hospitals continue to this day. There is no freedom of press, speech or assembly. Oppression and persecution of the faithful is attested to in an underground paper. "Chronicle of the Catholic Church in Lithuania," which marked its 10th year of existence last year.

Lithuanians in the Free World are thankful to those nations that do not recognize the absorption of Lithuania, Latvia and Estonia by the USSR and regard the Baltic States as victims of aggression, according their former diplomatic corps full recognition. Such is the position of the United States. Both houses of Congress impressively commemorate Lithuanian Independence Day on Feb. 16.

On Jan. 13 of this year, the European Parliament, at its plenary session in Strasbourg, France, adopted a resolution requesting that the Council of Foreign Ministers submit the question of the Baltic States to the Decolonization Subcommittee of the United Nations. The European Parliament overwhelmingly (96 votes against six), expressed hope that the Conference of Foreign Ministers will use their best endeavors to see that the aspirations of the peoples of Lithuania, Latvia and Estonia as to their form of government be realized.

Lithuania will not perish as long as ideals of freedom and justice and righteousness prevail. Lithuania cannot be destroyed by perfidy and brutality and tyranny. There will always be a Lithuania; a Lithuania in the hearts of men, a Lithuania in the culture of people, a Lithuania in the history of the world's struggle for freedom, and in due time, a Lithuania at the conference of the world's great family of nations.

JACK J. STUKAS, Ph. D.,
Vice President, Supreme Committee for the Liberation of Lithuania,
Watchung, N.J.●

YOUTH EMPLOYMENT ACT OF 1983

HON. JOSEPH M. McDADE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. McDADE. Mr. Speaker, today I have introduced the Youth Employment Act of 1983, Legislation that will provide meaningful work and educational benefits for our Nation's young adults as well as establish programs to repair and improve our national public lands.

Over the past 5 years much has been written about the deteriorating condition of our Nation's natural resources. Few realize that the Federal Govenment is solely responsible for the protection, conservation, and productivity of well over 1 billion acres of land. The Department of the Interior alone manages 170 million acres of rangeland, 23 million acres of commercial forests, and 800 national park sites and facilities to mention only several public holdings.

Unfortunately, the pace of public investment in these lands has not kept pace with the demands of those resources. Particularly noticable are the conditions in our national parks and recreation areas. In 1980 alone nearly 200 million people visited Bureau of Land Management recreation areas and 220 million visited national parks. Due to both fiscal and manpower restraints many of these facilities have been forced to close or severly restrict hours of operation.

Another critical resource that is sorely underutilized are our Nation's young adults. While much is written about the 10 percent unemployment rate among adults nearly 40 percent of our Nation's youths are unemployed. This is an intolerable situation and we must strive to rectify this devastating trend.

This bill is patterned after the former Young Adult Conservation Corps and the Youth Conservation Corps. Specifically, the two components of this bill would be funded through 1988 at a $400 million level per year. The Secretary of the Interior would administer the program with the cooperation of the Secretary of Agriculture.

Typical conservation projects carried out through the program would include conservation of urban parks, forests, wildlife refuges, preservation of historic and cultural sites, and development and maintenance of recreation areas, roads, trails, and waterfronts.

Enrollees must be unemployed between the ages of 15 to 25, citizens or lawful permanent residents of the United States.

Reflecting the fact that the Northeastern/Midwestern United States has suffered from the most chronic, long-term unemployment, priority consideration will be afforded those individuals who are economically, socially, and educationally disadvantaged, as well as youth's residing in labor surplus areas and States which had an unemployment rate for youths aged 16 to 25 equal or exceeding 12 percent during the preceding calendar year as established by U.S. Department of Labor Statistics.

Whenever, possible, enrollees would receive academic credit from educational institutions for competence developed from conservation work and training and from academic study during nonworking hours. Work skills would be certified and participants would receive job guidance and placement aid after completing the program.

Mr. Speaker, this country cannot afford to continue to lose the productivity of her young people. Equally important, we cannot lose the productivity of our public lands. This legislation is a small investment in our Nations

future—both her land and her future generation.●

THE MEETING OF THE PARTIES OF THE CONVENTION ON TRADE IN ENDANGERED SPECIES

HON. JOHN B. BREAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. BREAUX. Mr. Speaker, during the 97th Congress considerable attention was paid to the reauthorization of the Endangered Species Act of 1973. Many amendments were made to that act and I believe that we have made significant progress in protecting our Nation's endangered species. We have also reviewed our international commitments regarding the protection of wildlife and, in particular, the Convention on International Trade in Endangered Species of Wildlife Fauna and Flora (CITES). Through legislation and appropriate regulation, I believe we are establishing a proper approach to regulating wildlife through the implementation of professional and scientific management concepts.

In April 1983 the fourth meeting of the parties of CITES will take place in Botswana. Several proposals of major significance will be coming before the parties for action. One of the major areas concerns the concepts of ranching and farming of wild species. In general, those concepts are acceptable as they insure the continuation of species without harming wild stocks. Surinam and Reunion have submitted proposals to ranch and rear green sea turtles in a controlled environment. Green sea turtles are listed in appendix I of CITES and, as a general rule, appendix I species cannot be imported or exported for commercial purposes. However, when appendix I animal species are bred in captivity for commercial purposes they are deemed to be included in appendix II and can be traded commercially in conformity with the provisions of CITES.

In that regard, on January 22, 1982 the Pacific Legal Foundation and the Association for Rational Environmental Alternatives filed a petition for rulemaking with the Fish and Wildlife Service of the U.S. Department of the Interior for implementation of a mariculture exemption for trade in green sea turtle products from the Cayman Island Turtle Farm located on the Grand Cayman Island in the British West Indies. In addition, Grand Cayman Turtle Farm, Ltd. and the Government of the Cayman Islands have requested a review of the policy.

In the fall of 1982, the Subcommittee on Fisheries and Wildlife Conservation and the Environment held oversight hearings pursuant to that request and took testimony on the issue. In addition, I have had an opportunity, in the company of officials of the Department of Commerce, State and Interior, to visit the Cayman Islands and discuss this issue with government officials and managers of the farm. I was pleased to see that, on January 3, 1983, a Federal Register notice was published jointly by officials of the Interior and Commerce indicating that they would review the special rule concerning U.S. trade in certain sea turtle products according to CITES.

Mr. Speaker, I sincerely feel that it is important that the United States continue to review its policies concerning commercial trade in all species. Benefits to be derived from artificial propagation, farming and ranching of wild species is certainly a beneficial and worthy concept. Of course, we must continue to monitor such operations on an individual basis to determine whether or not they meet the criteria established by Congress, the respective Departments of the executive branches as well as the provisions of CITES. We must also make certain that the enforcement capabilities of those agencies are maintained at a level that allows for this monitoring and strict enforcement of the applicable laws and regulations. I commend the Departments of Commerce and Interior for taking this step and sincerely believe that a flexible policy regarding these issues will be one that will be most beneficial to threatened and wild species throughout the world.●

EDUCATION IN THE SCIENCES

HON. COOPER EVANS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. EVANS of Iowa. Mr. Speaker, within the next few days, we will be considering H.R. 1310, the Emergency Math and Science Education Act. This is perhaps one of the most important pieces of legislation to come before this body in some time. In this complex world where computer terminals organize our offices, and advances in technology influence every aspect of our daily life, the importance of educational training in the sciences cannot be overemphasized.

Recently, the president of the University of Iowa, Dr. James O. Freedman, delivered a speech to the Joint Service Clubs of Iowa City, Iowa, that highlights the importance of education in science and technology.

I heartily agree with Dr. Freedman's speech. In today's world, it is becoming almost mandatory for all us to have a basic knowledge of the science. The shortage of trained professionals in the sciences is well documented. The need to enhance education of the sciences on the elementary and secondary level is obvious. Dr. Freedman's speech points these facts out dramatically.

I commend to the attention of this body the following excerpts of Dr. Freedman's speech and urge a quick and positive response to these problems by this body.

EXCERPTS OF DR. FREEDMAN'S SPEECH

As the achievements and applications of scientific research have become more wondrous, we have responded with pride rather than understanding, with respect rather than an achieved, critical distance.

Lacking an adequate appreciation of the basic principles of science and technology, most Americans cannot command the breadth of perspective necessary to meet the challenges presented to a society.

* * * * *

For a nation that aspires "to think with wisdom" about the social and political consequences of scientific achievement and technological development, such a consequence is profoundly disturbing.

We would do well, in our present predicament, to take Thomas Jefferson as our exemplar. For Jefferson believed passionately that an educated citizenry was the safest repository of democratic values. He believed that one of the purposes of liberal education is to prepare men and women to exercise the serious responsibilities of citizenship.

For too long, liberal education in the United States has neglected to emphasize an understanding of science and technology and of their possibilities and limitations. If we are to vindicate Jefferson's faith in the wisdom and vision of an educated citizenry, we must strengthen our efforts as a nation to instill in young men and women a greater appreciation of the principles of science and technology and of the relevance of those principles to decisions concerning the future of our society.

Liberal education should teach students that science is an intellectual activity of the greatest rigor, subtlety and complexity.

* * * * *

It should teach students that science is comparable, in many respects, to the creation of poetry, the painting of pictures, and the writing of history.

* * * * *

As liberal education teaches the principles and nature of science, it must stress that science serves the human aspiration for an ordered explanation of the universe.

* * * * *

So long as we remain committed to Jefferson's faith that an educated citizenry is the safest repository of democratic values, we must educate the next generations of citizens to appreciate the powers and limits of the general laws which are the foundation of science, so that they can recognize that uncertain line where scientific facts end and political and moral decisions that implicate those facts begin. The challenge of education in the sciences is a challenge to be worthy of the responsibility of democratic citizenship.

By teaching the fundamental principles of science as part of a liberal education, universities will deepen the understanding that students receive of the nature of the universe and enlarge the appreciation that citi-

zens possess of the social meaning of technological change.

They will also sustain this nation's tradition of scientific discovery and technological innovation—a tradition that runs from Benjamin Franklin to Thomas Edison to Luther Burbank to Jonas Salk. And finally, they will enhance this nation's ability to manage the complexity of a modern economy, to release the innovative energies of public agencies and private companies, and to exploit fully the developing opportunities for technological growth.

But each of these outcomes depends upon more than our resolve that liberal education embrace the basic and applied sciences. It also depends upon our success in preparing well-qualified scientists and engineers in numbers adequate to meet our national needs.

At the end of World War II, the international community admired the United States as the world's leading nation in science and technology. During the ensuing years, the United States educated large numbers of scientists and engineers, in part out of fear of Russian superiority as symbolized by Sputnik. Many of the persons trained during these years made contributions that were instrumental in the attainment of our national goals, including efforts to put the first person on the moon, to harness nuclear power for domestic uses, and to perfect open-heart surgery.

These decades of achievement were made possible, in considerable degree, by the sustained investment that the federal government made in universities, an investment that provided scientists with the time, the resources, the laboratories, and the equipment necessary to conduct research and to educate men and women who were entering upon the study and the professions of the sciences.

In recent years, however, the United States has reduced its commitment to scientific excellence. During the period from 1965 to 1980, the proportion of the gross national product that the United States invested in research and development fell by more than 20 percent. During the same period, Japan increased the proportion of its gross national product invested in research and development by 27 percent, West Germany by 41 percent, and the Soviet Union by 21 percent. As a consequence of these developments, the proportion of scientists and engineers in our labor force has declined steadily since 1965.

The United States has now lost its international preeminence in some areas of science and technology. The achievements that enabled our scientists to dominate the Nobel Prizes in science for so many years rest upon investments made many decades ago.

At the moment, many other nations, like Japan, Germany, and France, are making significant national commitments to science and technology, and, more importantly, are allocating the resources that give meaning to those commitments. In France, for example, President Mitterrand has committed the government to support research and development during the next five years at an annual rate at least eight percent greater than the rate of inflation. Nothing approaching this level of support has been discussed by policy makers in this country.

Although undergraduate students continue to be attracted to many of the applied sciences—particularly in areas where opportunities in private industry are great, such as computer science and engineering—fewer young men and women are entering professions involving the basic sciences. Of those who are, fewer are pursuing the study of basic science beyond the baccalaureate degree, primarily because cutbacks in federal funding have restricted opportunities for the graduate education of young scientists.

Taken together, this combination of increased opportunities in private industry and the decreased availability of federal support for the study of science has changed the pattern of student choice that prevailed until recently and has created serious problems for higher education and the nation.

Let me speak specifically of engineering. As you doubtless know, applications and admissions to colleges of engineering across the nation have risen sharply in the last decade, often exceeding the capacity of universities to hire new faculty, to build new classrooms, and to equip new laboratories.

As the opportunities available to engineers in the private sector have become more and more attractive, fewer and fewer engineering students are pursuing graduate studies and the advanced degrees that would qualify them for careers in engineering education. At the same time, an increasing number of faculty members are leaving engineering education in order to take better-paying positions in the private sector.

If these disturbing trends continue, the standards of engineering education in the United States—now among the highest in the world—will inevitably decline. And as they do, our society's capacity to prepare a sufficient number of engineers who are qualified to meet our most imperative national needs will be in serious jeopardy. So, too, will our nation's capacity to support technological innovation.

If the United States is to have a sufficient number of skilled engineers and other scientists, it must make a national commitment to enrich the resources of universities to prepare men and women for careers in basic and applied sciences—men and women who will engage in teaching as well as in research.

Universities account for more than half of the basic research conducted in the United States. Forty percent of all the scientists and engineers engaged in basic research are employed by universities. Seventy percent of all Ph.D.s engaged in basic research are employed by universities. University scientists thus comprise one of the nation's most important resources.

But universities face many obstacles to making science and scientific careers attractive to students and faculty members. One of the most prominent is the deterioration of laboratory facilities and equipment for carrying out basic research.

A recent report of the National Science Foundation found that the growing obsolescence of scientific instrumentation is impeding both the progress of fundamental research and the rate of technological innovation in the United States.

When universities do not possess state-of-the-art equipment—which is too frequently the case today—they are unable to prepare scientists for the most advanced and promising opportunities in the educational and industrial worlds. In addition, scientists who have not been trained to use state-of-the-art equipment while they are students inevitably will be forced to undertake costly retraining at a later time if their career development is not to be artificially limited.

As scientific instrumentation in the nation's leading research universities becomes increasingly out-of-date these universities cannot effectively carry out the basic research upon which scientific innovation depends.

The crucial link between basic research and scientific innovation is well-illustrated by a current development at the University of Iowa. Faculty members from the College of Engineering and the College of Medicine are working together to develop two-dimensional echo-cardiograms to distinguish abnormal heart tissue from normal heart tissue. If their interdisciplinary investigation is fully successful, echo-amplitude analysis will be an easily-implemented and noninvasive means of characterizing heart tissue.

Having collaborated closely with the heart specialists, the engineers are now building a prototype of the innovative instrumentation required for the use of this new diagnostic technique. From this prototype, private industry will develop technologically the actual instruments that physicians will one day use. The basic research done at the University will thus provide private industry with a creative contribution that it can make the subject of commercial development.

As this example suggests, there is a dynamic interplay between basic research and technological development. That interplay can only thrive if universities have state-of-the-art equipment with which to conduct basic research. If they do not, many commercial industries—including, in this case, the medical instrumentation industry—will lose their competitive position in the markets of the world and suffer serious economic loss. It is essential, therefore, that this nation undertake a major program to renovate, rehabilitate, and modernize the facilities and equipment at those universities where basic research is carried forward.

Because the teaching of science, the conduct of scientific research, and the rate of scientific innovation depend so heavily upon the quality of universities, this nation must also insure that academic careers remain attractive to scientists—those who presently are faculty members and, equally important, those who prospectively are faculty members. At the same time, it must make special efforts to encourage more people to undertake careers in science—especially women and members of minority groups, who remain seriously underrepresented in the occupational spectrum of the sciences.

The problems of education in the sciences are not limited, however, to universities and colleges. One of the great unfinished items on the agenda of this nation is to strengthen the quality of secondary education. And in no area of secondary education is the need for strength more urgent than it is in the sciences.

Any demonstration of that need must begin with the fact that half of all students now in high school take no courses in science beyond the tenth grade. In a recent report, the National Science Foundation warned that "the most serious, long-term threat to our national science and technology capabilities is the declining emphasis on science and mathematics in the nation's secondary schools."

* * * * *

Unless we reverse the trends they (NSF) document, our continuing failure to prepare sufficient numbers of qualified teachers of science for our secondary schools will have serious consequences for the development of the human resources of the nation.

When education in the sciences is deficient in secondary schools, students who have the aptitude and ability to become scientists are not identified because they are not exposed to the excitement that science holds, nor are they motivated to accept the challenges that advanced courses in science would bring.

In addition, those students who do not go on to universities or colleges are not adequately prepared to live and work in a society in which the need to understand the impact of science and technology grows greater every year.

The preparation of new generations of Americans competent in science will require teachers who can capture the imagination of secondary school students by the model of their mastery and the glow of their enthusiasm and can motivate students to pursue the advanced study of science when they enter universities and colleges.

Yet, far too few college graduates are electing to become teachers of science at the secondary school level. A recent study by the Iowa Academy of Science reported that in 1970, Iowa colleges and universities graduated 269 certified science teachers; in 1982, they graduated only 87. A University of California study came to a similar conclusion. It found that the number of college graduates preparing to teach secondary school science courses declined from 1971 to 1980 by 65 percent.

Many college graduates who are qualified for careers in secondary school science teaching choose instead to work for private industry because the financial rewards are greater. At the same time, more and more secondary school teachers of science are leaving their jobs in order to take positions in private industry at significantly higher salaries.

In addition, the relative position of secondary school teaching in the status structure of American occupations has declined steadily during the past three decades. Our society no longer accords secondary school teachers the kind of public respect that in an earlier day sustained their devotion and compensated them for their comparatively modest salaries.

Unless we are prepared to compensate secondary school teachers adequately and to grant them the esteem they merit, we cannot expect to attract teachers in the numbers and of the quality that we must have if we are to educate the generations of scientific technicians and industrial leaders that an internationally-competitive economy will, in the years ahead, most certainly need.

The future of this country depends upon the investment that our generation chooses to make in the most able and most promising of our young men and women. It was Adam Smith, whose name is so often invoked in economic discussions these days, who wisely said, "The skill, dexterity, and knowledge of a nation's people is the most powerful engine of its economic growth."

If we fail to invest in our nation's young people now because the costs seem high, the price we pay later will be higher still, because the trends by which the United States has already lost its preeminence in several areas of science and technology will almost certainly accelerate.

We are a nation that has benefited greatly from education—in the stable political freedom that we have enjoyed, in the economic prosperity that we have, for so long, taken virtually for granted, in the shared social responsibilities that we have voluntarily assumed. Because we have benefited so greatly from education, the weakening of our national commitment to education in the sciences is a source for serious concern.

We still have the opportunity to reverse the deterioration in science education that has occurred in recent decades. We still have the opportunity to bridge the "gulf of mutual incomprehension" between the two cultures that C. P. Snow warned against in 1959. We still have the opportunity to vindicate Jefferson's faith that an educated citizenry is the safest repository of democratic values. But we must act promptly and we must act decisively.

H. G. Wells, the British author, once wrote that "civilization is a race between education and catastrophe." As we seize the opportunity to strengthen education in the sciences, at both the university and the secondary school levels, we will not only insure that education wins that race with catastrophe. We will also enrich the quality of our civilization.●

DAIRY SURPLUS REDUCTION ACT WILL WORK

HON. STEVE GUNDERSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. GUNDERSON. Mr. Speaker, on February 17, the Dairy Surplus Reduction Act (H.R. 1528) was introduced by a bipartisan group of Congressmen to offer a new and better solution to the surplus production problem that continues in the dairy industry.

In brief, the legislation would establish a voluntary incentive program under which participating dairy producers would be paid $10 per hundredweight for reductions they make from the level of milk they marketed in calendar year 1982. Funding for the incentive payments would come from a single 50 cents per hundredweight deduction on all milk marketed commercially.

When introducing H.R. 1528, its sponsors noted that it would solve the surplus production problem faster and at a lower cost to the Government while, at the same time, providing participating producers with greater annual income than under the current deduction program.

A scientific and computerized random sample of readers conducted recently by the national dairy magazine Hoard's Dairyman concludes that 60 percent of American dairy farmers would participate in this voluntary program. This would result in a total annual reduction in milk production of 12 billion pounds and a total annual savings of $1.5 billion to the Government.

Mr. Speaker, the complete results of the survey were reported in this morning's Milwaukee Sentinel. That article follows and I commend my colleagues' attention to it and H.R. 1528:

SIXTY PERCENT OF U.S. FARMERS POLLED WOULD CUT MILK PRODUCTION

FORT ATKINSON.—About 60 percent of U.S. dairy farmers would voluntarily take part in a proposed program to cut back milk production by 12 billion pounds and save the government nearly $1.5 billion annually, according to a survey by a national dairy magazine.

W. D. Knox, editor of Hoard's Dairyman, said Monday that 1,894 questionnaires were sent out, and 571 usable responses were received. He said the accuracy of the survey was within plus or minus 5 percent.

Knox said 62 percent of those surveyed in the West approved of the proposal, 61 percent of those in the North Central region, 62 percent in the Southwest, 65 percent in the Southeast and 51 percent in the Northeast.

The survey concerned the Voluntary Incentive Program developed by a coalition of farm and dairy organizations and milk plant operators. It was introduced in Congress Feb. 17 by a bipartisan group of Senators and Congressmen.

The government now is spending $2.2 billion per year to buy and store surplus cheese, butter and non-fat milk powder. The support price for milk has been frozen at $13.10 per hundredweight for the last three years, but farm milk production has continued to climb.

Knox said that paying a $10-per-hundredweight incentive to farmers who cut back production instead of $17 per hundredweight for a surplus, would save $840 million, and an additional $615 million would be raised through a 50-cent-per-hundredweight government assessment on what is produced.

The survey results have been sent to Department of Agriculture economists who are analyzing various options he said.

"One thing is certain," Knox said. "The present program is not working. The surplus problem is growing and a simple reduction in the support level will not solve it."●

CONSUMER DEBTOR BANKRUPTCY REFORM LEGISLATION

HON. HAL DAUB

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. DAUB. Mr. Speaker, I rise in support of the "Consumer Debtor Bankruptcy Amendments Act of 1983."

As a small businessman, credit union president, and attorney, I have followed with interest and concern the rising number of unnecessary straight bankruptcy filings, much of which stems from abuses of our current bankruptcy laws. Many of my constituents are also becoming aware of the problems relating to chapter 7 "straight" bankruptcy because the issue has expanded from one of concern to the retailing and credit industry to one that affects each American citizen.

Over the last several years, the number of personal bankruptcies has increased dramatically. Though some of this increase can be laid on hard

economic times, the rate of increase has far exceeded levels in previous recessions. I believe that there is now a clear consensus that a large portion of this increase has been the result of unnecessary filings encouraged by the unintended effects of reforms in the 1978 Bankruptcy Reform Act.

Quite simply, the 1978 act may have gone too far in the name of giving all debtors an opportunity for a fresh start. Too little attention may have been paid to the basic fact that credit is extended on the basis of an ability to pay from future earnings. As a result, the current Bankruptcy Code allows an individual to claim bankruptcy based on a strict assets-versus-liabilities test that need not take into account the ability of the individual to repay debts from future income. Losses incurred by retailers and other creditors from bankruptcy-related losses are passed on to other consumers in the form of higher prices or tighter credit standards. This can be a particular problem for small businesses which often must rely on credit sales to compete with the major chain operations.

A recent national study underscores the magnitude of the problem. Of the $6 billion worth of debt wiped out each year under chapter 7, it has been estimated as much as one-quarter represents individuals who could, without undue hardship, repay the money owed. This is not fair to the rest of our citizens and must be corrected.

Let me emphasize that the bankruptcy laws are a necessary element of an enlightened and progressive society, and I would not for a moment consider changes that would adversely affect their real mission—to afford relief for borrowers who are truly unable to meet their loan obligations. Individuals who find themselves unable to pay their debts because they have been laid off from their jobs or have been unexpectedly faced with other difficult economic circumstances need the opportunity provided by our bankruptcy laws to pick up the pieces of their lives. This does not mean, however, that our bankruptcy laws were ever intended to allow individuals to rid themselves of debt that they knowingly and fairly accepted and have the ability to repay.

It is for the purpose of correcting the abuses in our bankruptcy system and restoring the needed balance between debtor protection and fulfillment of debt obligations that I join Representative SYNAR and others in cosponsoring this legislation.

If enacted, the Consumer Debtor Bankruptcy Amendments Act would provide a number of reforms needed to stem the growing tide of unnecessary bankruptcies. It would insure, for example, that debtors who have filed for bankruptcy receive counseling with respect to their options under the Bankruptcy Code. This is critical. Interviews with persons who have gone through bankruptcy proceedings suggest that a large number of consumer debtors are unaware of the option of seeking a rearrangement of their debts by filing under chapter 13 of the code. Greater public awareness of the availability of the chapter 13 protections which allow a debtor to restructure his or her debts on a more manageable repayment schedule could save thousands of Americans each year from jeopardizing their access to credit in the future. The need for better counseling of prospective bankrupts by the bankruptcy courts themselves was one of the major findings of the National Commission on Bankruptcy.

In addition, the bill we are introducing today would grant bankruptcy courts the authority to halt a bankruptcy proceeding where the court determines, on its own motion, that the granting of relief would involve substantial abuse of the bankruptcy laws. This represents a significant modification from provisions contained in prior versions of the legislation which would have allowed a creditor to put in issue a debtor's eligibility for straight bankruptcy relief. Under the terms of last year's bill, H.R. 4786—and I believe under the terms of Representative BOUQUARD's recently introduced bankruptcy legislation, H.R. 1169—a creditor, as well as the court, would be allowed to raise the issue of whether a debtor is in fact capable of paying all of his or her debts under a rearrangement. I still believe a creditor should have the right to raise that issue, but at least the bankruptcy courts will have authority on their own motion to review and to dismiss unnecessary or abusive filings. Moreover, I believe this change will significantly improve the legislation in the eyes of many of our colleagues.

Other provisions of the bill carry forward many of the valuable reforms of the 1978 act by further streamlining or eliminating cumbersome administrative procedures.

I would further add that this measure corrects a situation that has created great difficulty and hardship for our agricultural community. Grain elevator failures pose a special problem because of the inability of the courts to move quickly to distribute back to the farmer the crops that have been stored in bankrupt elevators even if the operator has no title to the grain.

This part of the legislation has been endorsed by the Farm Bureau Federation, the American Soybean Association, National Association of Wheat Growers, the American Agricultural Movement, National Governors Conference, National Association of State Departments of Agriculture, as well as others. I would point out that the original opposition of the American Bankers Association to this provision has been resolved.

Very simply, this legislation allows the courts to accept valid warehouse receipts and scale tickets as proof of ownership. It requires the judge to meet a 120-day time limit on the determination of grain ownership. If the farmer makes demand for reclamation of his crops, the court may honor it, and if it does not, then the court shall secure such a claim with a lien. Finally, the bill provides that all holders of a valid warehouse receipt shall share in the distribution of the assets. Those not holding warehouse receipts shall share in the second tier of distribution.

This legislation is long overdue for consideration in this body and I am very pleased that today we have the opportunity to address it as part of an overall package of reform and consumer protection.

I look forward to speedy consideration and passage of this important legislation.●

DR. WILLIAM R. PITTS, SR.: A TRIBUTE

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. MICHEL. Mr. Speaker, yesterday I had the sad duty to report to you and our colleagues the death of a universally respected and beloved member of our Capitol Hill family. I refer to Dr. William R. Pitts, Sr., who served almost 40 years in the House. For a quarter of a century he was an irreplaceable aide to Les Arends, my Illinois colleague and former minority whip.

In 1973, following Dr. Pitts' retirement, another Illinois colleague, Harold R. Collier, inserted into the CONGRESSIONAL RECORD a story about Bill Pitts that appeared in the De Kalb, Ill., Chronicle. Because this story says so much about this great public servant and because Harold Collier's introductory remarks are so informative, I want at this time to insert into the RECORD "Bill Pitts Departs From Capitol Hill," an insert into the CONGRESSIONAL RECORD by the Honorable Harold R. Collier of Illinois, May 15, 1973:

BILL PITTS DEPARTS FROM CAPITOL HILL

Mr. COLLIER. Mr. Speaker, during my 16 years in Congress I have become well-acquainted with many of the able and dedicated people who work on Capitol Hill. Some of them are employed by the individual Members, some by the committees, and some by the leadership.

One of the employees who has labored here diligently and conscientiously for many years is William R. Pitts, more familiarly known as Bill. He worked for several Members, including Thomas C. Cochran of

Pennsylvania, Charles Halleck of Indiana, and three Illinoisans, Ralph Church, Charles S. Dewey, and Leslie C. Arends. Bill put in a quarter of a century as an aide to Arends, the Republican whip.

Dr. Pitts retired at the expiration of the 92d Congress, but I am sure that he finds plenty to occupy his mind and exercise his numerous talents. My best wishes accompany him as he departs from the Nation's Capital.

Mr. Speaker, I would like to extend my remarks in the RECORD by inserting a story that appeared in the De Kalb, Ill., Chronicle:

STORIES A CONGRESSIONAL AIDE CAN TELL

WASHINGTON.—Bill Pitts, longtime aide to house minority whip Leslie C. Arends of Illinois, is retiring from Capitol Hill to his old books and a new pool table.

"I'll miss the hill," says Pitts, a small compact, gray man of 65 whose heavy glasses let his warmth and wisdom shine through. "You feel you're on the inside of momentous decisions. But there are frustrations when your ego has to work in anonymity."

Dr. William R. Pitts, "The old professor" to some of his friends, has a right to an ego, though he'd probably be the last to take an ego trip. For all his college degrees, he's as easy to talk to as your best neighbor.

Bill started out as the "Boy Wonder of Sharon" back in Pennsylvania where he was born in 1907, the son of a steel worker in the rolling hills.

In high school, Bill was bookish and ill at ease with small talk but he was a demon on the debate platform. He made it to the Chicago finals in the national scholastic championship and walked off with the $2,000 scholarship top prize.

"I was small and slim," Bill recalls. "My stature entered into it a little bit, but I also had a capacity to talk with feeling."

Bill's debate scholarship got him into Brown University, a small Ivy League college for boys in Providence, R.I. By waiting on fraternity tables, working as a night librarian, and picking up some of the endowment money as a debater, he earned his way. He left Brown with a bachelor of arts and a masters in history.

He returned to Sharon during the depression and wangled a job at a "Scotch clergyman's stipend" from the editor of The Sharon Herald. Bill wrote editorials and byline articles on foreign affairs. This soon led to the knife-and-fork circuit as a speaker at Rotary, Kiwanis and similar club meetings.

When his Methodist minister took a sabbatical and the pulpit replacement failed to arrive in time, Bill was prevailed upon to fill in as a lay preacher. He did so well, he never missed a Sunday in some pulpit in Pennsylvania, Ohio or Indiana.

Bill got to Washington when his editor told Rep. Thomas C. Cochran, a Pennsylvania Republican, he had a young man on the staff who wanted to study law. The editor suggested Bill work in the congressman's office and go to school at night.

That's the way it worked out. Bill attended Georgetown University for some eight years, winning a bachelor's, master's and doctorate in law.

"I wouldn't do it again," says Pitts. "I had an intellectual curiosity. I wanted to be a professor in government."

About the time Cochran decided to return to Pennsylvania to become a judge, Bill married Florence Graham in 1935. She was from nearby Niles, Ohio, just across the line from Sharon, and they had met on a blind date. They're still together as Bill goes into retirement.

With his new responsibilities, Bill wanted a congressman "with a safe district" so he went with Rep. Ralph Church of Evanston, Ill. He even took up residence in Evanston.

When Church lost in a senatorial primary, Bill decided to go into law, but Charles S. Dewey, a Republican running in Church's old neighboring district, said Bill should stay in Washington with him.

"It was too precarious, but he talked me into it," Bill grins.

World War II came and Bill went into the Navy as a deck officer under training for amphibious operations. He got orders to the Navy Department as a special assistant to the renegotiation board and handled all the board's appeals. He dealt frequently with the Navy Secy. James V. Forrestal, who gave him a commendation ribbon.

"I admired him greatly," say Bill. "He was one of the greatest men I ever came in contact with. He was fair and compassionate."

Dewey, Bill's former millionaire congressman boss, was meanwhile defeated for reelection. But when they met again after Bill was mustered out in the rank of lieutenant commander, Dewey persuaded his one time aide to join him at Chase National Bank in New York City where he was a vice president.

"I ended up with the bank as special legal officer attached to the hierarchy," says Bill.

He hadn't moved his family, so when he returned about a year later to pack for New York, he ran into Rep. Charley Halleck, newly-elevated majority leader of the Republican 80th congress.

"Oh, great!" Bill said when Halleck asked him to be his aide. "I'd like that."

"The 80th was a great congress," declares Bill. "It passed the Taft-Hartley Act, it balanced the budget, it had a surplus, it initiated the Marshall Plan for Truman and he called it the "Do-nothing congress."

As Bill sees it, it won the enmity of the Democrats because Halleck bottled up in rules and cut back on more federal housing and aid to education and public works projects on the premise the administration hadn't spent the money already appropriated.

Halleck he assesses as "an intellectual, impatient and brusque," a man calculated to give prima donnas and slow learners a hard time.

"Halleck was a great leader because he really led. He was also a great speaker. He could ad lib and give meaning to your words. He could adjust the manuscript to the situation when things were moving fast. It was said of him that he "absorbed knowledge through his skin."

His most "dramatic" time with Halleck was the GOP national convention when Halleck was in line for the vice-presidential nomination but Tom Dewey won it.

"The Dewey people, in my judgment, double-crossed Halleck," says Bill. "They promised him the nomination if he could deliver certain delegations. He filled his side of the bargain."

The Republicans lost the house and Speaker Joe Martin had to step back down to the minority leader's post, bumping Halleck. Halleck didn't want the whip post, held by his lieutenant Arends. He supported Arends' bid to keep it and Arends won.

Bill Pitts joined Arends, who has been whip longer than anyone in the history of the house.

Bill spent 25 years as the Illinoisan's whip aide.

"Dramatics are not Arends' nature," says Bill when asked to highlight his experience. "But he's a great guy to work for."

Arends would never neglect his district for national affairs, says Bill, although by the same token he takes the whip assignment seriously.

Bill says his worst day came when the bells that call members to the chamber "kept clanging."

"We didn't know what was going on until the cloakroom told us there was shooting in the house and some members were hurt. We heard that a bullet had gone through the leadership desk."

This was where Arends sat. When the Puerto Ricans shot up the house that day, one bullet kicked up a splinter from the desk into his eye, but he was unhurt.

Arends returned to his office shakey and nervous, saying he just "couldn't understand it," Bill recalls.

Bill spent his last day in Arends office briefing his successor, Joseph H. MacCaulay, who had formerly worked for Congresswoman Charlotte T. Reid and other members of the house.

Bill says a good staff man should have a motto. His has been: "Work unseen, be more that you seem."

A TRIBUTE TO DELBERT E. (PETE) ALLEN, JR.

HON. JOHN P. HAMMERSCHMIDT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. HAMMERSCHMIDT. Mr. Speaker, I would like to take this opportunity to offer my congratulations to Delbert E. "Pete" Allen, Jr., who was recently selected to be the chairman of the National Food Processors Association at its 76th annual meeting in Los Angeles earlier this month.

Although the honor was a choice one for Pete, who has spent his entire life in the food processing business, the honor also belongs to the Allen Canning Co. and to the entire State of Arkansas. Pete is the first Arkansan in the history of the association to serve as chairman.

At this time, I am inserting in the CONGRESSIONAL RECORD, the article entitled, "Allen: World's Largest Private Canner, and Growing" from the January issue of the publication entitled, "Processed Prepared Foods," which documents the amazing Allen success story.

The article follows:

[From the Prepared Foods, January 1983]

ALLEN: WORLD'S LARGEST PRIVATE CANNER, AND GROWING

NFPA'S NEW CHAIRMAN, DELBERT E. ALLEN, JR., THE LEADING CANNER OF SOUTHERN SPECIALTY VEGETABLES AND PRODUCER OF POPEYE BRAND SPINACH IS STILL FLEXING ITS MUSCLES AFTER A DECADE OF DRAMATIC GROWTH

(By Mike Pehanich, business editor)

Old wood-frame processing plants that helped anchor northwest Arkansas' agricultural economy decades ago for the most part are gone today. However, one can still

find remnants of the old canneries where farmers brought the yield of their 20 to 40 acre plots each season.

This is one case where numbers tell the story best. The Ozark Canners Association once boasted more than 300 members. Its descendant organization, the Ozark Food Processors Association, lists only three names on its roster today.

One of the survivors of this not quite forgotten era is Allen Canning Company. But more than an anachronism, Allen is today the largest privately owned food processing company in the world, as well as the largest producer of processed southern specialty vegetables.

BUSINESS CARRIES ON FAMILY TRADITION

Pete Allen sits comfortably in his office in Siloam Springs, Ark. with a desk-size statue of Popeye—figurehead of the company's world-famous spinach branch—guarding a stack of Allen-labeled vegetable cans. He has obviously before fielded remarks that family-owned big business is an anomaly.

"We have a lot of heritage, a long family tradition," says Pete. "We know it's unique today to have a family company that's successful on a large scale. But the fact is we thought on going public 10–14 years ago and today we are further away from it than we were then. We think we can stay more in tune with the business being private."

"Pete" is Delbert Allen, Jr., the Allen Canning president. Recently he was inducted as 1983 chairman of the board of the National Food Processors Association, demonstraing that the Arkansas Ozarks have contributed considerably more than moonshine and folklore to the national product.

But ask Pete to elaborate on his success and you'll likely here more about his heritage than his personal accomplishments.

He'll talk at length about his father, Delbert Allen, Sr., whom he succeeded as president and who remains as Allen Canning's chairman of the board. He'll also bring in the older member of the current Allen triumvirate, his brother Roderick L. "Rick" Allen, the company's executive vice-president. Next, he'll trace the company's origins to their grandfather, Earl Allen, who hauled his first truckload of canned tomatoes to a Tulsa, Oklahoma market in 1926 to ink the first page in the company's history.

Like the owners of most private companies, the Allens keep profit figures close to the vest. Still, sales have been placed at between $100 and $115 million annually. More than 75 products, ranging from shoestring potatoes (potato sticks) to a lengthy line of canned vegetables, come out of Allen plants. The company has averaged 20% annual growth in recent decades, excluding the volume growth of its acquisitions, and has achieved more than 1100% growth through the 1970s alone.

Through it all, the Allens have remained down home and low-key in manner and kept close to their operations—figuratively and literally. Delbert Allen, Sr., still lives in the home that stands only a stone's throw from the site of the first Allen plant—which burned to the ground in 1962, but was reconstructed almost before the smoke had cleared. And with the exception of their private buffalo herd, the only sign of eccentricity, the family has shown little inclination to play with its profits outside of its plants.

"We operate lean and mean," says Pete. "We are competitive. We feel that we have to be the low-cost producer so every year we pour profits back into the company to modernize our plants and our operations. That's the beauty of the private company: you can spend your money in the best possible way for the company without having to worry about the bank that owns 20 percent of your stock rising up in arms."

"It doesn't take us a long time to make a decision," says the youngest Allen, Rick. "If we have to purchase machinery, consolidate our operations, or even acquire another company, we can do it without endless management debate or awaiting board approval. We're just fortunate to have a family that works together."

COMPANY EXPERIENCED GRADUAL GROWTH

While business sense no doubt runs deep through the Allen bloodlines, the company's major decisions were kept on a rather modest scale through its early decades. Growth came gradually. Its Country Plant (Plant #1) sprouted up in the family front yard and housed all of the Allen operations until 1945 when the company purchased its Town Plant in nearly Siloam Springs. It also constructed headquarters in town that same year.

In 1946, a small multi-product plant in Gentry, Ark. was purchased. But that was the end of acquisitions for a while. Allen Canning began to broaden its product base, processing various greens (turnip, mustard, kale, poke salet, collard), blackberries and sweet potatoes. The move proved to be strategically sound as it more or less positioned the company to compete in the '70s and '80s by establishing a product mix of specialty items before a backdrop of processed commodity-type products.

Today, the specialty items include the company's internationally known Popeye brand spinach, yams, okra, a variety of greens and peas, and lima beans, among others. These have helped brace the company against commodity fluctuations, which have crippled many commodity-dependent packers in recent years.

"The canner that deals only in commodities is in trouble today," sums Rick Allen.

When Earl Allen died in 1948, his son, Delbert, stepped in to run the gradually growing business. And as the Ozark canner came closer to becoming an endangered species, Delbert further developed the company's existing markets and added new plant machinery to improve operating efficiency as the company moved through the '60s. As the baton passed to Pete in 1970, Allen Canning was well-positioned to make major acquisitions, and whatever else was necessary, to make it a big-time vegetable processor.

Keeping a close relationship with many industry figures proved its advantages in 1971 when H. L. Hunt decided to rid itself of its plants in Van Buren and Alma, Ark., as well as its Alma and Butterfield labels. The conglomerate approached the Allens to probe their interest in acquiring the multi-product plants.

"We saw an opportunity not only to increase production capacity, but to market products we hadn't had before," remembers Pete. "We realized, too, that most of the southern greens and the curly leaf spinach (special to the Arkansas region) were raised in the Ozarks and that the HLH plants were within 20 miles of the spinach and greens acreage."

The purchase began a series of acquisitions during the '70s that stimulated a remarkable 1100 percent growth that decade. Two years later, an ultra-modern plant in Moorhead, Miss. became available in a federal auction.

"The southeast market was growing and we figured that a southeast plant would be advantageous," recollects Pete. "The plant was also, again, very close to the products being grown—the carrots, Tennessee green beans, squash, okra, and rutabaga."

With the Moorhead acquisition under its belt, the Allens picked up mid-decade momentum with the purchase of the King Pharr Yam processing plant in Oak Grove, La. in 1975. The family believed there was a sizable potential market for a quality southern yam and found that the King Pharr plant was positioned within a 30-40 mile radius of the yam fields. To produce the quality product it felt the market needed, it had to re-equip the plant.

"Our strategy for making acquisitions is to take a long look at an operation and try to see what should be done and isn't being done, and then speculate whether or not we can do a better job," says Pete. "If we can, we make the purchase. I'm sure that it could happen, but so far, we haven't made a mistake."

In 1971, the only major Allen competitor from the old Ozark Canners Association days—Steel Canning—sold its operations to Pioneer Foods, a rice processing firm in southern Arkansas.

The Allens kept their eye on developments. A gradual evolution in its marketing strategy had begun to take place, and the company saw the old Steele operation, like the other purchases in the '70s, fitting well into its plans. Allen had already seen a potential for low sodium canned vegetables as far back as 1960 and had positioned itself with products to exploit that market. It has also alertly looked to export possibilities. But it wanted to take greater advantage of the opportunities the institutional food market provided. Steele operations would help them gain an even greater share of the foodservice market.

"We were looking to institutional markets because we knew they would continue to grow through the year 2000," says Pete Allen. "During the '70s we were looking for the needed production capacity to tap that market. Practically all of the companies we looked at during this time were previously involved in institutional foods. We just expanded on what they were doing."

The Allens' suspicion that Pioneer's expertise in rice might not carry over into the canning industry proved to be right. When Pioneer opted to sell the plants it had purchased from Joe Steele, the Allens were happy to pick up the pieces.

The Pioneer/Steele acquisition added eight plants in the Arkansas-Oklahoma area to Allen's operations, though some were quickly consolidated. It also gave the company its popular "Popeye" spinach brand, which has been a successful export as well as domestic product. Institutional food sales were increased, as well, and soon made up 35% of the company's total business, where they remain today.

PLANNING FOR FUTURE ENSURED SUCCESS

The Allens wax philosophical as they look back at their growth over the past seven decades.

"It was simply a matter of who could see the future best and plan for the future best," assesses Delbert Allen, Sr. "It turns out that we had the best staying power. We're the only pioneering company left in the area."

The Allens point to a host of insights and quick decisions that gave them an edge over the years. They foresaw a growing market in the American southeast and positioned themselves to cop a giant share of that market. They also elected early to keep

their plants up-to-date technologically to avoid one common pitfall of many in the canning industry—antiquated equipment.

ALLEN EYEING NEW OFFERINGS

What's next for Allen Canning? The Allens don't like to reveal family secrets, but they are admittedly looking at the possibilities of the flat can—perhaps for canned entree items. And frozen products and exports remain a possibility.

"America has been generally naive in export thinking," analyzes Pete Allen. "California suffered from a surplus of fruits last year while a major export market was available. We're looking seriously at exports.

"Many third world nations, and the Saudis in particular, know about southern black-eyed peas because the U.S. has been shipping them overseas as a cheap protein source. So, that's one product for which the recognition problem has been solved. We're a step further ahead with Popeye on our spinach cans. However, some of our other items aren't nearly as well recognized abroad," he said.

"American tastes rub off in foreign countries when Americans are living or working there," adds Delbert Allen, Sr. "the Okies and the Arkies took their tastes to California during the dust bowl years and California is still the best market for poke salad greens. The same could happen in foreign countries where there are Americans looking for back-home dishes."

The export market is not, however, the only area targeted for sales growth at the present time. Though Allen products sit on some shelves north of the Mason-Dixon line, there are still significant inroads to be made into large portions of the available Yankee market. Still, an awakening interest in "soul food" dishes—and the "healthful" qualities of the southern specialty vegetables—could provide Allen with a springboard into larger portions of these markets.

"We probably need to do a better job of telling the story of the nutritional quality of southern vegetables," says Pete. "The whole vegetable industry should tout the nutritional qualities of their products, in fact."

BUSINESS TO REMAIN FAMILY-RUN

Whatever direction it heads, Allen Canning will remain a family-run operation for some time to come. Far from an oddity, Allen Canning might just as well represent a new wave, to hear its owners.

"Many publicly-owned companies are trying to get back to being private," says Pete. "We don't have long-term debt and liquidity problems. If we are going to add a warehouse or some equipment, the funds are available. I can appreciate the foresight my father had in putting the company on a sound financial base. We are approached each year by several companies—both stateside and foreign—who would like to buy Allen Canning. But we simply take their offer as a compliment. We're not interested.

"We run a tight ship. We wear a lot of hats. We can tighten our belt faster, adjust to conditions faster. We're on the threshold of tremendous technological growth. We have a sound base and a good staff."

Pete Allen takes a long breath.

"We're here for the long pull," he says.●

THE USE OF FORMALDEHYDE

HON. THOMAS J. BLILEY, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. BLILEY. Mr. Speaker, the use of formaldehyde in various products has become the subject of widespread discussion and controversy in recent months. Several Federal agencies with health-related regulatory responsibility have taken markedly different views on the need for and scope of regulation of formaldehyde. Only the Consumer Product Safety Commission (CPSC), which banned urea-formaldehyde foam insulation for use in residences and schools in 1982, has concluded that emergency regulation of formaldehyde is necessary. The Occupational Safety and Health Administration and the Environmental Protection Agency, on the other hand, concluded after study that available scientific evidence failed to warrant regulation.

CPSC's ban of urea-formaldehyde foam insulation is presently the subject of a lawsuit. The Washington Legal Foundation (WLF), a public interest law firm with over 80,000 members and 120,000 supporters, filed a brief in that case urging reversal of CPSC's ban on the grounds that CPSC failed to employ "good science" in exercising its regulatory authority. WLF noted that the Agency's action amounted to "regulation by speculation" and that similarly unjustified regulatory initiatives would be undertaken with respect to other products in the future.

The WLF has brought to my attention an editorial by the British Industrial Biological Research Association (BIBRA), a respected toxological organization, which supports WLF's view of CPSC's approach to formaldehyde regulation. Given the amount of its budget that CPSC has spent on formaldehyde regulation as well as the costs of its initiative, I believe that the BIBRA editorial deserves the consideration of my colleagues. I ask unanimous consent that the editorial be printed in the RECORD at this point.

The editorial follows:

EDITORIAL

The Consumer Product Safety Commission (CPSC) in the United States employs about 600 people at a cost of about 33 million dollars every year. In recent years they have spent about 10 million dollars a year attacking the use of urea-formaldehyde foam (UFF) for home insulation on the grounds that it constitutes a serious hazard to health because it might release around 0.1 ppm of formaldehyde into the ambient air, and occasionally up to 2 ppm where the installation has not been impeccable. The CPSC claims that levels of 0.1 ppm (though not 2 ppm) may persist for up to a year and a half and that, as a direct consequence of this, about 90 of those people currently exposed could develop cancer. (The original CPSC estimate of 150 victims has somewhat mysteriously declined.) As a consequence of the activities of the CPSC, culminating in the recently published regulation banning UFF, a section of the home insulation industry has been virtually wiped out in the United States.

The CPSC is a political body, and given the quality of contemporary political leadership in the West it is perhaps not surprising that the quality of decisions leaves a great deal to be desired. That these decisions are backed by a budget that few outside government could match is also a sign of the times (though this imbalance is under redress in the United Kingdom). But it is rare, even now, for an issue so contrived as the case against formaldehyde to be brought to such an effective and speedy conclusion, and one may note that the Environmental Protection Agency (8,500) employees and an annual budget in excess of 3.5 billion dollars), after much soul searching, has decided that formaldehyde does not constitute a risk among the U.S. population.

The real significance of the CPSC action is that by trivializing serious toxicological problems, by using hearsay evidence from people whose motivation is suspect, by using analyses which load the dice against a product, and by ignoring expert opinion and a mass of (admittedly imperfect) epidemiological evidence, the industrial use of an indispensable commodity chemical might yet be placed in jeopardy.

The facts are that formaldehyde, a naturally occurring metabolite of biological processes, is able to react with nucleic acids and is able to cause nasal cancers in experimental animals after prolonged administration at high concentrations. This has only been demonstrated in obligatory nose-breathers and only after serious ulcerative lesions, with the attendant reactive hyperplasia, have developed. It is very unlikely that the cancers could develop in the absence of serious epithelial damage, and formaldehyde is so pungent that humans are unable to stand concentrations in excess of 3 ppm unless accustomed to do so. Exposure to such concentrations would have to be continuous for such damage to occur, and the damage would certainly be detected quickly.

No reasonable person could conclude that formaldehyde constitutes a serious cancer hazard to man in these circumstances and to do so, all other motivation excluded, shows a lack of objectivity which is a terrible disservice to the public the CPSC purports to serve. This is the real point. Mankind is beset with enough problems without these being aggravated by trumped up and trivial impositions based on feeble intellectual analysis or hysteria. We really cannot accept the continual debasement of toxicological science, and of the practice of occupational and preventive medicine, by the superficial mouthings of quangos with more money than sense. The toxicology and industrial importance of formaldehyde is too serious to be treated in this anarchic fashion. It really is time for those in control of the political machine in the United States, which remains the dominant influence in toxicology today, to take on board the realization that the respect the old agencies commanded is fast being eroded by the wholesale adherence to devious expediencies exhibited by the new.

Toxicological problems are very complex and difficult and do not lend themselves to facile solutions. If the dimension of predicting human hazard is added, the complexity

is much increased. This, at once, makes the solution more demanding and worthwhile. Those in positions of influence and authority must recognize the tremendous responsibility they have to ensure that the consumer is protected, not from hazards that exist only in the minds of the emotionally labile, but from real risks in excess of those natural to a complicated industrial society.●

DEMOCRATIC CREED

HON. NICHOLAS MAVROULES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. MAVROULES. Mr. Speaker, as this Nation stands today ever vigilant in defense of freedom and democracy, I thought I would commend to the attention of my colleagues the thoughts of Mr. Anthony W. Homer of Lynn, Mass.

As you read Mr. Homer's "Democratic Creed," I am sure you will feel as I do that it is entirely fitting, appropriate, and exemplary that a private citizen has the birthright to share his thoughts with his government, here in the world's greatest democracy.

Mr. Homer feels that the adoption of his creed will advance the position of this Nation as the world's leading proponent of peace and liberty.

The creed, Mr. Homer rightfully believes, should awaken all of us and our world neighbors to mankind's paramount mission: the achievement of unity, peace, and freedom for all.

Following is the "Democratic Creed":

THE DEMOCRATIC CREED

(By Anthony W. Homer)

I believe in God, the creator of the universe, as our true Father, and in all peoples and races of mankind as the complete brotherhood of man animated with the ideal and purpose of perfecting human life; in the sanctity of divine law; that no man is a slave to another and no one a master of another, but all are sons of God and servants of our Lord; and that all men have been created with certain inalienable rights which they must be allowed to enjoy at all times and in all parts of the earth.

I believe in a perfect democracy within a state, the government of the people, by the people, and for the people, which guarantees man his natural rights and allows him to perform his sacred duty to God and to his fellowmen; in whose principles man is not the tool of the ruler, but the master of himself; and in which man does not exist for the state, but the state for man.

I believe in the state in which men are governed, but are also allowed to govern, by order and law; in the state in which men are not led forward in destroying and enslaving their fellowmen, but in liberating the oppressed and in defending their natural rights and sacred honor; in the state in which men share in all things for a common cause and live freely together to learn and progress according to the laws of human justice and equality; in the state in which men are treated as true citizens and are paid full consideration and respect.

I believe in the family of nations and in the democracy of the world by which all people and nations shall unite and live together under one flag and one world government, and shall forevermore enjoy the blessings of love, of freedom, and of peace; under which all men shall become citizens of the world and go forth in exploiting the richest of the earth for the common good of all.

I believe in a world democracy by whose virtues all the arts and sciences shall be employed only for the good and progress of mankind; and in whose dominion men shall destroy whatever is harmful to human life and shall keep on building only the things which contribute to the welfare of man and to the exaltation of his soul.

I believe in a world democracy which will cultivate the arts of higher learning and promote greater love and understanding between man and man and between God and man.

I shall exert all the power that is in me for the institution of a world democracy and help to promote world order and peace for the good of all races and peoples.●

CONGRESSIONAL SALUTE TO HON. JOSEPH P. LAZUR, OF PASSAIC, N.J., ESTEEMED BATTALION FIRE CHIEF, DISTINGUISHED CITIZEN, AND GREAT AMERICAN

HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. ROE. Mr. Speaker, on Sunday, March 6, the residents of Passaic, my congressional district, and State of New Jersey, will join together in testimony to an outstanding public safety officer, veterans' organization leader, and good friend, the Honorable Joseph P. Lazur, esteemed battalion chief of the Passaic Fire Department.

As Chief Lazur retires from his 32-year firefighting career of selfless dedication and exemplary service in safeguarding and protecting the people and property of the city of Passaic from the perils of fire, I know that you and our colleagues here in the Congress will want to join with me in deep appreciation of all of his good works and share great pride in the success of his achievements with his good wife, Jean, and other members of his family.

Mr. Speaker, Joseph Lazur has indeed earned the highest respect and esteem of all of us for the quality of his leadership and highest standards of excellence in carrying on the sterling traditions of the firefighters of America who daily risk their lives to protect the lives and property of our people. There is much that can be said of Joe Lazur and his lifetime of achievements in service to people, and with your permission, Mr. Speaker, I would like to insert at this point in our historic journal of Congress a brief outline of his good works and affiliations that will be particularly cited by his colleagues and friends on March 6, as follows:

JOSEPH PETER LAZUR

Born in Passaic, N.J., on December 7, 1917, at 64 Third Street.

Attended Holy Rosary School and Passaic School System. Worked in the bedding and furniture industry in Passaic.

Was shop steward for the United Furniture Workers of America AFL and CIO.

Enlisted and served four years in the U.S. Naval Reserve from 1937 to 1941.

Married Jean E. Kasica on April 26, 1941.

Enlisted into the U.S. Navy on March 23, 1942.

During naval service, served on battleships and destroyers during wartime and served with the U.S. Naval Minesweeping Fleet in the North Atlantic Theater of Operations, also doing escort convoy duty, headed for European allies. (Was boatswains mate in charge of minesweeping operation aboard ship.)

Was honorably discharged from the U.S. Navy on September 1, 1945, with the rank of boatswains mate first class.

After discharge from the Navy, was instrumental in organizing the returning veterans from military service and in 1946 helped establish the Rosol-Dul Memorial Post #359 American Legion of Passaic, N.J.

Served as Post Commander in 1950-51. Served in an active capacity on Post and Passaic County functions. Was Post Service officer for thirty years. Served as chairman of many committees, including Post and Passaic County Legislative Committee. Delegate to Passaic County Executive Committee from 1946 to the present (thirty-seven years). Served twice as Commander of the Passaic Veterans Alliance and also served as delegate from 1946 to the present.

Served as court attendant in the Passaic County Court System under the late Sheriff Chris Edell.

Was appointed to the Passaic Fire Department on February 1, 1951 (The first group to be appointed from a competitive Civil Service List Scoring Number Four). Promoted to lieutenant on April 23, 1959. Promoted to captain on August 21, 1967 and promoted to battalion chief on January 1, 1975. Retired on January 1, 1983.

Was Passaic Firemen's Mutual Benevolent Association (F.M.B.A.) Executive New Jersey State Delegate local No. 13 for nineteen years.

Was elected New Jersey State Firemen's Mutual Benevolent Association Vice President for three terms (three years) and three terms (nine years) as a member of the State Board of Trustees.

Passaic Fire Department Representative for Mutual Aid Fire Department Assistance. Also served as its president, which consists of Passaic, Wallington, Carlstadt, Rutherford and East Rutherford.

Served in the Passaic Fire Department in many capacities over the past thirty-two years. For the past five years as chief of the Passaic Fire Prevention Bureau and licensed by the State of New Jersey as the Fire Sub Code Official for Passaic.

Attended Passaic County Community College, Essex County College, and Jersey City State College, majoring in fire science and fire investigation.

Over the years, Joe has fought for increased widow and firefighter benefits on the State level as Local No. 13's F.M.B.A. state delegate. Joe has also been very active and productive in securing benefits for vet-

eran's widows, and disabled veterans throughout Passaic County.

On the community scene, was active in the Heart Fund, Cancer Fund, and Scout Fund Drives, also chaired many outstanding Citizen Award programs.

Mr. Speaker, throughout his lifetime, Chief Lazur has forged ahead with dedication, devotion, and sincerity of purpose in combating the perils of fire for the safety and well-being of our people. We applaud his knowledge, training, hard work and personal commitment that has enabled him to achieve the fullest confidence and strongest support of the people of our community.

It is indeed appropriate that we reflect on the deeds and achievements of our people who have contributed to the quality of our way of life here in America, and I am pleased to call your attention to his lifetime of outstanding public service.

As Joe Lazur retires his official leadership badge of courage and valor as battalion fire chief of the Passaic Fire Department, I respectfully seek this national recognition of his contribution to our people in placing others above self in safeguarding our people and property against the perils of fire. for his contribution to the quality of life for the people of our community, State, and Nation, we do indeed salute a distinguished citizen and great American—the Honorable Joseph P. Lazur of Passaic, N.J.●

TO AMEND THE TITLE VII OF THE CIVIL RIGHTS ACT OF 1964

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. MOAKLEY. Mr. Speaker, I have recently reintroduced legislation that will bring equal protection in employment to the handicapped under the Civil Rights Act of 1964.

Under existing law, there is no generally applicable prohibition against employment discrimination on the basis of handicap. Title VII of the Civil Rights Act of 1964 prohibits employment discrimination on the basis of race, color, religion, sex, or national origin; but it provides no protection for disabled workers.

The widespread exclusion of handicapped workers from employment exacts an enormous toll in terms of human dignity and the quality of life for countless Americans. Over 16 million people age 18 to 64 years reported some level of work disability in the 1976 census. Of this handicapped population, there were only 7.1 million persons working.

It is vital to realize that most of these people desire employment but do not work because of unjust and discriminatory hiring policies.

The handicapped face the dilemma of being discriminated against in employment opportunities because they are evaluated on the basis of false generalizations, misconceptions, and misinformation about their handicaps; not on the basis of their job skills, productivity, or performance.

Qualified individuals, time and again, are denied employment because of their disability when the disability would in no way interfere with their job performance. Our handicapped deserve the opportunity to be evaluated and hired on the basis of their ability and not their handicap.

The need for this legislation is obvious. There are too many employers who still will not hire an otherwise qualified individual for the sole reason of their disability. Some employers cling to the myths related to hiring the handicapped. Fears of increased insurance rates, lower job performances, and job stability, poor attendance and the required physical adjustment turn employers away from hiring the handicapped.

This unnecessary situation weighs a heavy cost on society. In 1980, it was estimated that the Federal Government spent approximately $1 out of every $13 in the Federal budget—$40 billion—to support our disabled population. State, local, and private support for disabled citizens amounts to approximately an additional $60 billion. Surely by eliminating employment discrimination of the handicapped we can help reduce this economic burden on taxpayers.

Additionally, and more important, by enacting this legislation we can help reduce the loss in human terms that is caused by discrimination against handicapped individuals. Too many deserving people are excluded from society's mainstream; left to lose their dignity and self-worth.

The time has come to include the handicapped individuals as a protected element in our population under title VII of the Civil Rights Act of 1964; protecting handicapped persons against all forms of employment discrimination under that title.

We must demonstrate our Nation's firm commitment to ending discrimination against the handicapped by enacting this legislation. I hope my colleagues will support me in my effort to give the handicapped an equal opportunity in employment.

Text of the bill follows:

H.R. 1200

A bill to amend title VII of the Civil Rights Act of 1964 to make discrimination against handicapped individuals an unlawful employment practice.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a reference in section 2, 3, 4, 5, or 6 of this Act to a section or other provision is a reference to a section or other provision of the Civil Rights Act of 1964.

SEC. 2. Section 701 is amended by adding at the end thereof the following:

"(l)(1) The term 'handicap' means the status of any individual—

"(A) who has a physical or mental impairment which substantially limits any of such individual's major life activities;

"(B) who has a record of such an impairment; or

"(C) who is regarded as having such an impairment.

"(2) Such term does not include the status of an individual who is an alcoholic or a drug abuser—

"(A) whose current use of alcohol or drugs prevents such individual from performing the job involved; or

"(B) whose employment, because of such current use of alcohol or drugs, would constitute a direct threat to property or safety of other individuals.".

SEC. 3. (a) Sections 703(a)(1), 703(a)(2), 703(b), 703(c)(1), 703(c)(2), 703(d), and 703(e)(1) are each amended by striking out "or national origin" each place it appears and inserting in lieu thereof "national origin, or handicap".

(b) The sentence beginning "Notwithstanding any" in section 703(h) is amended—

(1) by striking out "or national origin" the first place it appears and inserting in lieu thereof "national origin, or handicap"; and

(2) by striking out "sex or national origin" and inserting in lieu thereof "sex, national origin, or handicap".

(c) Section 703(j) is amended—

(1) by striking out "or national origin" the first place it appears and inserting in lieu thereof "national origin, or handicap";

(2) by inserting after "national origin" the second place it appears the following: ", or persons with any handicap,"; and

(3) by inserting after "national origin" the third place it appears the following: ", or persons with such handicap,".

(d) The center heading of section 703 is amended by striking out "OR NATIONAL ORIGIN" and inserting in lieu thereof "NATIONAL ORIGIN, OR HANDICAP".

SEC. 4. Section 704(b) is amended by striking out "or national origin" each place it appears and inserting in lieu thereof "national origin, or handicap".

SEC. 5. The sentence beginning "No order of the court" in section 706(g) is amended by striking out "or national origin" and inserting in lieu thereof "national origin, or handicap".

SEC. 6. (a) Section 717(a) is amended by striking out "or national origin" and inserting in lieu thereof "national origin, or handicap".

(b) Section 717(c) is amended by striking out "sex or national origin" and inserting in lieu thereof "sex, national origin, or handicap".

SEC. 7. The amendments made by this Act do not affect any right, remedy, obligation, or responsibility under the Rehabilitation Act of 1973.

SEC. 8. This act and the amendments made by this Act shall take effect at the beginning of the sixth month after the month in which this Act is enacted.●

THE NATIONAL COUNCIL OF CHURCHES: FALSE "PROFITS"

HON. DANIEL B. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. DANIEL B. CRANE. Mr. Speaker:

Beware of false prophets, which come to you in sheep's clothing, but inwardly they are ravening wolves. Ye shall know them by their fruits.—Matthew 7: 15, 16.

We do not have to look to Biblical times to find false prophets. We have only to look around.

For more years than I care to think about, the National Council of Churches—part of the largest organization of Christian churches in the world—has been waging guerrilla warfare against the very people who support it. Those people are the faithful parishioners who each Sunday dutifully return a portion of God's blessing to the collection plate. Little do they know what perfidious activities they are thus financing.

Those who have contributed to their neighborhood church, if it is a major Protestant denomination, have likely contributed to the Communist regimes of Cuba and Vietnam, the Palestine Liberation Organization (PLO), and to Soviet-front terrorists butchering Latin America, Asia, and Africa.

Perhaps the most insidious aspect is that the National Council of Churches goes to great lenghts to appear as a benign Christian fellowship. However, the facts belie that.

Finally, the veil of secrecy enshrouding the council's operations is being ripped away, thanks to the courageous work of David Jessup, CBS-TV's "60 Minutes," and the January Reader's Digest, in which the following article appeared.

Yes, the Lord said we would know people by their fruits: And the fruit of this tree is bitter indeed.

Many will say to me in that day, Lord, Lord, have we not prophesied in Thy name? and in Thy name have cast out devils? and in Thy name done many wonderful works?

And then will profess unto them, I never knew you.—Matthew 7: 22, 23.

[From the Reader's Digest, January 1983]

DO YOU KNOW WHERE YOUR CHURCH OFFERINGS GO?—YOU'D BETTER FIND OUT—BECAUSE THEY MAY BE SUPPORTING REVOLUTION INSTEAD OF RELIGION

(By Raël Jean Isaac)

In 1977 Linda and David Jessup began sending their children to the Marvin Memorial United Methodist Church in their Silver Spring, Md., neighborhood. When the children came home from Sunday school with "rice bags" the family was to fill with money to be used to buy wheat for Vietnam, Linda Jessup thought it odd. She had read that Vietnam's Communist government was using food as a means of forcing compliance with its oppressive regime.

David Jessup, who works for the AFL-CIO's Committee on Political Education, found that the money was to go to Vietnam via Church World Service (CWS), the relief and development arm of the National Council of Churches. Moreover, he discovered and documented that over a two-year period $442,000 in Methodist churchgoers' money alone had been sent to a number of political organizations, among them, in Jessup's words, "groups supporting the Palestine Liberation Organization, the governments of Cuba and Vietnam, the pro-Soviet totalitarian movements of Latin America, Asia and Africa, and several violence-prone fringe groups in the United States."

Were Jessup's surprising findings isolated cases? Hardly. Consider the activities of the National Council of Churches.

A FLAWED UNITED STATES

The NCC consists of 32 Protestant and Orthodox communions representing 40 million Christians (Southern Baptists and Catholics are the largest churches that do not belong to the NCC). The Methodist Church, with nine million members, is the largest denomination in the NCC and its chief contributor. After the Methodists, with their 1980 contribution of close to $8 million, come the United Presbyterians with nearly $3 million, followed by the United Church of Christ, with close to $2 million, and the Disciples of Christ and the Episcopal Church, each of which contributes over $1 million.

Established in 1950, the NCC can point to major achievements. The Revised Standard Version of the Bible was published under NCC auspices. The organization took a leadership role in the civil-rights movement. Church World Service has aided victims of natural and political disasters the world over, helped in refugee resettlement, and supported a host of projects in the Third World.

But in the last decade the National Council has become increasingly politicized. Critics charge that it supports Marxist-Leninist movements in the Third World, that it has betrayed the liberal tradition and that it has become obsessed with the alleged inherent injustices of America.

Indeed, the National Council's policy statements and resolutions portray the United States as deeply flawed. A 1979 policy statement passed by the NCC entitled "Challenges to the Injustice of the Criminal Justice System" basically attributes crimes to social conditions for which the criminal is not responsible. It claims that our criminal justice system "is inadequate to respond to the crime-related conditions which are essentially those of social injustice and conflicting values." While president of the NCC from 1979 to 1981, the Rev. M. William Howard embarked on a series of visits to those he described as U.S. "political prisoners." [1] In choosing which prisoners to visit, he was guided by research of the National Conference of Black Lawyers. That organization is affiliated with the International Association of Democratic Lawyers (IADL), a group listed by the CIA as an international Soviet-front organization. Howard visited such "political prisoners" as convicted murderer Larry Jackson of the Republic of New Africa, an organization whose goal is to establish an independent black country in five Southern states.

A number of NCC executives feel a just society is impossible under capitalism. In 1975, an Ecumenical Consultation on Domestic Hunger sponsored by the NCC passed a statement that said there was a basic contradiction between capitalism "and biblical justice, mercy, stewardship, service, community and self-giving love." Warren Day, the NCC's Director of News and Information, points out that such statements do not reflect the "official" view of the NCC. Nonetheless, the statements passed by such conferences are revealing of attitudes prevalent among the NCC staff members that organize them. Similar antagonistic views toward the American economic system are evident in the publications of the NCC's Friendship Press and in NCC-sponsored films.

ROMANTIC, NAIVE PEOPLE

As a religious organization concerned with social action, the NCC understandably gives high priority to human rights. What is troubling is that William Wipfler, director of the NCC's human-rights office, says that the Council and its member denominations are "consistent in their witness on behalf of human rights." But most of the great human-rights outrages of our time have never been condemned by the NCC's governing board. While a few individual officials of the NCC have spoken out, the official policymaking body of the NCC has failed to pass resolutions denouncing the atrocities of Idi Amin in Uganda; the killing of half a million non-Moslems by Moslems in the Sudan; Vietnam's creation of almost a million boat people; the barbarities of the cultural revolution in China; the Soviet invasion of Afghanistan—to name but a few. The NCC did condemn the Cambodian genocide, but put as much blame on the U.S. government as on the Pol Pot regime.

On the other hand, the NCC governing board has passed resolutions censuring, among others, El Salvador, Turkey, Nicaragua (under Somoza), Chile, South Korea and Guatemala, whose violations cannot be compared to those of countries the NCC governing board has ignored.

Warren Day explains the NCC's stance on human rights by saying that only countries friendly to the United States are sensitive to our public opinion, so only resolutions directed against friendly countries have any effect. But in that case, the NCC should not claim that it offers a "consistent witness on human rights."

The problem seems to go deeper. Many of those in key positions in the NCC identify several of the countries with the worst record on human rights as models of Christians. In 1977, the NCC sponsored a visit to Cuba. The delegation of church leaders reported that a "theological rebirth is evolving in Cuba that we believe can inform Christians around the world with a new intensity and depth of insight about the meaning of faith." The group insisted that there was full freedom of worship in Cuba. Yet, Cuban children are indoctrinated in atheism in schools, and no one who professes belief in God can be a member of the Communist Party or advance in his career.

Similarly, NCC officials persist in their praise of Vietnamese society. According to a brochure published by Church World Service, "Vietnam today is a nation of dedicated people, hard at work, and enthusiastically building a new society from the rubble of war." After folk singer Joan Baez and other disillusioned anti-war activists protested against human-rights violations by Vietnam, Paul McCleary, director of CWS, and James Armstrong, then a Methodist bishop and now president of the NCC, joined with a

[1] Political prisoners are commonly defined as those imprisoned for their beliefs rather than for crimes committed.

number of others to publish an advertisement in the New York Times. It insisted that "the present government of Vietnam should be hailed for its moderation and for its extraordinary effort to achieve reconciliation among all of its people." Strange adulation for a country whose cruelty is creating hundreds of thousands of refugees, whose "re-education" camps are full, and whose soldiers are engaged in warfare—including chemical warfare—in a neighboring country.

What is the attraction of leading churchmen to Third World, Marxist-Leninist societies that have severely restricted and in some cases all but eliminated religion? Judging from the characteristics of the countries singled out for praise, it is the very attempt to control all aspects of people's lives. This is interpreted as "caring" and "a sense of community." Isaac Rottenberg, a minister of the Reformed Church in America who was part of the NCC world for ten years until he was dismissed for criticizing it, offers this explanation: "These are immensely romantic people, often quite naïve."

FROM FOOD TO PHILOSOPHY

Church World Service is easily the most popular NCC program with churchgoers, a popularity reflected in its budget, which is roughly 70 percent of the NCC total. Yet even CWS has not been able to escape political influence. In 1976, it was proposed that CWS embark on a new direction, committing itself to "liberation and justice." When its longtime director, James MacCracken, refused to re-orient the agency from its traditional mission of helping the poor and hungry, he was summarily fired by Eugene Stockwell, associate general secretary of the Division of Overseas Ministries, of which CWS is a part.

Church World Service's traditional assistance programs of relief and development continue. But now CWS also engages in political advocacy, contributing churchgoers funds to programs designed to further strategic goals of governments with which CWS leaders sympathize. Recently, for example, CWS gave nearly half a million dollars for Vietnam's "New Economic Zones"—which a number of major newspapers depict as little better than concentration camps for "political undesirables." The new politicization of CWS also emerges clearly in the form of the CWS Office on Indochina Relations set up in Washington to "educate" members of Congress and government agencies on the need for diplomatic relations with, and economic aid to, Vietnam.

The Domestic Hunger Network coordinated by the NCC has much more to do with changing society than with feeding the hungry. It consists of 105 projects that in 1980 received over $650,000 raised from churchgoers responding to hunger appeals by their churches, which typically show a photograph of needy children. As Mary Ellen Lloyd, director of the project, points out, "This isn't just funding a bag of groceries." Some of the money from hunger appeals, how much she could not say, does go for emergency help, but a significant portion of it is funding political activists.

FUNDAMENTAL TASK

Not surprisingly, such actions by NCC leadership have alienated many churchgoers. Dean Kelley, an NCC official and author of a widely read book Why Conservative Churches Are Growing, delares, "The gap between the denominational leaders and the people in the pews is huge." Ten denominations belonging to the NCC have lost over three million members in the last decade. The obsession of the church leadership with advancing causes that contradict the basic beliefs of most churchgoers is felt by many to be an important factor.

A number of dissatisfied churchgoers have first become aware that something was wrong through reading NCC literature. Laura Hathaway, 61, of Spickard, Mo., a Methodist since she was 12, bought material at a United Methodist Women School of Missions she attended. Mrs. Hathaway says, "There was a play set in Mozambique with an American woman and a woman from Mozambique discussing the celebration of Mozambique's freedom. At the end of the play the American women says that in the United States everything is so complicated and immense that many Americans don't know where to begin a revolution. 'I know,' says the women from Mozambique. 'But perhaps you will learn from our struggle. There are ways.' Then the American woman says, 'Yes, there must be.' That's when I saw red. And I still do."

A major obstacle to reform is the unwillingness of the average churchgoer to acknowledge what has happened to his church. "People just can't believe that their church, the church they've loved all their lives, can be financing all these Marxist-Leninist projects," says David Jessup. "The very idea seems preposterous, an affront to common sense."

If there is to be change, it will have to be made by the men and women in the pews. Ministers for the most part are too dependent on the church bureaucracy to take the lead. Several Methodist ministers who urged their congregations not to pay their World Service apportionment have been punished, some actually forced out of the church.

Methodist evangelist Edmund Robb, who heads the Institute on Religion and Democracy, a new Washington-based organization of distinguished ministers and laymen, recognizes that there are churchgoers reluctant to take action for fear that it will divide the church. But he feels that, on the contrary, action is essential to renew and restore the church to its fundamental task of proclaiming the Kingdom of God.

"At the root of the problem," says Robb, "is the secularization of the church. The NCC has substituted revolution for religion. I believe that Christians have an obligation to work for social justice. But there will be no justice without freedom."

HOW YOU CAN HELP

The Institute on Religion and Democracy (1000 Sixteenth St., N.W., Suite LL50, Washington, D.C. 20036) will provide assistance to those who want to work within their own denominations. Its chairman, Edmund Robb, has some advice:

Stay with your church.

Make your feelings known to the boards and agencies of your church; silence is taken for consent.

Demand full disclosure of how the national church spends your collection-plate dollar.

Withhold funds from doubtful causes. In many churches, funds for the NCC and for the World Council of Churches are assigned separately, and local churches can delete them from the budget. In some denominations, your local church can designate the programs of the national church to which it wants its contributions to go.

Get involved in the decision-making processes of your national church. Local churches generally send one or more delegates to regional conferences that in turn appoint delegates to the highest policy-making body of the church. Make sure the delegates from your church believe there is a connection between Christian faith and human freedom.

(Raël Jean Isaac, a Ph.D. in sociology, has written for such publications as *The Atlantic Monthly, New Republic and American Spectator.* Currently, she is completing a major study of religious and political organizations in the United States.)●

SOCIAL SECURITY REFORM

HON. BILL ARCHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. ARCHER. Mr. Speaker, I would like to include in the RECORD today an excellent article on the recommendations from the National Commission on Social Security Reform. The author, Mr. Wilson S. Johnson, is president of the National Federation of Independent Business, which represents more than half a million small business men and women.

SMALL-BUSINESS ANGLE

(By Wilson S. Johnson)

NEW SOCIAL SECURITY PROPOSAL IS BAD NEWS

In mid-January when the National Commission on Social Security issued its recommendations, a collective sigh of relief went up from politicians of both parties. Most members of Congress said the commission produced a sound program for fixing the ailing Social Security system.

But the solution is flawed. The recommendations of the commission are minor repairs, not the major surgery needed, and some of the recommendations to aid Social Security would have a negative impact on other parts of the economy.

For example, payroll taxes again become the main revenue source. The commission proposes to slip backward to 1984 a payroll-tax increase now planned for 1985. Regular readers of this column will understand that a further rise in payroll taxes at this time will exacerbate the unemployment problem. These jobs taxes—in reality that's what they are—already overburden small business, the source of 80 percent of the nation's new jobs.

Payroli taxes account for about one of every three federal-revenue dollars, while corporate taxes have declined to less than 10 percent of those revenues. Nine Social Security rate increases have been scheduled over the period 1971 to 1990. The base wage on which payroll taxes are assessed also has increased every year.

The base and the rate of another payroll tax—federal unemployment tax—has increased three times in the same 20-year period. In other words, by 1990, the maximum tax a small-business owner pays on an employee will have increased 10 times in 20 years—50 percent a year without compounding!

Surely a country concerned about lost jobs can find a better way to raise revenues than by constantly resorting to taxes on jobs. Increasing the cost of hiring workers would continue to discourage employment growth. Small-business people I know say

that they are already learning to run their companies.

The inconsistencies between tax policy implemented in recent years and the solutions offered by the National Commission on Social Security should also stop Congress short. The idea of taxing the benefits of those making $20,000 a year contradicts recent changes in the tax law made to encourage saving. Congress introduced individual retirement accounts—and later broadened the rules—to encourage saving for one's own retirement. Taxing benefits for those whose income exceeds $20,000 (or $25,000 for married couples) will discourage many from participating in IRAs.

Worst of all the problems associated with the commission recommendations is the failure to close the short- or long-term deficits in the fund. The manner in which the revenues will be raised leaves the shortages in the mid '80s and one-third of the long-term deficit unresolved. For these reasons, the National Federation of Independent Business will oppose the commission recommendations on Capitol Hill and work with the Congress for a more comprehensive, equitable solution.●

SERVING OUR VETERANS

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. OTTINGER. Mr. Speaker, I am happy to have this opportunity to commend Genevieve Riis on her years of service to disabled veterans at the Montrose Veterans' Hospital.

Ms. Riis, known as "Ma" to hundreds of veterans, has devoted her life to helping American servicemen and veterans. During World War II, she sent letters and packages to hundreds of servicemen from her home town of Harrison, N.Y., easing their hardship as they bravely defended our Nation. Since the Montrose Veterans' Hospital opened in 1950, "Ma" Riis has given her time and loving care to the veterans there. She also brightens their lives by bringing them food and clothing, mostly provided by her own savings. At the age of 79, she continues to do what she can to aid our veterans, despite bouts of arthritis.

Her generosity and sacrifice on behalf of our deserving veterans is an example to us all. I am happy to join the members of the Harrison Lions Club in their tribute to this fine citizen.●

RELIGIOUS PERSECUTION OF BAHA'IS IN IRAN

HON. JOHN EDWARD PORTER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. PORTER. Mr. Speaker, in the past week it has come to my attention that the Iranian courts have once again sentenced to death 22 leaders of the Baha'i religious faith.

That these 22 leaders are condemned to die was confirmed by a report in the Shariaz newspaper from Kahbar Iran. Normally we learn of the fates of the latest victims of the Iranian reign or terror after the fact and not before the act is carried out. This is a rate opportunity for us to intercede on behalf of unjustly condemned Baha'is and attempt to save them from execution.

My distinguished colleague Mr. LEACH of Iowa pointed out on February 23 that the House and Senate passed Senate Concurrent Resolution 73 in the 97th Congress which stated:

That the U.S. condemns persecution of the Baha'is and holds the Iranian government respoonsible for upholding the rights of all citizens including the Baha'is; and expressed the hope that the discrimination and brutal executions within the Baha'i community cease immediataely.

The State Department published their 1982 Country Reports on Human Rights Practices. They state that the Baha'is in Iran suffer most, because their faith is regarded as heresay by the Shiite Muslims regime of Khomeni. They are persecuted and killed solely on the basis of faith.

We must urge Iran to exercise compassion. If the death sentences are carried out, Iran will be considered an international outlaw. Iran is obligated by the International Covenant on Civil and Political Rights, to give its citizens freedom of religion and association. Justice and reason must prevail over prejudice and vile hatred.

Baha'is have been denied their basic human rights; 50,000 to 70,000 Baha'i children have been denied their right to education. Baha'i marriages are not considered legal, so their women are arrested as prostitutes. Their cemeteries are desecrated, their places of worship destroyed, their means to make a living ruined, and they are being killed merely for being Baha'is.

The "final solution" planned by the Khomeni regime for the Baha'is and other oppressed minorities in Iran is not unlike the genocide of Hitler's final solution. We cannot allow the persecution of a people due to their religious beliefs to continue. This kind of brazen disrespect of international law must not go unpunished. It is paramount that we do all we can to end the evil persecution of the Baha'is by the tyrannical regime of the Ayatollah Khomeni. This is genocide and we will not stand for it. We must not allow these 22 to join the thousands of others who have died to satisfy the base hatred of a totalitarian regime living in the dark ages. The ayatollah must realize we are living in the 20th century and that this type of behavior is foul, disdainful, illegal and will not be tolerated. We shall fight this with all means at our disposal.

So finally I must urge the State Department to consider this factor in all their dealings with Iran, until it is settled to our satisfaction.●

INTERNATIONAL DAY OF THE SEAL

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. UDALL. Mr. Speaker, today I join my colleagues in commemorating International Day of the Seal. I am pleased to note the many happenings around the world to celebrate this day. From Hong Kong, to Orlando, to Victoria, Tex., communities have planned activities to educate the public about the plight of the seals. I wish to add my voice to the many thousands in celebrating the birth of the baby seal.

Each year, around the first of March, approximately 400,000 harp seals are born off the coast of Newfoundland. Of these 400,000 baby seals, 180,000 are brutally clubbed to death within the first weeks of their lives. Worldwide, an average of 1,800 seals are killed per day, each day of the year, in organized commercial hunts.

Perhaps no other animal has received the public attention the seal has. This is not only because the seal pup is a cute animal, but also because the brutal clubbing of the seal symbolizes in the most graphic manner humanity's lack of concern for their environment.

The news this morning that the European Community governments are close to agreement on a 2-year ban on the import of skins of baby seals could not be more timely. Perhaps now we can put an end to the brutal slaughter of the baby seal.●

A LITTLE CITY FIGHTS BACK

HON. DAN COATS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. COATS. Mr. Speaker, we were all stunned with the sudden and unexpected news that Corning Glass Works had tentatively decided to close its Bluffton, Ind., plant. Jim Barbieri, editor of the Bluffton News Banner, summed it up best on Tuesday, January 4, when he said:

In stunning developments here this morning, Corning Glass Works officially told tentative plans to close down its Bluffton plant. . . . The overwhelming probability would be a permanent shutdown.

Corning Glass produced the first light bulb for Thomas Edison back in 1879, and has long been a technologi-

cal leader in America. In 1964, Corning announced that it was building a new television picture tube plant in Bluffton, Ind., the largest plant in the industry. Corning president Dr. Thomas MacAvoy referred to the Bluffton plant in 1980 as "a flagship in a sea of cornfields," an example of machine technology and worker enterprise.

But now, as Mayor Flaningam of Bluffton summarized: "We've got a problem." From a 1980 peak of 857 employees, the remaining 450 workers face permanent layoff.

Immediately, rather than giving up, the community went to work. Mayor Flaningam and the chamber of commerce formed a special economic steering committee within 24 hours. Chamber executive director Carol Martin spoke of redoubling efforts in industrial development.

Local 1012 of the American Flint Glassworks Union announced a "Bluffton Survival Offer," a concession package valued from $4 million to $10 million to Corning, including a 20-percent pay reduction, a give-back on bonus pay, granting mandatory overtime, and a 2-year wage freeze.

Indiana Lt. Gov. John Mutz then announced that the Indiana Air Pollution Control Board has approved the switch from electricity to gas, satisfied that even at full production a scrubber unit would not be needed, saving Corning a $3 million investment.

At the same time, Senator LUGAR, Senator QUAYLE, and I began a process of intense negotiations with Commerce Secretary Baldrige, Ambassador Brock, and others on the questions of foreign imports, tariffs, dumping, and other trade matters that adversely impacted on Corning's ability to be competitive in the picture tube business.

We have now asked Corning board chairman Amory Houghton for an additional extension of time in order that solutions can be found to the many pressing problems facing the Corning Bluffton glass plant.

Union president Bob Perry said: "If they still close, I'll walk out that door with a smile, knowing we've done everything we can do."

"Doing everything we can do" has been the rallying cry of all involved in the "Save the Corning Bluffton Plant" effort. The past 30 days has seen an extraordinary effort by all concerned. Union, local management, community, local, State, and Federal representatives have pulled together in an unprecedented manner. Not once has partisan politics been mentioned, as Republicans, Democrats, and others have put the good of the community ahead of all other considerations.

For many years, we Americans have been complacent about foreign competition. As union president Bob Perry of the Bluffton plant says: "The good old days are over, not just at Corning Glass Works but everywhere."

Not only has the union made wage concessions but they are talking about the importance or recognizing differences between grievances and gripes. The statement: "Corning has to make money to stay in business," was made not by the president of Corning but by the head of the union.

I agree with Bluffton State representative Jess Espich who said that these voluntary efforts and the cooperation displayed is so unique that for the good of all America, this offer simply must not be rejected.

I am proud to represent the little city of Bluffton, where the spirit that built America lives on. I am proud of a community that, when facing adversity, decided to work together to fight back rather than engage in finger pointing. That spirit of unity—of all of us working together—is why Bluffton will prosper in the future.●

CONGRESSIONAL SALUTE TO THE HONORABLE CLARENCE KEHOE, JR., ESTEEMED POLICE LIEUTENANT OF OAKLAND, N.J., OUTSTANDING CITIZEN AND GREAT AMERICAN

HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. ROE. Mr. Speaker, on Friday, March 4, the residents of Oakland, my congressional district and State of New Jersey will gather in testimony to the outstanding public service rendered to our community, State, and Nation by one of our most distinguished public safety officers, the Honorable Clarence Kehoe, Jr., police lieutenant of the Oakland Police Department, good friend, leading citizen, and great American.

As Lieutenant Kehoe retires from his law enforcement career, I know that you and our colleagues here in the Congress will want to join with me in deep appreciation of all of his good works and share great pride in the success of his achievements with his good wife Carole and their sons, Clarence III and George.

Mr. Speaker, Clarence Kehoe, Jr., has indeed earned the highest respect and esteem of all of us for the quality of his leadership and highest standards of excellence in seeking optimum public safety for all of our people. There is much that can be said of Clarence and his lifetime of achievements in service to our people and with your permission, Mr. Speaker, I would like to insert at this point in our historic journal of Congress a brief outline of this good works and affiliations that will be particularly cited by his friends on March 4, as follows:

OAKLAND.—Lt. Clarence Kehoe Jr., a sensitive man who showed compassion for each individual he dealt with, plans to retire from the Oakland Police Department in March, after serving almost 26 years.

"The borough is losing a very big asset—a terrific police officer," said Chief Donald Hasenbalg. "Clarence has always shown a lot of compassion for people. In the 23 years I have known him everything he did was in a vein of trying to help people. He had no animosity to people."

"I wish there were more like him in the law enforcement field," said Hasenbalg.

While often, after many years of serving in police work, Hasenbalg said, individuals tend to become somewhat callous, Kehoe never did. "Even though he is a very large, strong man, he is a very emotional, soft person. He handled every person and every case as a major incident," said Hasenbalg. "For instance, if someone's window was smashed or a shrub torn up, others would say, 'I'm sorry it happened,' and not give the incident much more thought, but Clarence would take it as a personal affront," internalizing the upset the incident had caused the victim. "He took a personal interest in each case. It is hard to believe, but after 25 years he is still that way."

Kehoe and his wife Carole have been residents of Oakland for 27 years. Their son Clarence is a graduate of Fairfield University and works in Connecticut as an accountant; and their son, George, recently discharged from the U.S. Marine Corp, is a graduate from Indian Hills High School.

Born and raised in Clifton, Kehoe had been in the Cincinnati Reds baseball club farm system. He enlisted in the U.S. Marine Corp during the Korean conflict; and later attended Fairleigh Dickinson University while working for the Erie Railroad signal department.

Kehoe joined the Oakland Police Department in May of 1957. He was promoted to Sgt. in 1961, served as patrol shift commander and later assigned to the Detective Bureau and then the Juvenile Bureau.

In June of 1974, Kehoe was promoted to lieutenant, serving as commanding officer of the Juvenile Bureau and liaison to the borough employee safety committee.

Serving with Lt. Kehoe in the Juvenile Bureau over the years have been James Yeomans, Sgt. John Cooper, Detective Robert Knapp and the present juvenile officer Michael Madonna.

Kehoe was named Police Officer of the Year in 1972 by the Oakland Memorial Post 369; and received the Oakland Police Department Certificate of Merit Award in Jan. 1978 and Sept. 1982.

He has served as a charter member of the Bergen County Juvenile Officers Association; a member of the International Narcotics Officers Association; the State of New Jersey Narcotics Officers Association; and the Health and Welfare Council of Bergen County.

Kehoe also served as attendance officer for Indian Hills High School; assisted in formulation of the Oakland Police Department Explorer Post; was an original member of the Board of Advisers to the Ayuda Toy Drive, Rahway State Prison; is a past member of PBA local 41, and currently a member of PBA local 164.

The many police training seminars Kehoe attended throughout his career includes that of the U.S. Department of Justice, the first college accredited course given at the Police Academy of Bergen County back in 1967.

He participated in Oakland's Recreation Basketball and Baseball programs; and

served as adult advisor to the student aid committee at Indian Hills High School, along with then assistant Principal William F. Woods and then student Greg Ruhl. Together they set in motion the plan for the "Summer gym program" at Indian Hills. Kehoe supervised the program in action for several years.

Mr. Speaker, throughout his lifetime Lieutenant Kehoe has forged ahead with dedication, devotion and sincerity of purpose in combatting crime and protecting the life of our people. We applaud his knowledge, training, hard work and personal commitment that has enabled him to achieve the fullest confidence and strongest support of the people of our community.

It is indeed appropriate that we reflect on the deeds and achievements of our people who have contributed to the quality of our way of life here in America and I am pleased to call your attention to his lifetime of outstanding public service.

As Lieutenant Kehoe retires his official leadership badge of courage and valor as police lieutenant of the Borough of Oakland, N.J., I respectfully seek this national recognition of his contribution to our people in placing others above self in providing safety on the streets, security in the home and optimum public safety for all of our people. We do indeed salute a distinguished citizen for his contribution to the quality of life for the people of our community, State, and Nation—The Honorable Clarence Kehoe, Jr., of Oakland, N.J.●

TRIBUTE TO MR. AND MRS. WAYNE MURPHY

HON. BOB STUMP

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. STUMP. Mr. Speaker, I rise to pay tribute to the personal devotion of two Arizonans who for the last 9 years have spent 3 days of every month baking and transporting 50 dozen cookies for the patients in the Veterans' Administration hospital in Prescott, Ariz.

Wayne and Louise Murphy have never missed a month since beginning their cookie project in 1974. They bake several varieties. This size project requires quite a bit of muscle, which Wayne provides for Louise's bustling bakery. Their dedicated efforts are a continuation of the service this family has given to U.S. servicemen and veterans for decades. When Mrs. Murphy was in Vietnam with her husband, who was then a U.S. Navy Reserve commander, she started a USO birthday cake program that baked cakes for any serviceman in Hanoi who asked for one.

Mr. Speaker, Wayne and Louise Murphy do not seek recognition for their efforts. However, I believe their efforts need to be recognized as a reminder of the spirit of caring patriotism which has sustained this Nation since its beginning, but which is overlooked all too frequently today.

I am certain my colleagues will join me in saying thanks on behalf of the thousands of veterans whose days of illness have been brightened by Wayne and Louise. Thank you Mr. Speaker.●

CONSCIENCE VIGIL FOR SOVIET JEWS

HON. RICHARD J. DURBIN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. DURBIN. Mr. Speaker, I rise to join the 1983 Congressional Call to Conscience Vigil for Soviet Jews. There is no more important issue in the world than the guarantee of basic human rights. All people yearn for freedom; the freedom to express their own views, to worship their God in their way, to choose meaningful work, to live in a place of their liking. Yet, if this is a universal desire, it is nevertheless denied to many across the world.

The latest human rights crisis in the world is occurring in the Soviet Union, with regard to the desire of many Soviet Jews to emigrate to other countries, principally Israel. This right is being denied to all but a few.

The figures documenting this crisis are startling. In 1979, 51,320 Soviet Jews were allowed to emigrate, but this number has declined dramatically to just over 2,600 last year.

For many years, we have been aware of the well-known Soviets who have left their country; the athletes, dancers and literary notables, such as Alexander Solzhenitsyn. But the issue at hand involves a significant number of individuals who want to leave the Soviet Union. It is a mass movement, and for this reason Soviet officials have issued their crackdown. It is certainly no flattering commentary on a nation when tens of thousands of its citizens wish to leave.

As a result, the Soviets have increasingly refused exit visas for Jews. Additionally, Soviet Jews are subjected to a variety of indignities including denial of education, adequate housing, movement within the country, and advancement within their profession.

The greatest outrage, however, is the internment of individuals in psychiatric hospitals, prisons, and labor camps, usually on some trumped up charge which masks the real intent of punishing those who demand their rights.

I would like to bring to your attention the plight of one individual, Yankel Alexandrovich Groberman, who is my prisoner of conscience within the Soviet Union.

Mr. Groberman, 35, is about to complete 4 years detention in a labor camp, to which he was sentenced for participating in group action violating public order. In reality, Mr. Groberman and several companions were arrested when they protested anti-Semitic remarks by other Russian citizens.

In fact, Mr. Groberman is a "Refusenik," a term designating Soviet Jews who have applied for exit visas and been denied on several occasions. Their persistence is often rewarded with punishment.

I have written to Soviet officials, asking them to grant an exit visa to Mr. Groberman, when he completes his prison term this spring. Mr. Groberman, a shoecutter by profession, should have the right to join his family in Israel.

I urge other Members of this House to adopt a prisoner of conscience and join in a rising chorus of protest that focuses upon the Soviet Union and its regrettable emigration policy. It demonstrates the farcical nature of the "Socialist republic," allegedly based upon the workers' rights.

As the National Conference on Soviet Jewry has stated, everyone in the world should know that the Soviet Union is a tough place to live, and an even tougher place to leave.●

SUPPORT ISRAEL

HON. CHARLES E. SCHUMER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. SCHUMER. Mr. Speaker, on Sunday, February 27, 1983, an open letter to President Reagan appeared in the New York Times. A group of over 130 retired generals and admirals expressed the need for continued strong American support of and strategic cooperation with Israel, our best ally in the Middle East. Israel, using American-made weapons and superior organizational tactics, decisively defeated the Soviet-supplied armies of the PLO and Syria in Lebanon. A group of people, some of whom are from my district, were instrumental in putting this letter together and presenting it to the American people. I applaud the authors of this important letter for their efforts, and I would like to share it with my colleagues in the House.

[From the New York Times, Feb. 27, 1983]

AT LAST—A SOVIET DEFEAT

ACCORDING TO A LARGE GROUP OF U.S. GENERALS AND ADMIRALS, RUSSIA—THROUGH ITS SOVIET-EQUIPPED SYRIAN SURROGATE—HAS SUFFERED A MAJOR DEFEAT WHICH PUTS INTO SERIOUS QUESTION THE VIABILITY OF SOVIET WEAPONRY AND MILITARY DOCTRINE

In an open letter to Prgsident Reagan, more than 130 retired generals and admirals have written that Israel ". . . has made major breakthroughs in conventional and electronic weaponry designed to overwhelm and destroy Soviet-made weapons systems." The general and flag officers go on to say: "We believe that the victory of Israeli-modified American weapons and tactics over those of the Soviet Union presents the free world with a tremendous opportunity to reduce the impact of Russia's extraordinary growth in tactical forces and battlefield technology."

This letter (see text below) marks only the second time in the history of our republic that a large and distinguished group of senior military officers has publicly offered advice to their Commander in Chief.

The world's attention has been focused on the crushing of the PLO in Lebanon; the extraordinary significance of the defeat of Soviet arms has been allowed to pass with little comment by the Administration or media. This is why the officers ask Mr. Reagan to recognize the value of these battle-tested innovations and to revitalize our strategic cooperation with Israel.

This message, sponsored by the Center for International Security, is part of a nationwide effort to inform the public on significant defense issues. We finance this work entirely through voluntary contributions. If you would like to help, please refer to the box below.

Here is the full text of the officers' letter to the President, followed by a list of signators in alphabetical order:

DEAR MR. PRESIDENT: As former members of our country's military and naval services, we are taking the liberty of addressing you directly on a national defense matter of great concern to us as private citizens.

Only once before in our nation's history have large numbers of senior retired officers publicly offered advice to their Commander in Chief. On January 21, 1979, alarmed by the then Administration's apparent complacency about rising Soviet military strength and geopolitical gains, many of us wrote your predecessor to express our views. It was gratifying to find that our concerns were reflected on November 4, 1980, in the mandate which the people gave you to rearm America and to challenge Soviet aggression. The first two years of your Administration have proven the sincerity of your personal beliefs and expressed intention of restoring the security of the United States and the free world.

We are troubled, however, that the profound military significance of the decisive defeat of Soviet arms in Lebanon is being obscured by the political turmoil surrounding Israel's armed intervention. We believe that the victory of Israeli-modified American weapons and tactics over those of the Soviet Union presents the free world with a tremendous opportunity to reduce the impact of Russia's extraordinary growth in tactical forces and battlefield technology.

Despite denials in some quarters, it is clear to us that the Israelis have made major breakthroughs in conventional and electronic weaponry designed to overwhelm and destroy Soviet-made weapons systems. Advanced, battle-proven technology and tactics, as deployed by our Middle East ally, offer a unique opportunity to diminish the present quantitative superiority of Soviet forces in Europe. These advances are in the areas of anti-armor, missile site suppression, and aerial combat, as well as command, control and communications (C^3):

A modified 105mm shell which pierced the honeycomb armor of the formidable Soviet T-72 main battle tank;

Highly advanced Electronic Counter Measures (ECM) and strike techniques which neutralized and destroyed Syrian SA-6, SA-8 and SA-9 Soviet-made missile arrays without loss;

Enhanced air-to-air missilery and other aerial ECM and tactics which resulted in an unprecedented combat kill ratio of at least 85-0 against Soviet aircraft; and

A unique C^3 ability to coordinate air, land and sea operations down to the unit level.

This combination of combat-proven high technology and tactics employed under remarkable Israeli generalship, together with new NATO arms technology and targeting systems already under development, could conceivably revolutionize the overall U.S. defense posture and offers exciting prospects for arms control and disarmament negotiations. Furthermore, the adoption of these modern, advanced technologies could make a favorable impact upon future defense costs and the national budgets of the United States and our allies.

An enhanced defense for NATO forces, achieved through the incorporation of the lessons of the war in Lebanon, raises the intriguing possibility of reducing the reliance on escalation to tactical nuclear weapons because of conventional battlefield inferiority.

The entire Soviet "Wave Theory" of advance in the Central Front of NATO is based upon swift movement of mass formations of armor and infantry, closely supported by Warsaw Pact air, all protected by integrated mobile missile air defense systems. If Pact tanks can be knocked out with unique penetrating shells, if SAM sites can be neutralized and destroyed in large numbers, and if their aircraft can be shot down in a virtual Turkey Shoot, then established Soviet military doctrine comes into question.

But lest the free world relax and congratulate itself on the recent victory of Israeli-manned American arms over those of the Russians, the crushing defeat of the Soviet-equipped PLO and Syrians in Lebanon should be recognized as a possible harbinger of future Russian aggression.

According to the best unclassified intelligence, the initial Soviet reaction to their losses was to blame Syrian manpower for ineptitude. Neither Soviet military doctrine nor equipment inadequacies were considered as factors. There is now reason to believe that the Soviets are no longer so certain.

If the free world doubts the actuality or the significance of these startling advances in weaponry and tactics, Moscow cannot afford to. On an issue so fundamental to their aggressive designs, the Soviets must know whether or not their military doctrine and weaponry are flawed.

Mr. President, if this supposition is correct, the Soviets will be tempted to test their doctrine and weaponry under combat conditions—and soon.

Implementation of these plans may have already begun. The ominous replenishment of war stocks in Syria includes the construction of three bases for SAM-5 anti-aircraft missiles and the further introduction of Soviet technicians. The SAM-5—which rings Moscow itself—has never before been placed outside the Soviet Union.

Mr. President, it ill behooves military men publicly to comment upon purely political matters. However, the current strained relations between Washington and Jerusalem do not augur well for utilizing what you yourself have called "Recognizing the Israeli Asset" in your Washington Post article of August 15, 1979: ". . . the paramount American interest in the Middle East is to prevent the region from falling under the domination of the Soviet Union. . . . Israel has the democratic will, national cohesian, technological capacity and military fiber to stand forth as America's trusted ally . . . Therefore, it is foolhardy to risk weakening our most critical remaining strategic asset."

For example, Israeli ports and bases would be open instantly to U.S. forces in the event of a serious strategic threat to the Middle East. Israel constitutes the only U.S. ally capable of immediate parry to a serious thrust against free world interests in this theater. And, Israel's continued sharing of vital intelligence on Soviet operations constitutes the other essential element of U.S. security in the Middle East.

Your 1979 views have proven prescient indeed, Mr. President. We concur in our assessment of our ally's ". . . geopolitical importance as a stabilizing force, as a deterrent to radical hegemony and as a military offset to the Soviet Union." Therefore, your present initiative on the Middle East must carefully consider the Israeli requirement of strategic depth for her own security, lest our ally be transformed from a strategic asset into a liability.

We have every confidence, Mr. President, that transitory political strains will not be allowed to detract from the fundamental congruence of strategic interests cemented by a common heritage of Western values and democratic ideals.

Mr. President, we therefore urge you to revitalize the strategic cooperation between the United States and Israel, thereby enhancing the safety and well-being of the free peoples of the world.

Sincerely and very respectfully,

Brigadier General Frank Albanese, AUS (Ret).

Major General Earl O. Anderson, USAF (Ret).

CONCURRENT RESOLUTION—AUTHORIZING A BUST OF CARL HAYDEN TO BE PLACED IN THE CAPITOL

HON. BOB STUMP

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. STUMP. Mr. Speaker, I am privileged to introduce for myself, Mr. RUDD, Mr. UDALL, Mr. MCNULTY, and Mr. MCCAIN a concurrent resolution authorizing the placement of a marble bust of the late Senator Carl Hayden from Arizona, in the U.S. Capitol or in the Senate Office Buildings. This resolution is identical to Senate Concurrent Resolution 7, introduced by Senators GOLDWATER, DECONCINI, and MATHIAS.

When Carl Hayden retired in January 1969, he had served in the Congress and the Senate longer than any other Member. He represented Arizona in the U.S. Senate for 42 years and

served a total of 57 consecutive years in Congress.

His accomplishments were of national stature and included joint authorship of the constitutional amendment giving the vote to women, the original law establishing the Interstate Highway System, and of course the central Arizona project.

Over the span of several decades, Carl Hayden was Arizona's greatest asset. Yet, he did not seek publicity or notoriety. He went about the business of the country and his constituents without fanfare because he believed the folks back home were more interested in results than conversation. However, it was more than results that endeared this quiet, unobtrusive, but extremely effective man to the hearts of Arizonans.

I believe his constant concern for those folks back home was the key to Senator Hayden's success and longevity. He never lost touch with the common people. He spent equally attentive amounts of time with manual laborers in Phoenix, as with his colleagues in the august halls of the U.S. Congress.

The regard of the people of Arizona for the Senator was powerfully demonstrated during his final election campaign. He was stricken seriously ill after the primary yet was overwhelmingly reelected. Such loyalty can only be earned through years of faithful service.

Mr. Speaker, Carl Hayden may always be best known for his simple separation of the Members of Congress into two distinct groups: showhorses and workhorses. There is no better word to summarize the life of Senator Hayden than workhorse. This makes it all the more fitting that we take the time to honor and recognize the accomplishments of a man who sought no such recognition himself. The entire Arizona delegation urges prompt action by both bodies on this resolution.

Thank you, Mr. Speaker.●

I. LEE POTTER: RESPECTED REPUBLICAN LEADER

HON. FRANK R. WOLF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. WOLF. Mr. Speaker, it is with deep regret that I bring to the attention of my colleagues the recent passing of a well-known and respected Republican leader in Virginia and on Capitol Hill.

I. Lee Potter served in various leadership positions with the Republican Party and was named executive director of the National Republican Congressional Committee in 1967, a position he held for 3 years, until being appointed executive director of the Republican Congressional Boosters Club where he served until 1982.

I would like to share with my colleagues Mr. Potter's obituary notice from the Washington Post of February 25, 1983, and also a eulogy of Mr. Potter provided at services for him at the Memorial Baptist Church in Arlington, Va., on February 25.

I would also like to extend my deepest sympathy to his wife and family, many of whom reside in Arlington.

[From the Washington Post, Feb. 25, 1983]

I. LEE POTTER, 73, DIES; VIRGINIA REPUBLICAN LEADER

I. Lee Potter, 73, the chairman of the Virginia Republican State Central Committee from 1956 to 1962 and a Republican National Committeeman from 1964 to 1972, died of a ruptured aorta Feb. 21 at Arlington Hospital. He lived in Arlington.

Mr. Potter was born in Pennsylvania and grew up in Northern Virginia. He earned a degree in accounting and business administration at Southeastern University. He was a professional organ player and union printer before becoming active in construction and real estate development in 1935.

At his death, he was president and board chairman of Jelleff's, a women's specialty store in Arlington. He had been a director of several Northern Virginia banks.

In politics, Mr. Potter was elected chairman of the Arlington County Republican Committee in 1950. From 1954 to 1955, he was administrative assistant to Secretary of Labor James Mitchell. In January 1957, he was named special assistant to GOP National Committee Chairman Meade Alcorn and director of the committee's southern division.

He became executive director of the National Republican Congressional Committee in 1967, and three years later was named executive director of Republican Congressional Boosters Club, the fund-raising arm of the Republican Senatorial and Congressional Campaign committees. He held that post until 1982.

He was a member of the board of the Wolf Trap Regional Foundation and of the Virginia Fish and Game Commission. He was chairman of the American Cancer Society of Northern Virginia.

Survivors include his wife, Dulcie H., of Arlington; a son, Alan, of Locust Grove, Va.; his father, H. Stewart Potter, and two sisters, Rae Vaughn and Jean Toombs, all of Arlington, and three grandchildren.

EULOGY—I. LEE POTTER

How do you measure the value of a man?

Is he of greater value because he sits among the leaders of his nation or because he is known for integrity.

Is he worth more because of his abilities in business or because of his generosity and good humor?

Is he to be judged by the frequency with which his name is heard, or by the affection of his family?

Is he to be known for the material success achieved in his lifetime, or by the number of those who call him "friend?"

Is it more important that he accumulated wealth, or that he earned respect?

Is his greater legacy to be the building of a political organization or the installation of high moral character in his descendants?

Every man has different dimensions, different facets, different characteristics, and different abilities, but we have had the rare privilege of knowing a man of true value, and we will not soon forget him.●

PRAISE FOR PAMELA HARRIMAN

HON. BILL ALEXANDER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. ALEXANDER. Mr. Speaker, in my part of the country it is a tradition to salute great ladies—merely for being great ladies, and not on account of any particular favor they may have shown you. So at some point I would certainly be finding the occasion to praise Pamela Harriman—distinguished in her own right and well-known also as the wife of that great Democrat and great American, the Honorable Averill Harriman.

But, as it happens, Pamela Harriman has indeed favored me and several hundred other Democrats. First, she invited us to dinner Monday night at the Madison Hotel and brought all our contentious tribes, at least for an evening, under one contented roof as we honored, with her, the Nation's 34 Democratic Governors and their spouses. We could not help reflecting, by the way, that Governor Harriman's tenure as chief executive of New York was close to being a model one, and that was another bright aspect to the occasion. But Mrs. Harriman favored us even further. She called us—an assembly of office-holders, for the most part—"brave" and told us that we had held a high ground against the advances of reactionaries and suggested that we had something to do with preserving the hopes of mankind.

To the extent that any of that is true—and we will certainly strive mightily to prove her right—it is true because of the kind of faith and energy which only the Pamela Harrimans of this world possess. She has inspired us through the years as only a great and gracious lady knows how to inspire. She could, if she chose, remain on the sidelines of active politics and be admired at a distance. But she is not one to sit in the grandstand; she is a participant in the public business and in the great affairs of our Nation, and we have learned to look to her for initiatives. Pamela told us last night that she was proud to belong to a party that would "live up to the best ideals of this greatest of nations." Well, I for one am proud to belong to a party that includes Pamela Harriman, and happy for that accident of birth which makes me a fellow citizen with Pamela, who came to us by conscious choice.

Thank you, Pamela Harriman, for coming and thank you for giving me this occasion for saying so.

I attach a copy of her remarks for the RECORD, to wit:

REMARKS OF PAMELA HARRIMAN AT DINNER FOR DEMOCRATIC GOVERNORS

We are here to celebrate the marvelous Democractic gains of 1982—and to prepare for the sweeping Democractic victory of 1984.

First of all we salute the Democratic Governors—who now hold two-thirds of all the Governorships in the Nation, that seems like a large percentage—but in 1984, I believe we can do even better.

Second, we salute our Democratic Senators—those brave few who won in the difficult year of 1980; those 19 Democrats who won in the happy year of 1982; and all those who are in the Senate now, who are here tonight, and who will be sent back to the Senate in 1984. And in that election, we must and we will elect Democratic challengers as well—so we can return the Senate itself to a Democratic majority and Democratic principles.

Two years ago, when we started Democrats for the 1980's in the very shadow of the Reagan triumph, we were told our hopes were too high—that at best, we could try to hold a little ground against the inevitable advances of reactionaries and the new right. Now we know how wrong that pessimism was. We took our stand—and the people have turned to us.

But the success of the past year does not guarantee the victory of next year.

We need every resource of heart and every form of help each of us can give. The other side may outspend us—but they will never outwork us. That is the pledge and the commitment of Democrats for the 1980's.

Yet hard work by itself will not be enough.

We must also resolve that Democrats will offer fair and sensible alternatives to the unfair and insensitive policies of his administration. We must do more than oppose; we must propose a program for an economic recovery in which all our people have a fair share—and a more secure peace, where all the world will have a better chance for survival.

As all of you know, I was not born in this country or into the Democratic Party. I came to America by choice—and to the Democratic Party by conviction.

I am proud to belong to a Party which is not afraid to speak of compassion, to stand for nuclear arms control, and to demand that we live up to the best ideals of this greatest of Nations.

So let us renew our commitment to our cause.

Let us join in celebrating the Democratic victors of 1982—and in opening the way for a Democratic Senate, A Democratic Congress and a Democratic President in 1984.●

LINCOLN UNIVERSITY: A PRICELESS HERITAGE

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. CLAY. Mr. Speaker, Lincoln University has a rich and distinctive history in the life of the State of Missouri and our Nation.

It was founded as an institution of higher education in 1866 to provide for the academic and intellectual development of the sons and daughters of former slaves. Lincoln University, therefore, has a specialness in the very lifeblood of black Americans because it offers through the provision of academic and intellectual skills a conduit for black Americans to enter the socio-economic mainstream of American society.

To that extent, it is very dear and much cherished by black Americans. It is most important that this peculiar heritage of Lincoln University and its precious roots be maintained and extended in the present and future.

It should be noted as a matter of historical record that Lincoln University has always, as is true of other predominantly black colleges and universities—namely, Howard, Morgan, Talladega, Hampton, and so forth—founded during the same period, opened its doors to all races. Lincoln University must remain, in the present and future, a vital and creative part of black America.

In this connection, Mr. Speaker, I would like to share with my colleagues a position paper prepared by Dr. Willie J. Kimmons regarding the maintenance of the heritage of Lincoln University.

The paper follows:

MAINTAINING THE HISTORICAL HERITAGE AND INTEGRITY OF LINCOLN UNIVERSITY

(By Willie J. Kimmons)

According to Randolph Bracy, Jr., the major goal of Black institutions of higher learning is the development of strategies for preparing Black people with the essential skills to govern and compete in the Black Community and the American society. ("The Black Private College and Strategies for its Survival," Journal of Negro Education, Vol XLIX, No. 1, 1980.)

In 1866, shortly after the Civil War, a group of Black men had a vision and saw a need for a Black institution of higher learning in the Jefferson City, Missouri area. Because they had no financial backing they decided to contribute some of their own earnings. Thus in 1866, because members of the 62nd and the 65th colored infantries had a vision and decided to contribute from their personal earnins, Lincoln Institute was created. This dream encouraged by other individuals became a reality and on September 17, 1866 Lincoln opened its doors for the first time to Black students desiring a post-high school education. Twenty four years later, in 1890 the State of Missouri established Lincoln as a land-grant institution of higher learning. In 1921, this institution became Lincoln University.

Since its inception, this institution has broadened the horizons of thousands of Black young men and women by helping them to realize their potential to fulfill themselves, serve humanity, and stand-up in support of the dignity of all persons. The tradition upon which Lincoln University was founded, nurtured and developed must remain as strong and true today and tomorrow as it was yesterday.

According to Dennis Daily Murphy, one of the major goals of Black institutions is to provide creditable models for aspiring youth. He stresses the importance of young Black men and Black women seeing other Blacks managing important affairs and administering important enterprises. ("The Future of Predominantly Black Public Colleges and Universities," Urban Education, Vol. 16, No. 1, April, 1981.)

Faustine Jones emphasizes that since their founding, the worth of Black Colleges is very often substantiated by quantitative measures such as the number of graduates. From a quantitative perspective, most of the teachers, lawyers, physicians, social workers, and other Black professionals who have made significant contributions or who have attained outstanding social distinction are alumni of Black Colleges. ("In appreciation: The Worth of Black Colleges" Journal of Negro Education, Vol. 50, No. 3, 1981.)

One of the outstanding strengths of Lincoln University is the pride and commitment of its graduates. These graduates along with the faculty and staff are dedicated to advancing excellence in the liberal arts, in the professions, and technical careers. A few of its outstanding graduates are:

Mr. William Gillespie, National President, Lincoln University Alumni Association, Chesterfield, Missouri.

Mr. Paul Thornton, Assistant Director, Internal Revenue Service, Detroit Office, Detroit, Michigan.

Mr. Jesse Hill, Jr., President, The Atlanta Life Insurance Co., Atlanta, Georgia.

Mr. Thomas Shropshire, Vice President, Miller Brewery, Milwaukee, Wisconsin.

Dr. Henry Givens, President, Harris-Stowe College, St. Louis, Missouri.

Mr. Stanley Scott, Vice President, Phillip Morris, New York, New York.

Mrs. Barbara Vance, Staff Facilitator, College of Education, Wayne State University, Detroit, Michigan.

Dr. Lionel Newsome, President, Central State University, Wilberforce, Ohio.

Mr. Earl Wilson, Marketing Director for European Countries, I.B.M.

Dr. Queen Randall, President, El Centro Community College, Dallas, Texas.

Dr. Odell Nails, Superintendent, Pontiac Public Schools, Pontiac, Michigan.

Mr. Julius Hollis, Corporate Attorney, General Motors, Detroit, Michigan.

Dr. Roy Cheatham, Dean, St. Louis University, St. Louis, Missouri.

Lincoln University graduates have distinguished themselves across this nation. Lincoln has produced and will continue to produce some of the greatest role-models and image-builders this country has to offer. It has graduated some of the greatest minds that have competed and contributed at all levels and in every facet of American life. Indeed the Alumni Association is engaged in many exemplary efforts promoting excellence in education and in maintaining the University's historical integrity, personal, and professional growth throughout its local chapters in more than 20 cities across the United States of America. The Association will continue to support the mission and goals of the institution and will continue their dedication to educating Black students, to all young people, and to our nation.

Historically Black Universities such as Lincoln provide opportunities for Black men and women with advanced degrees to find positions to teach and administer in a more congenial and more comfortable settings. According to Andrew Billingsley, among the nation's more than three thousand predominantly white colleges and universities, less than one percent of the faculties are Black.

Upon careful examination and analysis, it can be determined that the historically Black Colleges are the only significant academic "home" for Black faculty and staff members. "Building Strong Faculties in Black Colleges" Journal of Negro Education, Vol. 51, No. 1, 1982.) Consequently a "home" such as Lincoln must remain and continue to be strong in principle and commitment, rich in tradition and culture, and Black.

This position does not intend to place Blacks and non-Blacks in adversarial roles. Lincoln University is one of the two institutions of higher learning in Missouri which was developed because the other institutions of higher education refused to accept Black students. Times have changed. The economy is tight. The population of Jefferson city is more than seventy-percent non-Black. Non-Black students have always attended Lincoln University. We welcome all students to our Historically Black University.

We realize we are in close proximity to major metropolitan cities with sizable Black and minority populations such as Kansas City, Missouri; East St. Louis, Illinois; Chicago, Illinois; Memphis, Tennessee; and St. Louis, Missouri. The young Black and minority youngsters in these cities need Lincoln University and Lincoln University needs them. We want to satisfy their educational, personal, and social needs.

Truly, it is unfortunate that at this point of history we find it necessary to defend the history, culture, and future of this University by asserting our position that the President of Lincoln University must be highly competent, highly qualified and Black. Nevertheless the alumni, faculty and staff, community, and political representatives are united in our efforts to preserve Lincoln University along with its tradition and heritage. This necessitates selecting a President from the cadre of excellent Black administrators and educators across this nation.●

H.R. 1733

HON. JAMES M. JEFFORDS

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. JEFFORDS. Mr. Speaker, today I am introducing a bill to amend title II of the Social Security Act to provide for timely notification of the Secretary of Health and Human Services by funeral homes or appropriate persons of any death. This bill—if enacted into law—will insure that the Social Security Administration (SSA) is able to stop benefit payments to a deceased person soon after death. The Social Security Administration will save over $100 million each year under the provisions of this bill. I would like to point out that it was through conversation with James A. Johnston, of Montpelier, Vt., that the importance of this type of legislation came to my attention.

Under the provisions of my bill within 3 days of the issuance of a death certificate, the person charged with disposition of a body must notify the SSA. This procedure would bring a $10 reimbursement from SSA to cover expenses of notification. If a person fails to notify the SSA four times, he or she will be subject to a $25 fine for each willful failure thereafter, after notification to do so. It is my sincere belief that funeral directors would comply to the fullest with this law even without the $10 reimbursement or the fine. However, those notifying SSA will be doing the country and the social security system a service for which they should be reimbursed.

The information supplied to SSA would not only save the old age and survivors trust fund millions of dollars, but it would be a step toward restoring faith in social security on the part of those who are disillusioned with the retirement program.

The system of notification in this bill would allow the Social Security Administration to share information about the death of Americans with Federal and State agencies that are responsible for the payment of other forms of benefits. In this way we will save millions of dollars in general revenues as well as in social security.

The text of this measure is printed below. We all recognize that corrections must be made in our social security system, and I hope that my colleagues will support this measure.

H.R. 1733

A bill to amend title II of the Social Security Act to provide for timely notification of the Secretary of Health and Human Services by funeral homes or other appropriate persons of deceased individuals' deaths

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 205 of the Social Security Act is amended by adding at the end thereof the following new subsection:

"REIMBURSEMENT FOR TIMELY NOTIFICATION OF DEATH

"(r)(1) Any funeral home or other person who disposes of the remains of any deceased individual as authorized by law shall be paid $10 by the Secretary from amounts available for administration of this Act if such funeral home or other person notifies the Secretary (in such form and manner as shall be prescribed by the Secretary) of such individual's death within 3 business days after the date of the official filing with a State (or a political subdivision of a State) of a death certificate (or equivalent document maintained by such State or subdivision) recording such death.

"(2) Upon determining that any person on at least four occasions has disposed of the remains of deceased individuals and that on each such occasion has failed to notify the Secretary of the individual's death in a manner which would have entitled such person to a payment provided for in paragraph (1), the Secretary shall notify such person in writing that subsequent failures may result in criminal fines. Any person who receives notice from the Secretary after four such failures pursuant to the preceding sentence and who thereafter disposes of the remains of one or more deceased individuals and knowingly and willfully fails to notify the Secretary of such individuals' deaths in the manner described in the preceding sentence shall be guilty of a misdemeanor for each such failure and upon conviction thereof shall be fined $25.

"(3) In the case of individuals with respect to whom benefits are provided by (or through) a Federal or State agency other than under this Act, the Secretary may provide, through a cooperative arrangement with such agency, for utilization of information obtained pursuant to this subsection with respect to such individuals if—

"(A) under such arrangement the agency provides reimbursement to the Secretary for the reasonable cost of carrying out such arrangement, and

"(B) such arrangement does not conflict with the duties of the Secretary in compiling information pursuant to this subsection.

"(4) For purposes of this subsection, the term 'State' includes the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and American Samoa.".●

TONGUE-TIED

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. SIMON. Mr. Speaker, the Reagan administration continues to cling to the notion that the only way to reduce its unprecedented deficit is to cut or eliminate domestic programs that most of our citizenry and much of the world would call vital.

So, while he plans to continue his enormous and frightening arms buildup, the President is proposing that the United States wipe out its meager international education program in the Department of Education. The program on which we rely to help train our diplomats, intelligence officers, and international businesspersons of the future.

As a result of his proposal, the international community is responding in disbelief. The United States, the recognized leader of the free world, proposes to cease its support for the advanced study of other cultures and languages.

I urge my colleagues to read the following article from the Economist, published in London, and then join with me in sending a clear message to the White House that we have no intention of following this pitiful suggestion to eliminate Federal support for the critical area of international education.

In 1776 such a move might be considered. In 1983 it is impossible to believe that Congress would seriously propose it.

The article follows:

[From the Economist, Feb. 12, 1983]

TONGUE-TIED

WASHINGTON, D.C.—In the grand numbers war of the federal budget, the inclusion (or exclusion) of a $26m item can easily pass unnoticed. That is perhaps what the administration hoped would happen when it tried to delete a line from the fiscal 1984 budget

for the department of education. The international studies programme, which identifies "national resource centres" at American universities and then gives them grants to encourage the study of foreign languages, cultures and political systems, was the intended casualty. But the academic, business and defence communities have caught on more quickly than they were supposed to, and they have begun a battle that may well end in a budget increase rather than a cut.

Responsibility for education is constitutionally reserved to the states in the American federal system. But in 1958, soon after Sputnik had thrown Americans into a panic about the quality of public education, congress passed the National Defence Education Act, which began formal federal sponsorship of, and some financing for, the study of international affairs. In some cases, the grants went to already well-endowed institutions, such as Harvard or Stanford, to improve existing courses and libraries; in other cases, truly needy state universities were the beneficiaries. It became possible to pursue Soviet studies in Ann Arbor, to learn excellent Chinese or Japanese in Seattle and to follow African affairs in Bloomington, Indiana. The federal expenditure came to be regarded as a good investment, if only because many of the international studies graduates joined the foreign service, went to work at the Pentagon, found jobs in one of the intelligence agencies or helped to sell American goods abroad.

The progress in the "international literacy" of Americans, as the experts call it, was still not great. The president's commission on foreign language and international studies reported in 1979 that, as American responsibilities and interests abroad had expanded, the pool of people genuinely qualified to manage them had shrunk. When Islamic militants, that very year, took over the American embassy in Teheran, its staff could not even understand their slogans; only three of the famous hostages spoke Farsi.

Ever since the 1979 report, there have been efforts in congress and on the campuses to extend the international studies programme to more languages and other areas. The argument was that if the federal government continued to show an interest then it would be easier to bring in funds from foundations, corporations and other donors. But Mr. Reagan's budget writers, arguing that most of the universities receiving the grants did not really need them or could probably raise the money elsewhere, decided that this was an easy and obvious place to achieve savings.

Mr. Bobby Inman, the retired admiral who once ran the National Security Agency (which employs many linguists), was one of the first to criticise the plan. International studies, he said, are "a national security issue". Admiral Inman predicted that a cut in this area would inhibit Mr. Reagan's much vaunted effort to rebuild the American intelligence effort. Business groups such as the Council of the Americas said they would have a hard time persuading their members to give to university departments if the government did not lead the way.

Few congressmen in either party seem included to support the president on this issue. Indeed, international studies suddenly rank with motherhood and apple pie on the political agenda. As a lobbyist from the American Council of Education put it, "We're really lucky they want to destroy the programme completely. A small cut might have seemed reasonable. This way, we might actually get a big increase." And so it goes on one small front of the budget battle.●

DEFENSE: THE PROCUREMENT PROBLEM

HON. MARGE ROUKEMA

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mrs. ROUKEMA. Mr. Speaker, surely the projected Federal budget deficits over the next few years are as disturbing to you as they are to us. These deficits threaten to reverse the economic recovery now underway, one we have all labored so hard to achieve. It is imperative that we take the necessary steps to reduce these imminent deficits, not just for fiscal 1984 but, even more importantly, for future years.

The structure of Federal spending must be changed. In the same way we have resolved to reduce long-term commitments in Federal entitlements programs by structural reform, we must restructure the anticipated spending levels for defense acquisitions by realistically setting defense priorities. We must have a realistic and coherent defense strategy or face the consequences—confiscatory taxes, unacceptably high deficits, or both.

No more obvious proof of this need exists than the strong trends of public opinion that evidence rapid erosion of public confidence and support for a defense buildup. The mandate for a stronger defense, evidenced so convincingly in November of 1980, has enabled us to increase the defense portion of the Fedeal budget from 23 percent to 26.7 percent. Yet we are in danger of losing this consensus for a steady and sustained buildup in our national defense, largely because no convincing strategy has been produced to justify the expolsive growth in defense expenditures. Too frequently the message is buy more of everything.

What course then can be taken to realistically plan ahead within realistic budgetary parameters? Here the facts are revealing and persuasive:

If no change is made in the current federal budgetary policy we will add $1,159 billion to the federal deficit between fiscal 1984 and fiscal 1988. During this period the President is proposing a $1,593 billion defense plan.

We have gone far beyond President Reagan's pledge, to the American people in the 1980 campaign, of a 5 percent real growth rate in yearly defense spending. The President's program doubles this in fiscal 1984, with a requested increase of 10.2 percent real growth in budget authority. Over the period 1981-1988 the President's current plans will increase the defense budget an average of 8 percent yearly in real growth.

Since President Reagan took office we have increased yearly defense spending $51.3 billion or 33 percent and by 1988 spending increase another $188 billion or an additional 75 percent.

Between fiscal 1980 and 1984 spending on procurement will nearly triple from $35 billion to $94 billion. The President's recent five year plan nearly doubles procurement again between 1984 and 1988, from $94 to $170 billion. Presently, 29 percent of our defense budget goes to procurement, but by 1988 it will balloon to 39 percent.

In contrast, operations and maintenance, the very heart of our readiness capability, will drop from 33 percent of our defense budget in 1980 to 26 percent in 1984. The President's plan calls for an increase of only 50 percent, from $74 billion in 1984 to $112 billion in 1988. Operations and maintenance will still be 26 percent of our defense budget in 1988.

It is obvious that the reductions in the planned military buildup will have to occur in the area of procurement. If we cannot control the procurement bulge, we may all be limiting future choices with regard to our conventional forces. In the past, we have been too willing to cut in the critical areas of military personnel and operations and maintenance to achieve illusory short-term savings. With the pressures of persistent large deficits in future years, it will be all to easy to again find immediate savings in our "readiness" accounts. Consequently, our planes will sit in their hangars, our ships will lay at anchor, our tanks will remain idle because they are in need of repair or we do not have the trained personnel to man them. The decisions made today on major investment programs will determine the amount of this idleness that will occur tomorrow.

We have a solemn obligation to work for fiscal responsibility and a nation which is strong at home and abroad. This obligation demands that we urge the administration to demonstrate the leadership necessary for its fulfillment. Outside of the Congress the momentum for this change continues to build. The cover of Time magazine, discussions in the Business Roundtable, and the report of the National Governor's Conference all agree. We cannot allow defense spending to increase by 10 percent. The economy cannot accommodate such a jump and the American people will not tolerate such reckless growth. If we do not begin now, events will overtake us, and we will bear the burden and the blame for the consequences of our inaction and failure of leadership. Therefore, I call upon my Republican colleagues to join me in seeking Secretary Weinberger's leadership and cooperation in this task.●

MODIFIED DAIRY PRICE SUPPORT PROGRAM

HON. WYCHE FOWLER, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. FOWLER. Mr. Speaker, I introduced the modified dairy price support program on February 23, 1983. This legislation would correct serious problems facing the dairy industry, the taxpayers, and America's milk consumers. The text of the legislation reads as follows:

H.R. 1604

A bill to amend the dairy price support program

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. This Act may be cited as the "Modified Dairy Price Support Program."

SEC. 2. Section 101 of the Omnibus Budget Reconciliation Act of 1982 is hereby repealed.

SEC. 3. Subsection (c) of Section 201 of the Agriculture Act of 1949, as amended, is amended as follows:

"(c)(1) Effective for the period beginning April 1, 1983 and ending September 30, 1984—

"(A) The price of milk containing 3.67 per centum milk fat shall be supported at $12.10 per hundredweight.

"(B) On the basis of calculations made every three months, the Secretary shall increase the support price 50 cents per hundredweight whenever Commodity Credit Corporation (CCC) purchases are estimated to be below 7.5 billion pounds milk equivalent during the next twelve months and increase the support price $1.00 per hundredweight whenever CCC purchases are estimated to be below 5 billion pounds milk equivalent during the next twelve months.

"(2) Effective October 1, 1984 the price of milk shall be supported at a level not in excess of 83 per centum nor less than 61 per centum of the parity price therefor as follows: if the Secretary estimates the purchases of milk or the products of milk by the Commodity Credit Corporation for the forthcoming fiscal year to be less than 2 billion pounds milk equivalent, the price of milk shall be supported at 83 per centum of the parity price; if the estimate for purchases is 2 billion pounds milk equivalent or more, but less than 3 billion pounds, the price of milk shall be supported at 79 per centum of the parity price; if the estimate for purchases is 3 billion pounds milk equivalent or more, but less than 4 billion pounds, the price of milk shall be supported at 75 per centum of the parity price; if the estimate for purchases is 4 billion pounds milk equivalent or more, but less than 5 billion pounds, the price of milk shall be supported at 71 per centum of the parity price; if the estimate for purchases is 5 billion pounds milk equivalent or more, but less than 6 billion pounds, the price of milk shall be supported at 68 per centum of the parity price; if the estimate for purchases is 6 billion pounds milk equivalent or more, but less than 7 billion pounds, the price of milk shall be supported at 65 per centum of the parity price; if the estimate for purchases is 7 billion pounds milk equivalent or more, but less than 9 billion pounds, the price of milk shall be supported at 63 per centum of the parity price; if the estimate for purchases is 9 billion pounds milk equivalent or more, but less than 11 billion pounds, the price of milk shall be supported at 62 per centum of the parity price; and if the estimate for purchases is 11 billion pounds milk equivalent or more, the price of milk shall be supported at 61 per centum of the parity price.

"(3) The price of milk shall be supported through the purchase of milk and the products of milk."

SEC. 4. Class I milk prices for all marketing agreements and orders shall be established at not less than $12.56 plus the differential set forth in each order per hundredweight for milk containing 3.5% milk fat. This section shall be effective April 1, 1983 or upon enactment.

SEC. 5. Notwithstanding any other provision of law, any money that may have been paid to the Commodity Credit Corporation pursuant to Sec. 101 of the Omnibus Reconciliation Act of 1982 shall be remitted by the Secretary.●

THE BOLD NEW CITY OF THE SOUTH

HON. BILL CHAPPELL, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. CHAPPELL. Mr. Speaker, recently I had occasion to sit with Mayor Jake Godbold of the city of Jacksonville, Fla., a considerable portion of which lies within the Fourth Congressional District.

Mr. Godbold has consistently made efforts in behalf of his city in securing assistance, interest, business participation, expansion of recognition, and definition of community goals and objectives. He has been untiring in his pursuit of excellence.

Yesterday, during a conversation with a delegation from the Jacksonville Chamber of Commerce, the subject of the uniquely close relationship between government and the private sector in the city of Jacksonville was broached. In these days when we work so diligently to assist our constituent communities in posturing for the future, it is a pleasure to note that an individual leader has welded such strong and lasting ties as has been the case in Jacksonville, Fla.

Perhaps there are other leaders throughout this great Nation who may look to the example set by Mayor Jake Godbold and the city of Jacksonville, Fla. in establishing a similar working partnership, a marriage of effort, a team of "can do" oriented members.

I wish to commend the government and industrial leadership of Jacksonville on their splendid achievement and, in particular, Mayor Jake Godbold, for his personal leadership initiative in bringing this union of community interests and government objectives into a productive and viable focus. Indeed, Mayor Godbold epitomizes the very best in the city's motto—"The bold new city of the South".●

1983 DISTRICT DISTINGUISHED SERVICE AWARDS

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. BENNETT. Mr. Speaker, recently I had the honor of announcing seven 1983 recipients of the Florida congressional delegation's Distinguished Service Awards for the Third Congressional District. The seven were recommended by an awards panel of community leaders in private sector initiatives and volunteer work. The awards recipients are being honored as a part of the Florida congressional delegation's private sector initiatives program which the delegation adopted last August.

The goals of the Florida delegation's program include encouraging the private sector in each congressional district to take a more active role in solving community problems, giving official recognition and awards to models of successful private initiatives, and encouraging programs and individuals which stimulate the use of volunteers to address community needs.

The seven recipients are, in alphabetical order:

Jacksonville Area Chamber of Commerce, Edward Waters College Task Force, Richard Suddath, chairman: Provided management assistance to help a local college. A business team from the chamber has been working with the college to improve overall financial management.

Jacksonville Percent Club, Jacksonville Chamber of Commerce, Guy Botts and Robert T. Shircliff, cochairmen: Represents a long-range project which will have far-reaching positive effects over many years. The Percent Club encourages local corporations to take an active part in philanthropy. All of the 81 corporate members have certified through a signed affidavit that they gave either 2 percent or more, or 5 percent or more of their pretax earnings to charity during that year. The Jacksonville Percent Club is the first of its kind in Florida.

Sexual Assault Treatment Center, Mrs. Pat Hannan, chairperson: Represents an innovative project led by a volunteer who raised the capital from the private sector. Mrs. Hannan, a member of the mayor's Commission on the Status of Women, has been the driving force behind the funding and establishment of the center and of an education and awareness program in the schools.

Southeast Bank, Franklin Arms Corporate Volunteer Program: Represents a company's involvement. Southeast

Bank executives met with officials of the city and of Volunteer Jacksonville, the umbrella volunteer organization, to determine where their employees could be most effective. Based on these recommendations, Southeast Bank employees adopted the Franklin Arms Retirement Home. They have developed an ongoing relationship with the residents which has or will include social events, refurbishing facilities, and a Christmas celebration with the tenants.

Telephone Pioneers, Retirement Home Adoption: Represents an employee association's involvement. The association pledged to "reach out and touch" to provide hands on support and assistance to the residents of the Twin Towers Retirement Home. Some 425 volunteers refurbished the facilities, conducted social events for the residents, and started a library through a major book drive. The program was so successful that it is being expanded to other Florida cities.

Judge Gerald Tjoflat, Boy Scouts of America, North Florida Council: Represents traditional voluntarism. Judge Tjoflat is the president of the North Florida Council of the Boy Scouts of America. He believes that Scouting allows children to develop "the strength of character to resist the awesome pressure that peer groups put on them to use drugs, peddle drugs, and engage in crime." The number of Boy Scouts in the North Florida Council has risen by over 50 percent in the last few years under Judge Tjoflat's leadership. The judge also has a program to involve felony youth offenders in Scouting, the first of its kind in the United States.

WJXT-TV 4, Wednesday's Child: Represents an excellent way of using media resources for the benefit of the city. This series focuses on one child per week by identifying his or her needs and interests in regard to adult friendship to help eliminate the waiting list of boys and girls needing a Big Brother or Big Sister. It has enhanced community awareness of the Big Brother/Big Sister program and the plight of the single parent, and has increased the number of matches of child and adult.

Looking over the broad array of philanthropic work being done in Jacksonville and the willingness of the people of Jacksonville to come together for the good of the community is obvious and outstanding. All the nominations showed a wonderful sense of what a community can do for itself. All those who were named and all those who continue to work unselfishly as volunteers in the public interest, even though unrecognized, are truly the strength of America.●

SOCIAL SECURITY BENEFITS

HON. KENT HANCE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. HANCE. Mr. Speaker, everywhere I travel in my district. I hear the same question from senior citizens: Is Congress going to reduce my social security benefits? Social security represents the primary source of income for 90 percent of our senior citizens. There is great concern out there among social security recipients that Congress, in its haste to shore up the system, will place undue burdens upon current beneficiaries. We must not allow this to happen. We, as an elected, representative body, have an obligation to these people to protect their benefits. Yes, social security needs to be reformed; yes, let's put the system back on its feet. But let's not do it by taking away or reducing the benefits from those who have come to depend on their monthly benefit checks.

To this end, I have introduced a resolution today that would make it the sense of the House that no current recipient of social security would experience a reduction in the amount of money now received in his or her basic monthly social security check. The intent of Congress in reforming the Social Security System is to stabilize it for future generations of beneficiaries. It is not the intent of Congress in any way to reduce the monthly benefit checks of current recipients in order to achieve financial solvency for the system. People on social security deserve to continue receiving at least the amount they currently receive without fear of having that amount cut.

Mr. Speaker, I urge Members of this body to embrace my resolution and in doing so, tell the senior citizens of this Nation that we do not intend to make them the scapegoats for the tough decisions we face on social security reform.●

STOPPING TRADE IN STOLEN CARS

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. STARK. Mr. Speaker, in the 97th Congress, my colleague Mr. GREEN introduced the Motor Vehicle Theft Law Enforcement Act of 1981—H.R. 4325. As a cosponsor of this bill, I was very dismayed to see this excellent and all-encompassing bill assigned to five different committees. No action was taken in the last Congress, in part because of the complexity of the multiple committee assignments. Consequently, I would like to introduce in the 98th Congress one section of this bill in order that it may be referred to just one committee, and thus this worthwhile section may be more susceptible to early enactment. This should help to expedite the passing of the rest of the legislation by simplifying some committee jurisdiction issues.

The title which I speak of, and which I am introducing as a separate bill, concerns the importation and exportation measures designed to help combat the tremendous problem involving the exportation of stolen cars.

Stop for a moment and consider the following figures: One million motor vehicle thefts are reported annually. The cost of these thefts to the public is over $4 billion. Every 28 seconds a motor vehicle is stolen in the United States. Four out of every ten cars stolen are never located. With figures like these, how can we continue to ignore the exorbitant problems relating to auto theft?

These stolen cars are not just going to "chop shops" to be dismantled and resold, but they are also being exported to a variety of countries in tremendous quantities. Estimates of the annual number of exported stolen cars range from 25,000 to 200,000.

It is estimated that 20,000 stolen vehicles are annually taken to Mexico along. U.S. Customs Service officers who patrol the docks in Newark and Elizabeth, N.J., recovered more than $1 million worth of stolen cars destined for overseas in just 1 year. Between the United States and Mexico, border crossings have become unchecked thoroughfares for the transport and sale of stolen vehicles. Law enforcement authorities report that "This open-door policy has given the criminals the idea that there are minimal risks to be taken and high profits to be gained in the disposal of stolen goods across the United States-Mexican border."

We must begin to take stronger precautionary measures. We must give customs agents more power. Federal authorities need to be able to control illegal exportation more effectively. We must, as H.R. 4325 proposed, require shippers to record the vehicle identification number (VIN) and file and export declaration with Customs before exporting.

This bill would make it a Federal offense to import or export, or attempt to import or export, stolen self-propelled vehicles, aircraft, or their parts, with knowledge that the vehicle or part was stolen. It also prohibits the importation or exportation of vehicles or parts whose identification number the importer or exporter knows to have been removed, obliterated, tampered with, or altered. These offenses would be punishable by a fine of up to $10,000, up to 5 years imprisonment, or both.

Under current law, a thief in the United States has little trouble exporting a car. All he or she has to do is drive to the docks, say he or she wants to ship it, and pay the freight charge. There is no verification of the legality of the car. In the normal course of business, U.S. Customs never looks at a car being exported. Why? Because the problem is not considered a high priority at Customs, which has its hands full with existing statutory requirements. Until we pass legislation that toughens the security and the penalties, the export market for stolen cars will continue to increase at astounding rates. We must fight to bring the rate of stolen vehicles down.

I urge my colleagues to join me in my drive to put a stop to the flow of vehicles and parts out of the country.●

DECLINING OIL PRICES: GOOD ECONOMIC MEDICINE

HON. TOM CORCORAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1983

● Mr. CORCORAN. Mr. Speaker, it is absolutely amazing to me that anyone would actually complain about lower oil prices or, even more incredibly, try to tag Saudi Arabia with the credit for bringing them down.

Competition from other sellers with other interests hand-in-hand with the high degree of conservation from our consumers is what has precipitated the recent fall in oil prices.

I am delighted that oil prices are coming down. To all the consumers in America who invested in conservation out of their own commonsense: Congratulations. We won. OPEC lost.

Now some may ask if the price of oil would not be able to shoot skyward again. Will we not, the cynics say, just find ourselves back in dependency again? I do not think so. The reason is that the amount of energy it takes to produce a given unit of gross national product has declined each year for the last 10 years and will continue to decline. Our economy has learned to live with the changes in oil prices and has become far more efficient in its use of energy. I call this permanent conservation.

I agree with Morgan Guaranty Bank which, in their February report, says that lower oil prices are very good news—a stimulative of the best sort to the economy. According to Morgan Guaranty, for every $5-per-barrel reduction in oil prices, our consumers save some $27 billion per year. Now there is a banker who is interested not just in the loans it may have made to oil producers, or perhaps even to makers of exotic oil substitutes, but also in the ecomomic well-being of our economy as a whole. There are, after all, a great many more lenders and borrowers who will be better off with lower oil prices. The bank concludes that lower oil prices, as they help to bring inflation down, may also contribute to lowering interest rates. "If that happened, the effect would be a major economic stimulant," the report stated.

Mr. Speaker, let me be one to state my encouragement for lower oil prices. Let others complain about the reduction in price. And, again, congratulations are, indeed, in order for all American energy producers and consumers who helped bring the price down. Let us keep up the good work.

Mr. Speaker, for the benefit of our colleagues, I would like to insert in the RECORD at this point the text of the February Morgan Guaranty Trust Co. report, regarding lower oil prices and their impact.

LOWER OIL PRICES: IMPACT ON UNITED STATES

The failure of OPEC to reach an agreement on production and pricing has resulted in a further drop in spot-market oil prices and in the official prices of a number of non-OPEC producers, including Egypt and the Soviet Union. The general expectation now is that official OPEC prices will fall in coming weeks.

Surprisingly, a debate has arisen as to whether or not an oil price decline is a good or a bad thing. At one level the answer depends entirely on where you stand: if you produce oil it's bad, if you consume oil it's good. At a more basic level, however, an oil price decline is beneficial for the U.S. economy and for the vast majority of Americans.

The oil-price increases of the 1970s were basically a symptom of a constraint faced by the economy. To the extent that the supply of and the demand for oil were relatively insensitive to its price, a limit on the supply of oil could impose a constraint on output—or, at the very least, would mean that very large amounts of resources would have to be used to overcome the limitation on oil supply.

The goods news in the recent decline in oil prices is that oil supply and demand are not as inelastic as had been thought. The supply of oil from countries outside of OPEC has risen steadily in recent years and demand has contracted sharply in response to higher prices (as well as the recession). These responses are, of course, one factor putting downward pressure on oil prices. More fundamentally, they mean that oil is not likely to be a constraint on economic growth in coming years.

A point to remember in analyzing the impact of lower prices is that prices have been falling for two years. The cost of foreign crude to U.S. refiners peaked at close to $39/bbl in early 1981 and by the end of 1982 had fallen to $33/bbl. If the impact of general inflation is taken into account, the decline has been even sharper. In real terms, the price of crude doubled between late 1978 and early 1981. Since then, close to half of that rise has been erased.

Most forecasts of oil prices for 1983 are in the $25/bbl-to-$30/bbl range. If average prices were to dip to $30/bbl, it would represent a continuation of the rate of decline experienced over the past two years. If prices break to $25, however, that would represent a significant increase in the rate of decline. Wholesale prices of oil products in the U.S. have already fallen to a level consistent with crude at somewhere near $27/bbl. Consequently, if crude prices hold at $30/bbl, product prices would actually rise, and a drop to $25/bbl would only push wholesale product prices down modestly.

A $5 DROP?

What if oil prices drop $5 a barrel? Here are some of the effects on the U.S. economy:

Incomes. A $5/bbl drop in the price of oil would save oil users in the U.S. $27 billion per year. Most of this saving would accrue to consumers directly through lower costs for gasoline and home heating oil. There would also be some indirect benefits as businesses passed through part of their savings in lower prices. Of the $27-billion gain to consumers, about $8 billion would come at the expense of foreign oil producers. The remaining $19 billion would represent, initially, a decline in the income of domestic producers. Something like 70 percent of this ($13 billion), however, would be offset by lower windfall profit, income, and severance taxes. Thus the biggest losers in an oil price decline are likely to be federal, state, and local governments.

Inflation. The direct impact of a $5/bbl (12¢ per gallon) drop in oil prices would be to reduce the consumer price index by 0.6% in 1983. In addition, however, the index would benefit from lower prices for goods and services, such as air travel, that use large quantities of oil. This indirect impact might reduce the CPI a futher 0.2% or 0.3%. the initial reduction in inflation, furthermore, would tend to lead to additional improvement through its influence on wage rates. This would happen automatically through reduced cost-of-living escalation under labor contracts and as decisions by nonunion employers began to reflect the better inflation performance. All told, a $5/bbl drop in the oil price might lower the CPI by 1% within a year.

Trade balance. With net oil imports running at a rate of approximately 4.5 million barrels per day, a $5 drop in the price of oil would reduce the trade deficit by $8 billion.

Real output. Lower oil prices would have two immediate effects on demand for goods and services. They would boost consumer spending through sizable additions to consumer purchasing power. They also, however, would reduce energy investment as oil industry profits fell and the expected returns from energy exploration declined. Whether the net result would be positive or negative is not clear.

A second impact from lower oil prices on demand is possible through monetary policy. With inflation lower, the monetary authorities might well have more latitude to bring interest rates down. If that happened, the effect would be a major economic stimulant.●

SENATE—*Wednesday, March 2, 1983*

(Legislative day of Wednesday, February 23, 1983)

The Senate met at 10:30 a.m., on the expiration of the recess, and was called to order by the President pro tempore (Mr. THURMOND).

PRAYER

The Chaplain, the Reverend Richard C. Halverson, D.D., offered the following prayer:

Let us pray.

Our Father in Heaven, we are grateful for the effective way Senate procedure operated yesterday. We thank Thee that a bill which threatened to involve long, emotional debate was resolved in a demonstration of reason, good will, and harmony. Thank Thee, Lord, that, despite strong disagreement, generous expressions of honor, which defuse a divisive and destructive spirit, were spoken.

As busyness, pressure and strain increase, grant, dear Lord, that the spirit of love and good will, of unity and honor may persist. Especially do we remember our families in prayer. As calendars demand more and more hours every day, help the Senators to keep faith with prior commitment to spouse and children. Help us to see that nobody wins, whatever the political victory, if marriage and family are sacrificed in the process. We pray this in the name of Him who commanded, "Therefore a man shall leave his father and mother, and cleave unto his wife and they shall be one flesh." (Genesis 2: 24 RSV) Amen.

RECOGNITION OF THE MAJORITY LEADER

The PRESIDENT pro tempore. The majority leader is recognized.

Mr. BAKER. I thank the Chair.

APPRECIATION FOR THE CHAPLAIN'S PRAYER

Mr. BAKER. Mr. President, I once again wish to acknowledge my appreciation of the Chaplain's prayer today. I suppose it may sound facetious to say that I am happy that the Chaplain feels inclined to commend to the Lord the action of the Senate in avoiding a filibuster. I do not think that is an excessive attention by the Diety to the affairs of this Nation. I was so grateful for it that I may have uttered such a prayer silently myself.

But, seriously, I commend the Chaplain for the relevancy and the topical nature of the prayers and the originality of the prayers that he offers from time to time. They are, indeed, Senate prayers and I congratulate him for that.

SENATOR WALLOP'S DISTINGUISHED SERVICE ON THE SELECT COMMITTEE ON ETHICS

Mr. BAKER. Mr. President, In the past few months, I have had the opportunity to informally discuss with several of my colleagues a matter of critical importance to this institution, and I would like to use this occasion to speak publicly about the role of the Senate's Select Committee on Ethics during the 97th Congress, and in particular, the role of its chairman during that period, the distinguished Senator from Wyoming, Senator WALLOP.

The Select Committee on Ethics is the only committee of the Senate which is completely bipartisan. The chairmanship of the committee is usually a 1 year term of service. At the end of the first session of the 97th Congress, after serving 1 year as vice chairman, and the following year as chairman, I asked Senator WALLOP to continue for another year in the post. It is a decision that I was glad I made. In the months to come, under Senator WALLOP, and with the assistance of Vice Chairman Senator HEFLIN, the Select Committee on Ethics compiled an impressive record or achievements, and provided a balanced and nonpolitical forum for one of the most arduous episodes in Senate history.

Senator WALLOP was most determined that the committee would operate to protect the public interest and to protect the Senate as an institution. In both regards, he was most successful.

During the trial of former Senator Harrison Williams, Senator WALLOP operated devotedly and with distinction in bringing the matter before the Senate and in attempting to safeguard the rights of all concerned. When the Justice Department began to collect evidence, and when the criminal trial was completed, Senator WALLOP and the Ethics Committee began their own investigation.

Later, counsel for Senator Williams would describe those proceedings under Chairman WALLOP as "eminently fair."

Obviously no Senator enjoys the thought of passing judgment on a colleague. The task is a thankless one: It is exhausting and frought with emotional and professional considerations that appear rarely in the course of other legislative business. But the committee proceeded, acting with patience and persistence, completing the inquiry and presenting the case forcefully and fairly to the Senate. As the tense debate on expulsion began, it was clear to the Senate, and to the people of this country, that the committee had fulfilled its responsibility in preserving the reputation of this body.

The Williams episode was not the only business that the committee was charged with during the 97th Congress, and I am not sure that even my colleagues are aware of the time required to be an effective chairman of the Ethics Committee.

In the last Congress, the committee, in addition to its legislative responsibility, handled 657 ruling requests seeking committee guidance on the applicability of Senate rules and regulations with respect to the actions of Senators and staff. Most of the requests were resolved by Senator WALLOP and Vice Chairman HEFFLIN, but they required that volumes and volumes of detailed memorandum be prepared by the nonpartisan committee staff, and analyzed by its chairmen.

I have stated before, both publicly and privately, that the Senate and the Nation owe a great deal to Senator WALLOP for serving as chairman, and I will only add at this time that I am most grateful that he was so willing and so able to assume such a responsibility. I am convinced that this institution is better off because of the committee's efforts.

I would say to my good friend from Alaska, the distinguished assistant minority leader, Senator STEVENS, who is the new chairman of the Select Committee on Ethics that the responsibility he is assuming is not an easy one, but I know that he will be aided by the able vice chairman, Senator HEFFLIN, as well as Senator HELMS, Senator PRYOR, and Senator EAGLETON, who have served on the committee with distinction, and Senator DURENBERGER, who while new to the committee, has shown dedication to the Senate and to the ideals and standards the committee has nurtured and is charged with protecting. Finally, I say to my good friend from Wyoming, Senator WALLOP, that on behalf of all your colleagues, I want to thank you for a term of service that is perhaps unparalleled, and certainly most distinguished—a job well done, in a manner

befitting the dignity and highest values of this institution.

SENATE SCHEDULE

Mr. BAKER. Mr. President, today, after the two leaders have used or yielded back the time allocated to them under the standing order, the distinguished Senator from Mississippi, Senator STENNIS, will be recognized. After, that, Mr. President, if there is time remaining, and I expect there will be some time remaining, although brief, there will be a period for the transaction of routine morning business to extend not past the hour of 11 a.m.

SENATE RESOLUTION 76

At 11 a.m., under the order previously entered, the Senate will turn to the consideration of Senate Resolution 76, which is the resolution on committee budgets reported by the Rules Committee.

Once again, I express my appreciation to the minority leader for permitting us to do that today. It requires his consent to do it because it requires unanimous consent to waive the 3-day rule and the 1-day rule in order to reach that measure. But, had we not done that, there really would not have been much we could do today. That is an adjunct to the very successful conclusion of the shipping bill before the leadership had anticipated we would do so. But I am grateful for that.

Mr. President, it was ordered that no nongermane amendments would be in order to the Rules Committee resolution on committee budgets and no unanimous consent would be granted, absent most extraordinary circumstances, to qualify any amendment that is not directly relevant to the resolution.

ORDER FOR ADJOURNMENT ON THURSDAY UNTIL MONDAY

Mr. President, I entered an order yesterday providing that on Thursday the Senate would recess over until Monday. Mr. President, I wish to change that and I now ask unanimous consent, under the same terms and conditions, that on Thursday, instead of recess, the Senate adjourn until Monday. I put that request at this time, Mr. President.

The PRESIDENT pro tempore. Without objection, it is so ordered.

MONTREAL PROTOCOLS AND JOBS BILL

Mr. BAKER. Mr. President, next week, beginning on Monday, we will take up the Montreal protocols under an agreement already entered and the vote on that will occur on Tuesday. It is the hope of the leadership that we can take up the jobs bill next week. It is expected to be a part of the urgent supplemental appropriations request.

Mr. President, I do not expect today to be a late today, nor, indeed, will tomorrow be a late day. There will be votes today and tomorrow, however. I expect that there probably will be a vote on the Rules Committee resolution and tomorrow we have an order on a treaty vote.

I hope, Mr. President, that it might be possible to take up the Tambs nomination tomorrow. That is not yet cleared, but if the minority leader would advise me on that, I will have a further statement or request to make later in the day.

Mr. President, I have no further need for my time under the standing order and I yield it to the control of the minority leader.

Mr. BYRD. I thank the majority leader.

RECOGNITION OF THE MINORITY LEADER

The PRESIDENT pro tempore. The minority leader is recognized.

S. 647—FAIR TRADE ACT OF 1983

Mr. BYRD. Mr. President, today I am introducing the Fair Trade Act of 1983. I can think of no time in all my years in the Senate when the American economy has been in such a critical state. While the President may see clear signs that we are on the mend, the people of my State of West Virginia, facing unemployment and mortgage foreclosures, have a different perspective. And it is a sober and depressing one at best.

When I introduced an identical bill, S. 2603, last May, many people were more optimistic than I that this administration's economic policies might somehow lead us to a light at the end of this tunnel of economic despair. We have all seen, however, just the opposite in the past 9 months.

In May, our national trade deficit stood at $7.05 billion for the third quarter of the fiscal year. At the end of the first quarter of the current fiscal year, the deficit had reached $12.79 billion and the trend is up.

Hard times are back in West Virginia too, the hardest since the 1930's.

The unemployment rate, 17.8 percent in December, is the highest and worst in the Nation.

Some counties, particularly those producing metallurgical coal, a raw material for steel, have unemployment rates of over 30 percent. And the State, overall, lost more than 36,000 jobs last year.

This makes the latest national unemployment rate and numbers, at 10.4 percent and 11.4 million, the highest since the Great Depression, look positively hopeful, by comparison.

In fact, the slight decrease of fourtenths of a percent in the unemployment rate from December to January reflects the sad reality that over half a million Americans have given up their search for jobs.

In May, the primary metals industry in West Virginia employed 17,300 workers. By December, the industry employment levels had dropped to 14,300, a drop of over 23 percent and a loss of 4,000 jobs in less than 1 year.

Our fabricated metals industry did no better. During 1982, it lost 1,500 jobs, down almost 20 percent from 7,900 to 6,400 workers employed.

And yet, the administration tells us we are on the mend. It points to lower inflation and interest rates—which independent economists point out are actually symptomatic of the continuing underlying weakness in our economy rather than of its improving health—and cautions us to be patient. But even its attitude of benign neglect toward economic problems has changed in recent weeks to concern over at least one element of our difficulties—our chronic trade problems.

Just last week, the U.S. Trade Representative rejected a complaint by the American steel industry against the export practices of the Japanese steel industry. The complaint alleged that the Japanese were benefiting from an agreement with the common market countries that the Japanese would send steel that would otherwise go to Western Europe to the United States instead. Trade Representative William Brock had this problem on his agenda when he was in Japan 2 weeks ago. But all he came back with was what he went with—a promise that the Japanese would closely monitor the amount of steel Japanese firms would send to the United States.

I suppose that would only take a minute or so to open a book. I am sure the Japanese keep careful records of how much steel they are importing into the United States. So, monitoring seems to me to have been no accomplishment at all, just a promise that the Japanese would closely monitor the amount of steel Japanese firms would send to the United States.

But it does not help the United States, nor does it help the steel industry, nor does it help the people who are working in that industry.

I am concerned that the Japanese might actually export additional steel to the United States in 1983, partially filling the void created by the European voluntary export agreement negotiated last year. The Trade Representative brought back no commitment to the contrary. That development is the last thing the American steel industry needs today. The economic security of tens of thousands of West Virginians whose livelihoods depend on steel, would be helped if our trade negotiators began to talk tough with the Japanese and the Europeans. Their exports come into our incredibly open markets and compete with the benefit of subsidies, government-backed credits, and government-financed research

and development programs our own industries do not enjoy. This situation cannot go on forever.

Pressures are growing in the Congress and in the country at large for this administration to take positive action to deal with these problems and quickly. Some would justify taking unilateral action on trade simply because imported goods compete with American industry and agriculture. That is not my complaint and that is not the approach of my bill.

No American producer likes the fact that the goods of other countries compete in our markets and our consumers sometimes choose to buy them rather than American products. But we must also recognize that fair competition among the world's economies is a necessary ingredient in our economic health. If others are to buy our products, they must be able to sell us theirs in order to earn the dollars we want them to spend here. Fair competition among products of equal quality, sold at fair prices reflective of the costs of producing them, is the basis of our free marketplace. And our exports can create thousands of new jobs for American workers every year.

But the essence of free and fair trade is that our trading partners should both compete fairly in our markets and open their markets to our exports as freely and fairly as we have traditionally done to theirs. We have had the most open market in the world. We have permitted an incredibly free flow of goods and services from other countries since the end of the Second World War when we undertook the reconstruction of the shattered economies of friends and former foes alike.

The program was successful beyond the wildest dreams of our great postwar leaders. And the United States paid a high price for this success. But we did it to preserve the free world's economy and we benefited from it too, over the quarter century in which our strong dollar was backed by an expanding economy and our trade with other countries helped create new jobs for American workers and farmers. And if we can compete fairly in foreign markets, trade can still be the most productive sector in our economy for the creation of new jobs.

In those postwar years, we were able to absorb growing imports from the industrialized countries whose economies we had helped rebuild. Japan and the Western European countries, the Brazils, the Mexicos and the more successful former colonial countries all have been able to capture increasing shares of our domestic market in the last decade. But as their economic problems have worsened, like ours exacerbated by high interest rates and rising inflation, some of these countries have attempted to export those problems—unemployment, lessened demand for their goods, and high financing costs—to us along with their products. By doing this they have been able to keep their workers employed in their problem industries, primarily steel and automobiles, at the expense of our workers.

They have done this through a variety of means. They have unfairly subsidized their exports, through government grants or below-market financing and credits and through aggressive government-backed research and development programs. These programs have helped chosen industries to target in on foreign markets, penetrate them and then unfairly compete with our own industries, cornering our markets for specific products and driving our domestic industries out of business. And these trading partners have dumped products on our markets at prices below their domestic production costs.

Adding insult to the injury they do our economy, they have then closed their markets to American products or artificially limited our access to them by throwing up nontariff barriers to our exports which often prove very difficult to eliminate. All these unfair trading practices, which place American industry and agriculture at a singular disadvantage as we seek to compete in world markets, also affect some of our most troubled and basic industries here at home.

It is these unfair practices which discriminate against our goods overseas and harm our industries at home, that my Fair Trade Act addresses. I am proposing new legislative remedies because the existing law does not provide them. My bill amends title III of the 1974 Trade Act, which deals with "relief from unfair trade practices" specifically including foreign import restrictions, export subsidies, antidumping and countervailing duties, and unfair import practices. As written, the statute authorizes the President to take "* * * all appropriate and feasible steps within his power to obtain the elimination * * *" of such practices. But it mandates nothing. It does not require the President to take any action to eliminate these harmful practices. In my judgment, that is its major flaw.

My Fair Trade Act would require the executive branch to provide the President with annual studies of the unfair trading policies and practices to which I have referred. It would further require the President to transmit the findings to the Congress within a specified period along with recommended actions for retaliation against countries which do not cease these unfair trading practices. The Congress would then be required to endorse specific remedies from among the President's suggested options within a specific time period. And finally, the President would be required to enforce these actions against those engaged in unfair practices unless they ended them within another specified period of time.

I emphasize that the purpose of my bill is not punitive. The process it establishes provides sufficient time—11 months from the time the annual study commences to the time action against the countries must be taken—for negotiations with the offending countries and for them to take the necessary steps to end the practices. It gives our trade negotiators a new persuasive mechanism to use in their dealings with our trading partners, particularly those who have proven most unwilling to end these practices. It is my hope that armed with this machinery, the Trade Representative and the Commerce Department will be able to apply greater leverage at the bargaining table as they seek solutions to our trade problems.

If negotiations are unsuccessful, however, the process of my bill establishes, once set in motion, can only be halted if the practices are ended. If they are not, the Government would not have any choice but to take the specific retaliatory actions endorsed by the Congress against the offending trading partners. These actions could take the form of countervailing or other types of duties, import quotas, or discriminatory customs valuations among the many possible remedies.

I hope other Senators will agree that my bill takes a reasoned and sensible approach to dealing with the trade problems our Nation faces because of the unfair trade practices of other countries and provides effective means to resolve them.

Mr. President, I ask unanimous consent that the text of this bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 647

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Fair Trade Act of 1983".

SEC. 2. STATEMENT OF PURPOSE.

The purposes of this Act are—

(1) to redress imbalances in United States international trade and commerce due to unfair trade practices by United States trading partners;

(2) to give the United States effective weapons to use against subsidized foreign imports into our markets and other unfair trade practices by our trading partners;

(3) to open foreign markets to American products and services in order to improve the United States balance of payments and strengthen the United States domestic economy;

(4) to eliminate barriers imposed by United States trading partners which prevent fair competition between United States

exports and products of United States trading partners; and

(5) to establish procedures requiring Presidential action with respect to the importing of products of other countries into the United States unless such countries take, within a reasonable period of time, appropriate steps to remove impediments to American goods in their economies.

SEC. 3. STUDY OF UNFAIR FOREIGN TRADE PRACTICES AND OTHER BARRIERS TO MARKET ACCESS.

(a) IN GENERAL.—Chapter 1 of title III of the Trade Act of 1974 is amended by adding at the end thereof the following new sections:

"SEC. 307. STUDY OF FOREIGN EXPORT SUBSIDIES, UNFAIR TRADE PRACTICES, AND OTHER BARRIERS TO MARKET ACCESS.

"(a) STUDY OF BARRIERS.—On or before the date which is 6 months after the date of enactment of the Fair Trade Act of 1983 and each year thereafter, the United States Trade Representative shall, for each designated major trading country, complete and submit to the President a study of any act, policy, or practice of each such major trading country that—

"(1) is inconsistent with the provisions of, or otherwise denies benefits to the United States under, any trade agreement,

"(2) is unjustifiable, unreasonable, or discriminatory and burdens or restricts United States commerce, or

"(3) denies to the United States, with respect to products or commerical activities of the United States which (as determined by the Trade Representative) are internationally competitive, commercial opportunities substantially equivalent to those offered by the United States.

"(b) ACTION BY PRESIDENT.—Within 30 days after a study is submitted to the President under subsection (a), the President shall publish in the Federal Register and submit to the Committee on Finance of the Senate and the Committee on Ways and Means of the House of Representatives—

"(1) such study,

"(2) an estimate of the trade distorting impact on United States commerce of any acts, policies, or practices identified in such study,

"(3) all feasible courses of action which would redress any imbalance resulting from such acts, policies, or practices if efforts to obtain their elimination fail, and

"(4) a proposed joint resolution which requires the President to take a specific course of action (beginning on the date which is 60 days after the date of enactment of such joint resolution) which the President has determined to be the most appropriate course of action.

"(c) ASSISTANCE OF OTHER AGENCIES.—

"(1) FURNISHING OF INFORMATION.—Each department, agency, and instrumentality of the executive branch of the Government, including any independent agency, is authorized and directed to furnish, upon request, to the Trade Representative such data, reports, and other information as the Trade Representative deems necessary to carry out his functions under this section.

"(2) PERSONNEL AND SERVICES.—The head of any department, agency, or intrumentality of the United States, including any independent agency, may detail such personnel and may furnish such services, with or without reimbursement, as the Trade Representative may request to assist him in carrying out his duties.

"(3) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this subsection.

"(d) DEFINITIONS.—For purposes of this section—

"(1) DESIGNATED MAJOR TRADING COUNTRY.—The term 'designated major trading country' means any major trading country which the Trade Representative, after consultation with the Committee on Finance of the Senate and the Committee on Ways and Means of the House of Representatives, designates as a country with respect to which a study under subsection (a) is necessary and appropriate.

"(2) MAJOR TRADING COUNTRY.—The term 'major trading country' means—

"(A) any major industrial country within the meaning of section 126, and

"(E) any other foreign country or instrumentality designated by the Trade Representative for purposes of this paragraph.

"(3) COMMERCE AND COMMERCIAL OPPORTUNITIES.—The terms 'commerce' and 'commercial opportunities' have the same meaning given such terms by section 301(d)(1).

"SEC. 308. LEGISLATIVE ACTION ON STUDIES OF UNFAIR FOREIGN TRADE PRACTICES.

"(a) INTRODUCTION OF JOINT RESOLUTION.—Within 5 days after a joint resolution described in section 307(b)(4) is submitted by the President under section 307(b)—

"(1) the chairman of the Committee on Ways and Means of the House of Representatives shall introduce such joint resolution in the House of Representatives and such joint resolution shall be referred to the Committee on Ways and Means, and

"(2) the chairman of the Committee on Finance of the Senate shall introduce such resolution in the Senate and such resolution shall be referred to the Committee on Finance.

"(b) RESTRICTION OF AMENDMENTS.—Only amendments which relate to the course of action to be taken by the President with respect to any act, policy, or practice described in section 307(a) shall be in order in either House. No motion to suspend the application of this subsection or request to suspend the application of this subsection by unanimous consent shall be in order in either House.

"(c) COMMITTEE AND FLOOR CONSIDERATION.—Any joint resolution described in subsection (a) shall be subject to the same procedures and rules applicable to any implementing bill (or, in the case of a joint resolution which contains one or more revenue measures, any implementing revenue bill) under subsections (e), (f), and (g) of section 151, except that in applying section 151(e) in the case of such a joint resolution, '25th day' shall be substituted for '45th day' each place it appears therein.

"(d) CONFERENCE REPORT.—A vote on final passage of the conference report on any joint resolution described in subsection (a) (if necessary) shall be taken in each House before the 60th day after the day on which the President submitted such joint resolution to the appropriate committees under section 307(b).

"(e) RULEMAKING POWER.—The provisions of this section are enacted by the Congress—

"(A) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such they are deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in this section, and they supersede other rules to the extent that they are inconsistent therewith; and

"(B) with full recognition of the constitutional right of either House to change the rules (so far as relating to the procedure of that House) at any time, in the same manner, and to the same extent as in the case of any other rule of that House.

"(f) DISCRETIONARY PRESIDENTIAL ACTION UNDER SECTION 301.—Nothing in this section shall be construed to affect the ability of the President to take action under section 301 without the piror approval of Congress.

"SEC. 309. NOTIFICATION OF OFFENDING TRADING PARTNERS OF LEGISLATIVE ACTION.

Upon enactment of any joint resolution described in section 308(a) in response to any act, policy, or practice of a foreign country or instrumentality, the President shall notify such foreign country or instrumentality that the President will undertake the course of action specified in such joint resolution on the date which is 60 days after the date of enactment of such joint resolution unless such foreign country or instrumentality ceases to commit such act or maintain such policy or practice prior to such date.".

(b) CONFORMING AMENDMENT.—The table of contents for the Trade Act of 1974 is amended by inserting after the item relating to section 306 the following new items:

"Sec. 307. Study of foreign export subsidies, unfair trade practices, and other barriers to market access.

"Sec. 308. Legislative action on studies of unfair foreign trade practices.

"Sec. 309. Notification of offending trading partners of legislative action.".

SEC. 4. DISCRETIONARY ACTION BY THE PRESIDENT UNDER SECTION 301 OF THE TRADE ACT OF 1974.

Section 301(a) of the Trade Act of 1974 (19 U.S.C. 2411(a)) is amended—

(1) by striking out "or" at the end of paragraph (2)(A);

(2) by inserting "or" at the end of paragraph (2)(B);

(3) by inserting immediately after subparagraph (B) of paragraph (2) the following new subparagraph:

"(C) denies to the United States commercial opportunities substantially equivalent to those offered by the United States;";

(4) by inserting "(or to redress any imbalance resulting from)" after "elimination of"; and

(5) by striking out the last sentence thereof and inserting in lieu thereof the following new sentence: "Action under this section may be taken on a nondiscriminatory basis or solely against the products or services of the foreign country or instrumentality involved, and need not be limited to the equivalent product or service sector of the foreign country.".

Mr. BYRD. Mr. President, I apologize to my good friend from Mississippi, who is always a gentleman, whom I admire, for keeping him waiting so long.

Mr. STENNIS. Mr. President, I thank the Senator very much. No explanation or apology from him is needed.

RECOGNITION OF SENATOR STENNIS

The PRESIDING OFFICER (Mr. TRIBLE). Under the previous order, the Senator from Mississippi (Mr. STEN-

NIS) is recognized for not to exceed 15 minutes.

HIGH TECHNOLOGY MORRILL ACT

Mr. STENNIS. Mr. President, it is my privilege to have been given on yesterday 15 minutes to present remarks on a bill introduced yesterday by the Senator from Massachusetts (Mr. TSONGAS), S. 631.

I am a cosponsor and coauthor of that bill, and, with him and our respective staffs, we have worked together on it.

This is no ordinary measure, Mr. President. A great deal of work in the field of education has been done with reference to this problem and this measure which is suggested as an answer.

Mr. President, I am going to speak rather briefly, but I cannot overemphasize the importance of this measure, in my humble opinion, because it seeks to meet a special need now for more practical applications of leadership in science and technology, and particularly through our educational processes.

Mr. President, the unmatched progress and growth of our great Nation over the past 200 years has come in large measure from the leadership of our Nation in the practical application of science and technology. In every field of endeavor—agriculture, space, communications, commerce, medicine, chemistry, energy, and so on—U.S. engineers and scientists have led the way in getting the job done. Their record of scientific achievement has created the most bountiful nation and bountiful economy ever to exist, by and large, on the face of the Earth.

But with all of our progress, storm clouds are on the horizon. Some are the result of the pace of the new discoveries in science and technology and the changes are coming at such blinding speed that many of our workers are being dislocated by new machines and by new methods of manufacturing.

Some of the storm clouds are the result of forces which are largely economic. The wage and price battles which characterized the 1960's and the 1970's have weighed heavily on our major industries. Many of these mainstay industries, like autos and steel, have not since been able to successfully compete in international competition. And while higher prices took a heavy toll, there are other factors, some related to our engineering abilities. The most modern auto production plants in Japan seem to turn out autos that have the appearance of being of higher quality by virtue of better fit and finish, and some consumers say that the automobile built by our foreign competitors are more reliable and perform more to their liking.

Mr. President, those are not idle words. Those words are not hurriedly chosen and spoken. I am a stubborn kind of fellow and I was slow to yield to the validity of these facts that I have just related, but I decided we had to face the facts whatever they are, and we have to try to do something about them.

Finally, and most important, there are signs that the United States is beginning to slip in areas of basic research. National testing programs and surveys tell us that recent high school and college graduates are becoming increasingly unaware of math and science. This downhill slide could have grave consequences for the Nation's economy and defense. Our economic prosperity and national security depends on the Nation's ability to reverse this downward trend in education, particularly in the fields of math and science.

The solution will not come easy, Mr. President. In recent discussions with educators in my State, I was told that there are serious deficiencies at all levels of math and science education. For example, over one-half of all new high school math and science teachers do not meet the full requirement for teaching; 10 percent of all college engineering faculty places are either vacant or filled by temporary instructors. I am told that science, math, or engineering graduates right out of college can make more than their professors who have a higher degree. In my State of Mississipipi, recent engineering graduates started at $27,000 while beginning high school and math teachers earned $11,000.

Mr. President, I pause to say we are making progress in relieving some of those situations. I am using my own State here not as illustrative of the Nation but as a fact of life that is there, that I am familiar with and have some knowledge of. The problem, though, is just about as bad in other areas of the United States on a relative basis as the comparisons here that I have given.

Does the Senator from West Virginia wish to speak? I shall be glad to yield to him. He has a tremendous interest in this field.

Mr. BYRD. Mr. President, I thank the Senator. I am very impressed with what he has to say. I think America has its priorities mixed up. There are fewer math teachers, I am told, and fewer science teachers than we had in 1970. I hesitate to say this, but sometimes, I think we are more interested in good football teams than we are in the basic educational scholastic performances of our young people.

I do not say this to denigrate football at all. I think it has a proper place. I enjoy watching West Virginia beat the tar out of some other team.

Mr. STENNIS. Mr. President, I know the Senator's great concern and great knowledge of the needs in this field.

Mr. BYRD. When I go to other States and they say, "Ours is the No. 1 team," I say to myself, how well can they spell or how well can they add, subtract, divide, and multiply? We did not put men on the Moon without great cost and without tremendous development in science, and physics, and so on. It has had great influence on other fields, like medicine. I do not want to take the Senator's time, but he is talking on a subject that we ought to listen to and we ought to do something about.

I can remember when the Soviets put Sputnik into space and all of a sudden President Eisenhower and Congress provided for putting a man on the Moon; and Jack Kennedy came along and we put a man on the Moon and brought him home safely again. We can do it if we just set ourselves to do it. I thank the Senator for yielding and for calling the attention of this body and the press to this problem, which is a very serious one.

Mr. STENNIS. Mr. President, I remember when Sputnik went up. I remember the actual alarm which permeated these corridors around here, this floor. I remember the names of many we called in for conferences and for hearings. As I told a group of engineers in my home State some 2 weeks ago in a speech, we finally turned to the engineers of the Nation when young John Kennedy, then in full vigor and health, issued his order for putting a man on the Moon.

Mr. BYRD. Mr. President, will the Senator yield for a question?

Mr. STENNIS. Yes.

Mr. BYRD. At that time, had we not fallen behind in our science classes and our math classes in school? Had we not become fat and lazy?

Mr. STENNIS. Well, to a degree, yes. But we responded.

Mr. BYRD. Right. There was a great resurgence. Once the Soviets put up Sputnik, we really began to see reality on the campus and emphasis on the teaching of science and physics.

Mr. STENNIS. Those engineers listened with great pride, really, to the compliment I paid to them, that they were the ones; of all the rest we had, we turned to them.

Mr. BYRD. Now we are slipping back into that same situation where we were before Sputnik occurred.

Mr. STENNIS. And the situation now is changing and this time we are realizing it earlier. I think we shall find a way.

Mr. President, let me call attention to this problem which has been brought to my attention. The demands of our rapidly changing technical environment has placed a premium on engineering graduates. The high salaries

paid by industry for engineers have brought masters and doctorate programs to a standstill.

Let me repeat that, Mr. President. We all like to see a prosperous person get a good salary, so to speak. But this states as a fact that these salaries now that are paid by industry for engineers are so high that they have brought masters and doctorate programs in education to a standstill. The net result is that industry is eating its own seed corn. Clearly, we must do something to make teaching of math, science, and other related areas more financially appealing.

This is not just a plea for money or another educational bill trying to put out a limited program. This is the broad search, the broad appeal for a new policy and new methods. Teaching is the second greatest profession, Mr. President. That is what I believe. It is second only to the ministry itself.

I find to my surprise in this field that the school equipment and supply situation is also in a depressing state. University engineering and research equipment and facilities are outdated and obsolete in many instances. Science equipment for all elementary and high schools is woefully inadequate or nonexistent when considered by the needs of the present demand. Something must be done and done soon to correct this problem.

Our college class of the year 2000 will enter the first grade next year.

Think of that, Mr. President. These little fellows coming in school for the first time this next school year will be the college class of the future, the year 2000.

That generation to which I refer may be the make-or-break generation to assure our future economic strength, our competitive edge in technology and production, and our ability to defend ourselves. This educational problem, Mr. President, is urgent. Time has not run out on a solution but the clock is running fast.

Here I refer to the Soviet launching of Sputnik in 1957. This Nation was reminded of the importance of maintaining its leadership in technology. Congress and the Nation got busy.

I remember one witness testified that unless we built a test facility with a thrust of a million pounds we would lose the race. Some segments of the press said it was ridiculous to talk about a million pounds of thrust. A short time later, due to the magnificent program we adopted, the thrust that we had then in one test facility was 6, or 7, or 8 million pounds.

We set our goals and passed the landmark National Defense Education Act which provided unprecedented levels of aid to the school system at all levels. We engaged in a bold crash program to land on the Moon.

I remember that I was chairman of the Subcommmittee on Military Construction. We were watching the dollars mighty close, we thought. I asked the question, How much did the President recommend? He said that there was no limit on the recommendation; everything was to be on a crash basis.

These efforts were successful and they worked well together. As we all know, the real meaning of the Moon race was not just reaching the Moon but developing the expertise in the various fields and the technological ability to get there.

The challenge before us now is our economic future and our national defense.

Someone said, "Oh, well, the Senator from Mississippi is always talking about national defense."

I am proud to be able to talk about it some, but I say here now that this challenge is to our economic future. The warning signs are also clearly there to heed. They are common knowledge to all of us—persistent unemployment, slowed productivity, and loss of market share.

In most any office building you go into, the elevator to go up or down has no one there. That job has been dispensed with.

I was at a launching of the Navy's newest guided-missile cruiser a few weeks ago and they announced the crew of the old ship *Ticonderoga* was 800 men. That was some 80 or 100 years ago. This modern ship with everything, said to be one of the greatest ever put together, has a crew of 400 men, a reduction of 50 percent.

Everywhere we are turning we are eliminating through our scientific methods the need for the individual to be employed. Something special must be done to meet the needs of our economy to furnish simple employment.

There will not be any magic solution to any of these problems now confronting our Nation, but they must be addressed and those problems must be won.

It will, as it always has, require imagination, discipline, application, and plenty of plain commonsense and hard work.

I am confident that we have the resources to conquer these problems. We have a good foundation already in place to build upon. We have the world's highest student retention rate. Three-quarters of the U.S. children finish the 12th grade. We have the largest public school and university system in the world and the finest school buildings by any objective measure. This is a valuable storehouse of capital which can be used to build on and restore the United States to a preeminent position in science and technology.

There is the rub in our present situation, the lack of those key students.

This effort must start in the schools. We need to correct the shift away from the quality of education which seems to be occurring. Our children have proven that they have enormous capacities to learn. We need to address the teacher shortage and equipment problems of our educational plants. We need to address the need for upgrading the education and training of our current engineers, scientists, and technicians.

I believe that the bill which my colleague from Massachusetts (Mr. TSONGAS) and I are introducing along with Senators HART, PELL, and RANDOLPH, is a step in the right direction. It will involve Government, educational institutions, and industry in an attack on the education problems of preparing for our Nation's future. We all, parents, government, industry, and educators, have an enormous stake in this, and I urge my colleagues to join in this effort and to become more and more informed. I urge that this bill be considered by the appropriate committees as soon as possible, and I offer my assistance to work for passage of this educational assistance bill.

In summary, Mr. President, this pattern is not limited to the so-called land-grant colleges and universities by any means but as a broad proposition it follows partly the plan as set forth more than 100 years ago by a bill that became known as the Morrill Act or the Land-Grant College Act, whereby, money obtained by the Government from the sale of land was plowed back in, so to speak, by the Federal Government. We did not have direct Federal aid then. It was plowed back then, so to speak, and set forth this undertaking which has been highly successful.

I am not a stranger to that. I did not just read it in the paper. I had the privilege of going to a land-grant college, and I grew to manhood amid surroundings of that kind, with professors, instructors, and fellow students.

Mr. President, I have certain factual material regarding the high technology involved which I ask unanimous consent to have printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

HIGH TECHNOLOGY MORRILL ACT: FACT SHEET

PURPOSE

To establish a national grants program providing matching Federal assistance for joint initiatives by private industry, educational institutions and state government to strengthen science, engineering, and technical education.

RATIONALE

An adequate supply of scientific, engineering, and technical personnel is essential to ensure U.S. scientific and technological leadership, to bolster U.S. international competitiveness and domestic employment, and to safeguard national security. Our educational system must respond to the economic challenge by improving the quality of math and science instruction at the pre-college level, strengthening and modernizing programs in science, engineering and tech-

nology in our colleges and universities, and developing the capability to provide lifelong education education and training to our existing technical workforce.

PARTNERSHIP

This Act would authorize a program of competitive grants for technology education projects and programs jointly sponsored by industry, educational institutions, and state governments. In order to be eligible for the 50 percent matching Federal grant, private industry would contribute 20 percent, and states 30 percent, of the total project costs. This formula ensures that federal funds to strengthen technological education would comport with the economic development policies of the state, educational needs of our schools and colleges, and priorities of the private sector. As a result, Federal funds would be channeled into educational areas that industry identifies as important for maintaining U.S. technological leadership.

ELIGIBLE ACTIVITIES

Grants made under this Act may be used to:

Modernize university lab equipment;

Establish university research/education centers;

Expand technician training programs at community colleges;

Develop lifelong cooperative education programs to maintain technical skills of the current work force;

Initiate programs to retrain workers for jobs requiring more technical skills;

Enhance math, science and engineering teaching as a career;

Establish computer literacy programs in elementary and secondary schools;

Improve educational productivity through the development of new educational methods and equipment;

Develop programs to teach the management of technological innovation;

Improve the access of women, minorities and handicapped to the fields of technology;

Encourage cooperative programs between humanities and sciences; and

Support any other programs that strengthen technological education.

CRITERIA

In making grants under this Act, the following criteria shall be used:

The activity is not likely to proceed without the grant;

The activity embodies innovative approaches not adequately provided by existing public and private programs;

The activity responds to clearly established technical education needs of industry;

The activities will result in sustained efforts or lasting improvements in education programs and facilities.

The Act also encourages applications involving joint programs between institutions of higher education and elementary and secondary schools, participation of small business, and regional efforts.

FUNDING

The Act would make available approximately $500 million of Federal matching grants per year for five years. Three percent of the federal revenues from the sale of energy and mineral resources on Federal lands are placed in a Technology Education Trust Fund, which are then made available for grants by annual appropriation.

ADMINISTRATION

The technology education grants established by this Act are to be administered by the Director of the National Science Foundation. He is authorized to establish an advisory committee representing industry, education, states, professional societies and labor, and to consult with the Secretary of Defense and other agencies to ensure coordination of Federal efforts.

PRECEDENT

The Morrill Act of 1862 devoted 17 million acres of Federal land for founding agricultural colleges across the country. Proceeds from the sale of the land were invested, and interest earned accumulated in a perpetual fund for the support of the land grant colleges. This act sparked a technological revolution that led to U.S. industrialization and made U.S. agriculture number one in the world.

Mr. BAKER. Mr. President, I thank the Senator from Mississippi for his insightful remarks. The Senate is grateful, as I am grateful, for his experience in this field and his recommendations in that respect.

Mr. STENNIS. I thank the Senator very much. He is a very practical man, and I value his interest and his persistence with respect to the problems in the field of education.

ORDER FOR ROUTINE MORNING BUSINESS

Mr. BAKER. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business, not to extend past 11:15 a.m., in which Senators may speak for not more than 1 minute each.

The PRESIDING OFFICER. Without objection, it is so ordered.

CHANGE OF TIME FOR CONSIDERATION OF SENATE RESOLUTION 76

Mr. BAKER. Mr. President, I ask unanimous consent that the time for the consideration of Senate Resolution 76 be advanced until 11:15 a.m., instead of 11 a.m. today.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATOR BAKER EXCUSED FROM ATTENDING SESSION TOMORROW

Mr. BAKER. Mr. President, the President of the United States has invited me to attend a state dinner in honor of Her Majesty Queen Elizabeth and Prince Philip, in San Francisco, on tomorrow, Thursday.

I ask unanimous consent that I may be excused from attending the session of the Senate on Thursday.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE ARMENIAN GENOCIDE

Mr. PROXMIRE. Mr. President, the August 1982, issue of the Department of State Bulletin states that, "Because the historical record of the 1915 events in Asia Minor is ambiguous, the Department of State does not endorse allegations that the Turkish Government commited a genocide against the Armenian people." It is clear that this statement is wrong on all counts. After protests from Members of Congress, the following issue of the Bulletin said that the views expressed in this article were not necessarily those of the Department. However, this response fails to state what the position of the Department, in fact, is on this issue.

For the official publication of the Department of State to raise doubts regarding the existence of this genocide—in the face of the overwhelming verifying evidence—is ridiculous.

Consider the Turkish persecution of the Armenians. In 1914, the Turks called a general mobilization of their army in preparation for World War I. In their call they included all able-bodied Armenians. However, beginning in February 1915, they segregated the Armenian troops into labor battalions. The Turks then disarmed, and ultimately worked the Armenians to death or massacred them. At the same time, the young Turk Government began to release murderers and other criminals from prison for the express purpose of annihilating the Armenians. As a result, the Turks slaughtered the entire Armenian population of some villages.

Nineteen hundred and fifteen marked the beginning of large scale deportations and massacres of the Armenians, reaching a peak with the Edict of Deportation of May 27, 1915. Under this proclamation, the Turks deported thousands of Armenians from throughout the Ottoman Empire. The Turks separated the men from each group and brutally murdered them, while forcing the women, children, and elderly to march across Asia Minor and Turkish Armenia to the Syrian desert. Most of the marchers, without food, water, or adequate shelter for long periods of time, died. As a result of these government-led massacres and deportations, in the period from 1915 to 1923, 1,500,000 Armenians perished, and more than 500,000 were exiled.

This documentation is irrefutable. It is in no way an ambiguous record. Our own diplomats verified the horrible stories told by witnesses and survivors. The U.S. Ambassador to Turkey at the time, Henry Morgenthau, Sr., in a 1915 telegram to the Secretary of State called the treatment of the Armenians "a campaign of race extermination." He reiterated this allegation in his book, "Ambassador Morgenthau's Story," when he said that "(the Turkish authorities issued) a death warrant to a whole race * * * and, in their conversations with me, they made no particular attempt to conceal the fact." This is testimony from an

American Ambassador, an agent of American diplomacy. It leaves no room for ambiguity.

President Reagan said, in a proclamation on April 22, 1981, that "the lessons of the (genocide of the Armenians) must never be forgotten." This is clearly true. The denial of the fact of the Armenian genocide is an affront to all who value human life, and detracts from the integrity of American diplomacy. This blunder must surely raise serious questions in the minds of our fellow nations about the strength of our commitment to human rights.

There are two steps needed to rectify this situation: The first is an unequivocal retraction of this State Department error. The second, crucial step is ratification of the Genocide Convention. Ratification will tell the world, once and for all, that the United States has a firm commitment, in word and in deed, to the preservation of humanity. It will show that the greatest democracy in the world will never cease to be the proud guardian of human rights. We must make it clear that we recognize any and all genocide, past and future, as what it is—an unconscionable crime against all of humanity. I strongly urge my colleagues to join me in seeking ratification of this essential treaty.

RECENT ARTICLE OFFERS NEW INSIGHT INTO THE NUCLEAR FREEZE ISSUE

Mr. PROXMIRE. Mr. President, on December 7, 1982, an article on the nuclear freeze resolutions now before Congress, entitled "Cold, Hard Facts on the Freeze," appeared in the Washington Post. This piece was written by the Honorable Congressman ALBERT GORE, JR., of Tennessee. This provocative, penetrating look at the nuclear freeze issue deserves this body's attention, and I encourage my colleagues to take the time to consider Congressman GORE's views.

"Cold, Hard Facts on the Freeze" is an article that clearly demonstrates the futility in this Congress assuming a negative role on the Reagan administration's policies toward the Soviet Union. "What looms ahead for Congress," Congressman GORE writes, "is a protracted struggle over the future of nuclear weapons, on a system-by-system basis, without benefit of any common framework for evaluating each one and debating its merits in relation to an agreed national strategic plan."

This is a sizable challenge indeed, but it is a challenge that we must meet as soon as possible. Congressman GORE's article could prove useful in setting this new course.

Mr. President, I ask unanimous consent that the article be printed in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLD, HARD FACTS ON THE FREEZE

(By ALBERT GORE, Jr.)

During the next two years, Congress, and the House in particular, is likely to be the scene of a major crisis in our nation's defense policy. Enormous federal deficits will demand major reductions in government spending. Those cuts are not all going to come out of social programs, and therefore many will come out of the military budget. And in the military budget, nothing is more visible and vulnerable than the nuclear weapons program: big-ticket items whose value to the national security has been sharply challenged by the nuclear freeze movement.

Among the nuclear weapons program, the one with the least chance for survival is clearly the MX missile. But there are already indications that other programs, including the Pershing II missile for NATO and, very likely, the B1, again, will be challenged. Other programs, including cruise missiles and the Trident D5 submarine-launched missile, have their critics too, but are not as likely—for the time being, at least—to be at the center of controversy (although even this judgment may have to be modified, in the case of ground-launched cruise missiles for Europe).

We can expect President Reagan to show very little flexibility in this area. He will insist that the country requires all these weapons systems, and he will charge that if Congress refuses to fund them, it must take responsibility for weakening the national security, diminishing Soviet interest in arms control, and ultimately, increasing the hazard of war.

Proponents of the freeze reject this logic, and are likely to have enough votes in the next Congress to ensure that Reagan's arguments for major nuclear weapons programs across the board are rejected.

This having been done, however, members of Congress will then have to face the hard facts that (1) Reagan will not adopt the freeze programs as his own, because to do so would require him to abjure everything he believes about dealing with the Soviets; (2) funding decisions for nuclear weapons programs will have to be taken by Congress without benefits of an arms control framework; (3) new or modified Soviet nuclear weapons systems will continue to appear and to move toward deployment, and (4) public opinion, which has been inspired to doubt the value of nuclear superiority, has never lost its repugnance for conceding it to the Soviet Union by unilateral actions.

What looms ahead for Congress, therefore, is a protracted struggle over the future of nuclear, weapons, on a system-by-system basis, without benefit of any common framework for evaluating each one and debating its merits in relation to an agreed national strategic plan.

The president's philosophy will not serve for this purpose, but neither will that of the freeze movement. On the day after the House passes a resolution affirming its desire for a mutual, bilateral freeze with the Soviet Union, it must nevertheless continue to decide the fate of U.S. nuclear weapons in the absence of such an agreement, or even of the hope for one while Reagan is in office.

Congressional advocates of a freeze will face an especially painful dilemma. A pattern of votes against nuclear weapons programs adds up to unrequited concessions to the Soviet Union. But a pattern of votes in favor of such weapons adds up to approval of a process that will rapidly erode the freeze as a viable policy for a future administration.

What we lack today, and what the next Congress will urgently need, is a standard that will help us reach better-informed judgments as to what kind of nuclear posture we should have, as to what kinds of nuclear weapons programs are compatible with that posture, and as to how these decisions affect the stability of the nuclear balance and prospects for reaching an agreement with the Soviets.

Two months ago, I joined with Reps. Les Aspin, Thomas Downey, and Joel Pritchard to introduce a resolution suggesting what this standard ought to be.

The United States and the Soviet Union are heading toward a situation in which each will have the ability to menace a significant portion of the other's nuclear forces; specifically, the land-based ICBMs, which are the most accurate and in many ways the premier weapons systems.

Our response to the ICBM vulnerability problem has been the development of two new generations of ballistic missiles: the MX, for depolyment on land, and the Trident II D5, for deployment at sea. Each will mark an increase in the number and accuracy of U.S. ballistic missile warheads, such that either system, and certainly the two together, will constitute a threat to all Soviet ICBM silos.

The increasing vulnerability of U.S. land-based forces, and the coming vulnerability of Soviet land-based forces, are trends that are fraught with danger. Mutual fear of a first strike is highly destabilizing and markedly increases the risk of nuclear war, while putting at risk any prospect for meaningful arms control.

Congress should recognize this fear of a first strike as the central issue in judging whether existing deployments are adequate, for deciding what new deployments make sense, and for assessing whether arms control is on the right track. In the highly charged tension between the U.S. and the U.S.S.R., even a hypothetical advantage gained by striking first is dangerous and destabilizing, because it generates fear and raises the specter of political intimidation. Our resolution states that, as part of the strategic arms reduction negotiations (START), the United States and the U.S.S.R.:

(1) Should place the highest priority on efforts to reduce and eliminate the fear by either nation of a nuclear first strike against it by the other.

(2) Should seek a verifiable agreement that produces stability in the strategic relationship between the two nations by ensuring that a nuclear first strike would not confer upon the attacking nation even a hypothetical advantage.

To grasp this framework and apply it, the president need not repudiate his view of the world, but rather, modify and refine it. In theory, the next Congress might seek to bind the president to freeze measures by threatening to block major spending bills until he gives in. I hope we will avoid that kind of confrontation, but to do so requires the development of a bipartisan consensus on the nuclear problem, rather than polarization of the debate.

The freeze resolution, which I have supported, states an ideal we are not going to see realized, or even pursued, by the present

administration. Meanwhile, Congress—and the country—will need some basis for a discriminating and, in the end cathartic debate over our course of action. Given the right outcome, we might find areas of agreement strong enough to put consensus, rather than controversy, behind the president in his dealings with the Soviet Union.

PRIVATE EXPRESS STATUTES

Mr. STEVENS. Mr. President, as many Members know, there is increasing discussion of the question of whether or not Congress should amend the private express statutes, those statutes which provide the monopoly status for the Postal Service over delivery of first class letter mail.

Various proposals have been either talked about or introduced which would allow private businesses to carry first class letter mail. If such laws were passed, they would have a detrimental effect on the entire U.S. postal system and the ability of every American to be an equal partner in our universal postal service.

There is an erroneous assumption that private business would support such an effort to modify or eliminate the private express statutes. The theory is, as I understand it, that repealing the private express statutes would open up a new avenue for business to pursue and such entry by the private sector would mean a more efficient hard-copy communication system for the business community.

I recently received a letter from Mr. R. L. Bulger, a vice president of Harry and David, a private business which utilizes the Postal Service to a great extent. In writing to me, Mr. Bulger points out that the business community would suffer if the private express statutes were repealed. He states:

The Private Express Statutes are not to protect the Postal Service. They are to protect the American people. They are in the public interest.

I wholeheartedly concur and ask unanimous consent to have the entire text of Mr. Bulger's February 1 letter printed in the RECORD.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

HARRY AND DAVID,
Medford, Oreg., February 1, 1983.

Hon. TED STEVENS,
U.S. Senate, Russell Office Building,
Washington, D.C.

DEAR SENATOR TED STEVENS: On behalf of Harry and David and Jackson & Perkins Company, subsidiaries of Bear Creek Corporation in Medford, Oregon, I urge you to oppose any efforts to repeal the Private Express Statutes.

Our companies are engaged in the direct marketing by mail of a broad variety of fine fruit, gourmet food products, garden plants and products—with postage payments to the U.S. Postal Service exceeding $12 million for the mailing of some 70 million catalogs and other mail. Our employment varies during the year, from approximately 900 to 2,300, according to the season. Our annual Oregon payroll, Bear Creek's fiscal year ending June 30, 1982, was $17 million.

The purported ability and desire of some private firms to compete with the Postal Service in mail delivery has renewed the proposed panacea for the Postal Service's operating and financial difficulties—namely, the repeal of the Private Express Statutes.

If the Private Express Statutes are repealed, the most likely result is that private entrepreneurs would serve only the most profitable market—the First Class Mail of businesss mailers, which has been finely sorted by many businesses down to the most efficient delivery level through Carrier Route or ZIPcode before delivery to the Postal Service, thereby leaving the Postal Service with relatively inexpensive handling for this mail.

This mail would fall easy prey to the private firms in every metropolitan area. Private firms would quickly cash in on the profit opportunity inherent in the relatively easy and inexpensive local delivery of items such as monthly bills and financial statements for local companies. As "cream skimmers" expanded their operations, the resulting diversion in volume and revenues away from the Postal Service would be substantial, leaving the most costly and least productive segment of the letter mail market to the Postal Service.

The Postal Service, under mandate from Congress, must serve all. The increased costs of handling this residue would force Postal rates to climb rapidly, unless Congress chose to establish massive subsidies for the Postal Service.

The Private Express Statutes are not to protect the Postal Service. They are to protect the American people. They are in the public interest.

We need a universal mail system at uniform prices throughout this country to serve the people of America. Congress, over the years, has shaped a Postal system that serves a wide array of social and political objectives:

Frequent delivery.

Maintenance of numerous collection and distribution points.

Continuation of a strong rural network.

Universal letter mail service.

Uniform rates.

Repeal of the Private Express Statutes would mean some or all of these goals would be abandoned, with resultant higher costs.

Your opposition to any weakening of the Private Express Statutes is in the best interests of all Americans. We urge you to maintain the Private Express Statutes.

Best wishes,

R. L. BULGER,
Vice President,
Order Processing for Harry and David.

FEDERAL EMPLOYEES RETIREMENT REFORM BILL

Mr. STEVENS. Mr. President, last fall I introduced a reform of the civil service retirement system to be applicable to new Federal employees and optional for current ones. A great deal of misinformation has been circulated throughout the Federal community about this legislation, misconstruing both the intent and provisions of the bill. However, one Federal employee union local president in Alabama recently wrote me regarding my efforts. His letter capsulizes the intent behind the legislation.

I believe that if other Federal employees analyzed our proposal in light of other recommended changes, they would come to the same conclusion as the Alabama official. I ask unanimous consent that his letter, plus his analysis of the legislation, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD as follows:

AMERICAN FEDERATION
OF GOVERNMENT EMPLOYEES,
Redstone Arsenal, Ala., December 6, 1982.

Hon. TED STEVENS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR STEVENS: Inclosed is a copy of an analysis that I did of your proposed Federal Employees Retirement Reform Bill, S. 2905, based upon your own detailed explanation of S. 2905 that was circulated among approximately 12,000 Federal employees in the Huntsville, Alabama area.

I know that my analysis was incomplete, and certainly imperfect, but I felt an attempt should be made to condense your proposals in the hope that the employees in our bargaining units would be encouraged to give your proposal very serious consideration in light of other and much worse proposals that the Reagan Administration might attempt to legislate in the very near future.

In other words, I looked upon your proposal as an attemt to alert Federal employees to the fact of life that: "Something drastic in going to happen to your retirement program in spite of what members of Congress who have your best interest at heart do to protect it! So, here is the best alternative to those drastic possibilities that I (Senator Stevens) can come up with." I am convinced that you were not trying to take away benefits, but protect current employees by given them a choice, in light of the anti-federal employee climate that exists in the minds of many, and which is being exploited to offset the pressures being placed on the Congress concerning the Social Security System's problems, such as bringing all employees with 10 years or less Federal service under Social Security.

In closing, I must say that your proposal has many attractive features that might prove both beneficial and attractive to either new or younger current employees. (I am 60 with 26 years service.)

You are to be commended for your efforts in behalf of Federal employees both in the past and for your current endeavor.

Sincerely,

ROBERT L. FLETCHER,
President.

RETIREMENT BILL

EDITOR: The following is a brief analysis of Senate Bill S. 2905 introduced by Senator Ted Stevens and which would drastically change the retirement system for future Federal Employees, and allow current employees the option of changing.

The analysis is not all encompassing.

Current employees could elect to remain under the present retirement system.

A. THREE TIER PLAN

1. Social Security. Mandatory coverage by Social Security of all federal employees hired after date of enactment, with option

to current employees to elect coverage under the new system.

2. Basic Pension Plan. A defined contribution. The Government will contribute to the employee's account 9 percent of first $20,000 (adjusted annually) and 16 percent for every dollar thereafter. The employee would not make any contribution to this Plan. Five years participation required to acquire a vested interest.

3. Voluntary Thrift Plan. Employee may contribute up to 16 percent of basic pay in a fiscal year. The Government will then match 100 percent of the employee's contribution up to 3 percent of salary. For example, if the employee contributes 6 percent, the Government will contribute 3 percent; if the employee contributes 2 percent, the Government will contribute 2 percent. Vesting begins with 20 percent per first year, increasing by 20 percent each year until 100 percent vesting is reached after fifth year.

B. SICK LEAVE AND DISABILITY SYSTEM

A new sick leave and disability system is established. Each employee will be granted seven days of non-accumulating annual sick leave. Illnesses or injuries necessitating longer leave will trigger short-term accident and illness insurance. Such insurance will be preceded by a short waiting period and application for such payment must be accompanied by medical documentation. Depending upon one's length of service and the duration of his absence, an employee will receive 100%, 80%, and 60% of his gross pay.

If the absence will extend beyond six months, the employee may apply for long-term disability. If he qualifies for disability under social security, he will be guaranteed 60% of his gross pay until restoration or death. If he does not qualify for social security, he will remain covered for two years. After two years, he must take a fitness examination or be dropped from the rolls. If he is considered capable of performing any federal job, he must be appointed to a position. If he refuses the position, all disability payments cease. If he is not able to perform any federal job but is still not eligible for social security, he will receive 40% of his gross pay until restoration or death.

C. TRANSFER, WITHDRAWALS, AND DEFERRED ANNUITY

1. Social Security. Credits would be transferable as in the private sector.

2. Basic Pension Plan. After five years, if any employee leaves the Government, the employee can choose any one of the following options:

(a) A lump sum payment of the full value of earned pension credits (including interest).

(b) A deferred annuity based on full value of credits earned prior to separation, plus any additional interest earned on those credits up to the date the annuity begins.

(c) An immediate annuity (including interest).

(d) Survivors would receive social security benefits plus the accumulated earnings in the employee's or annuitant's account.

3. Voluntary Thrift Plan. Employee can withdraw at his or her option.

D. GOVERNMENT BUY-OUT PROVISION FOR CURRENT EMPLOYEES

Under the Basic Pension Plan (A-2 above), current employees would be offered any one of three options:

1. Remain totally under the current retirement system.

2. Select Buy-Out option where the Government would match dollar for dollar the contributions made by the employee to the current system, and then apply a 5% interest factor to the new total sum, compounded by the years the contributions were made. Plus an amount equal to 14% of the employee's daily rate of pay for each day of accumulated sick leave. The employee would then have to participate in the new system for five years to acquire a vested retirement right. This plan supposedly would be more beneficial to employees with 13 or less years of service.

3. Select Buy-Out option where the Government transfers an amount equal to the present value of benefits payable to the employee, actuarially determined, based on the length of service (including credit for accrued sick leave) and average pay of the employee on the date of election, plus the amount of the contributions made by the employee, at an annual interest rate of 6%, and an assumed average annual increase in the consumer price index of 6%. (It is not certain at this time if the 6% interest is a "discount" interest, or an add-on interest compounded annually.) The employee would then have to participate in the new system for five years to acquire a vested retirement right. This plan would supposedly be more beneficial to an employee with more than 13 years service.

4. If an employee should leave Government service before the employee has been in one of the new plans for five years, the employee may withdraw the contributions originally made to the current system plus contributions made to the thrift plan, or elect to have the time under the current system recredited to the current system. If reemployed at a later time, repayment provisions are included.

5. Provisions are provided for payment of court-ordered payments in such matters as divorces annulments, legal separations, and property settlements.

The foregoing is not intended to be an "expert" analysis, but is provided to alert employees to look hard at this bill. It is a very complex legal proposal, not yet substantiated by actuarial figures, but which on the surface seems to have long term merit.

On the McNeil-Lehrer Report, Monday, 15 November 1982, Mr. Alan Greenspan, Chairman of the Social Security Study Commission, replied to a question as to "what effect the bringing of Federal employees under Social Security would have?" "That it would have little net effect."

Local 1858 takes no position on this matter at this time. We will try to obtain more expert advice from our national office and from Senator Stevens' office.

ROBERT L. FLETCHER,
President, AFGE Local 1858.

A TRIBUTE TO MARY McLEOD BETHUNE AND MARY C. SIMMS OLIPHANT

Mr. THURMOND. Mr. President, President John Kennedy once said that a nation reveals itself by the people it produces and those whom it honors and remembers.

Today, I have the singular pleasure of recognizing two outstanding South Carolinians who have distinguished themselves in their respective fields, and in doing so, have earned the admiration and respect of my State.

However, the accomplishments of these individuals transcend the boundaries of South Carolina. Indeed, the work of these two women—Mary McLeod Bethune and Mary C. Simms Oliphant—has, in many ways, benefited all of us. Their accomplishments, in fact, are the property of our entire Nation, available for all Americans to savor and enjoy.

Last month, I had the privilege of attending ceremonies where these two women were inducted into the South Carolina Hall of Fame in Myrtle Beach. Mary McLeod Bethune, who died in 1955, was inducted posthumously for her accomplishments in the field of improving educational opportunities for blacks. Mary C. Simms Oliphant, known affectionately in my State as "Miss May," was inducted into the Hall of Fame for her achievements in the fields of education and historical research.

Joining me at those ceremonies were the Honorable Richard W. Riley, Governor of South Carolina, and the Honorable Samuel R. Pierce Jr., the Secretary of the Department of Housing and Urban Development. Summing up the lives and accomplishments of Mrs. Bethune and Mrs. Oliphant is a difficult task. It is difficult because these women have left South Carolina and indeed our Nation with a richer heritage. In short, their accomplishments are testimony to the great resolve of the human spirit.

I was impressed with the tributes paid to these two women by Secretary Pierce and Governor Riley. I commend them to my colleagues because the lives of Mary McLeod Bethune and Mary C. Simms Oliphant can stand as lessons to all of us.

Mr. President, throughout history the great philosophers and thinkers of our world have known that much can be learned about individuals from what they say and what others say about them.

Today, I call to the Senate's attention two quotations; one about Mary C. Simms Oliphant and the other taken from a speech given by Mary McLeod Bethune. In these words we can learn about the lives and ambitions of these two remarkable people.

Of Mary Oliphant it has been said, "She is the embodiment of the spirit of history in South Carolina." In her lifetime, she has published some 15 volumes detailing my State's heritage and great history. That is surely a gift for the generations of South Carolinians yet to come and those who are its children now.

Mary McLeod Bethune left us a firm belief in the value of education and a philosophy that encourages the human race to believe in itself and its innate goodness.

"Faith ought not to be a puny thing. * * *" she said. "If we believe, then we should believe like giants."

Mr. President, I ask unanimous consent that the speeches of Governor

Riley and Secretary Pierce be included in the RECORD at the conclusion of my remarks so that I might share more about the lives of these two women with my colleagues.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

REMARKS BY SAMUEL R. PIERCE, JR., IN TRIBUTE TO MARY MCLEOD BETHUNE

Good morning. It is a distinct pleasure to be here with you for this proud and memorable event, the induction of Mary McLeod Bethune and Mary C. Simms Oliphant into the South Carolina Hall of Fame.

It is particularly gratifying for me to be introduced by my good friend and your distinguished Senator, the Honorable Strom Thurmond. His dedicated service to our country is matched, perhaps, only by the respect and affection with which he is held by South Carolinians and all others of us who consider him a friend. I understand you were inducted into the South Carolina Hall of Fame last year, Strom, and I know it is an honor you richly deserve.

Members of the dais, honored guests, ladies and gentlemen, South Carolina has chosen wisely in selecting Mary McLeod Bethune for this great honor. This is a State of elegant beauty, from the sandy stretch of your coastline to the palatial antebellum mansions and the lush, verdant fields of the countryside. There is a quiet beauty in your towns and cities which matches well the comfortable and gracious character of your people.

There is yet a separate, more profound, beauty which is the essence of this occasion. Early in her life, Mary McLeod Bethune recognized the beauty of a mind at work . . . a mind exploring the furthest reaches of its capabilities. She recognized the freedom that can be gained through a mind unfettered by ignorance . . . the glory of a mind seeking and studying and testing new ideas. Mary McLeod Bethune understood that education and intellectual growth could enable the individual to move beyond survival, could free a person to emerge from a merely tolerable existence into the stimulating world of ideas and progress.

She wanted the strength and beauty which she knew an education and an active intellect could bring, and she worked to pursue that goal not just for herself, but for all black youth . . . indeed, for everyone she had an opportunity to inspire.

Mary McLeod Bethune was a dedicated leader. She is today an honored and respected memory of our noble and indomitable spirit . . . of our courageous heritage. She concentrated on educating and uplifting our black youth at a time when such efforts were not fashionable. Blacks were terribly deprived, and it was not always safe to encourage and support black education. We are indebted to her, for her perception and her unflagging work has added greatly to the intellectual development of so many of our countrymen.

In broadening the intellectual horizon for black youth, she brought benefit to all races and nationalities, for the contributions of a mind at work are not limited by barriers of color or geography. Bring me an idea or a plan that I can use to benefit myself and others, bring me a challenge to my intellect . . . and your color, your nationality, your sex or physical characteristics are irrelevant . . . for you brought me the beauty of a mind at work.

I am reminded of a theme used to promote contributions and support for black colleges, You probably recall it. It says: "A mind is a terrible thing to waste." Mary McLeod Bethune understood that truth. The knowledge that she was making good use of her own mind was insufficient to her purpose. She drove herself to help others do the same.

During her life, Mary McLeod Bethune reached a position of great honor and respect. She was an advisor to four Presidents. She founded the National Council of Negro Women and the Daytona Educational and Industrial School for Negro Girls, which was merged with the Cookman Institute to become Bethune-Cookman College.

We are, all of us, indebted to the many positive contributions of mind and character she bequeathed us. South Carolina does well to honor Mary McLeod Bethune by welcoming her into your Hall of Fame, and it is particularly fitting that you bestow this honor during black history month.

In closing this tribute, I quote from the "last will and testament" of Mary McLeod Bethune:

". . . I leave you finally a responsibility to our young people. The world around us really belongs to youth for youth will take over its future management. Our children must never lose their zeal for building a better world. They must not be discouraged from aspiring toward greatness, for they are to be the leaders of tomorrow.

Nor must they forget that the masses of our people are still underprivileged, ill-housed, impoverished and victimized by discrimination. We have a powerful potential in our youth, and we must have the courage to change old ideas and practices so that we may direct their power toward good ends.

"Faith, courage, brotherhood, dignity, ambition, responsibility—these are needed today as never before. We must cultivate them and use them as tools for our task of completing the establishment of equality for the Negro. We must sharpen these tools in the struggle that faces us and find new ways of using them. The freedom gates are half ajar. We must pry them fully open.

"If I have a legacy to leave my people, it is my philosophy of living and serving. As I face tomorrow, I am content, for I think I have spent my life well. I pray now that my philosophy may be helpful to those who share my vision of a world of peace, progress, brotherhood and love."

Thank you.

REMARKS BY GOVERNOR RILEY IN TRIBUTE TO MARY C. SIMMS OLIPHANT

In 1952 when the first volume of the "Letters of William Gilmore Simms" was published, the New York Times Book Review greeted it with the words. "A champagne occasion!" Thirty years later, the sixth and final volume of that great series having been published only a few months ago by the University of South Carolina Press, we celebrate another champagne occasion, as we induct the senior editor of the "Letters," Mary C. Simms Oliphant, into the South Carolina Hall of Fame.

William Gilmore Simms, Mrs. Oliphant's grandfather, as all South Carolinians know was one of America's greatest novelist, editors, and poets during the Victorian period, ranking with and honored by men like William Cullen Bryant, Washington Irving, and James Fenimore Cooper. The achievement of Mrs. Oliphant and her fellow editors, Alfred T. Odell and T.C. Duncan Eaves, in producing the "Letters of William Gilmore Simms," is by itself sufficient reason for her entry into the South Carolina Hall of Fame. The scholarly world has acclaimed the volumes as: "An astonishingly rich lode of information on Southern literature and life", as "one of the most important bodies of source material ever published in the field of Southern American Literature."

We South Carolinians are proud of that recognition, but most of us think of Mrs. Oliphant not as the editor of her grandfather's letters but as the lady who wrote our history book. Since 1917 the schoolchildren of the State have been learning its history from her, from successive texts which at first were updatings of William Gilmore Simms' 1840 "History of South Carolina" but which became with continual rewriting ever more her own. She has said she was "born loving history." We love it because of her. Because of her, in our imagination as boys and girls and today as grown-up men and women, we sail the uncharter coast of Carolina with William Hilton, explore the Back County with Henry Woodward, learn how to grow indigo with Eliza Lucas, defy the British with Sergeant Jasper at Sullivan's Island, travel the world's longest railroad from Charleston to Hamburg on "The Best Friend of Charleston", listen to the words of John C. Calhoun as he hurls defiance against Andrew Jackson, ride with Wade Hampton's Legion against the Yankees, and fight with Ben Tillman for the rights of the common man. These are just a few of the great South Carolinians she introduced to us. Indeed, because of her, we know about the men and women in the South Carolina Hall of Fame, whose company she joins today.

Summarizing the public achievement of Mary C. Simms Oliphant, the prestigious American Association of State and Local History, proclaimed: "worthy granddaughter of eminent grandsire, she learned history from her elders, encouraged her contemporaries to cherish it, and taught succeeding generations of children to love and understand it."

It is not so easy to put into words the private person of May Oliphant, as she is known to her contemporaries, "Miss May" as she is called by her juniors. Her outstanding character trait, I believe, is loyalty. Her friendship, once given, is never withdrawn. Entering Miss Euphemia McClintock's famous College for Women in Columbia shortly before World War I, although easily the most popular girl in her class, she turned down all invitations to join a social sorority, because a childhood friend who entered with her was passed by. Her loyalty to the College and to Miss McClintock has persisted throughout the years. The Hampton-Preston House in Columbia, home of the College when she attended, and the Euphemia McClintock Distinguished Chair of Southern Letters at the University of South Carolina, exist largely because of her leadership.

Her loyalty to people, to friends, and to family, finds support in her loyalty to places: to her State, of course, as is witnessed by her devotion to its history, but more particularly to Barnwell County where she was born and spent her childhood and to Greenville, where she and her husband, Alfred Drane Oliphant, settled after their marriage in 1917.

She has preserved and cherished what remains of the Simms plantation home, Woodlands (in that part of Barnwell which is now Bamberg) and the old Elias Earle

Town House on James Street in Greenville which is still her home today.

Her loyalty to Barnwell and Greenville once came near to bringing disaster to my father, who, like May Oliphant, was born in Barnwell. Running for political office in Greenville against native sons, he was not making much of his origins further down state. At a political rally, his delight at seeing May Oliphant rise turned to dismay when he heard exhort the Greenville citizens to "vote for this nice young man from Barnwell." She thought this was a double endorsement; and she must have been right, since my father won the election.

To loyalty and gracious hospitality add imagination, energy, devotion, integrity, diplomacy and common sense. Her family and friends, whom she has never hesitated to enlist in pursuing her many projects, have sometimes wondered whether they are more the victims and less the beneficiaries of her amazing qualities. She insists on their doing and being their best.

One of her friends at a discouraging time some years ago, for no particular reason that he could fathom, received from May Oliphant this message through the mail:

Tribute with love, to one who never fails a friend yet never to expediency stoops, one whose generous spirit, shines in a hum drum world, making me grateful.

This friend tells me that he has treasured this "Tribute" over the years and that it has helped him over many a rough place. But, he says, it is more fittingly a tribute to May Oliphant herself. So, if I may, let me repeat her words, slightly changed;

A Tribute from South Carolina with love to Mary C. Simms Oliphant. To one who never fails a friend yet never to expediency stoops, one whose generous spirit shines in a hum drum world, making all of us grateful.

THE DRUNK DRIVER: AN ENEMY OF THE PEOPLE

Mr. PELL. Mr. President, a short time ago the Department of Transportation reported that some 5,000 fewer Americans died on the highways in 1982 than the year before. This is good news indeed, and no doubt some of the reduction in fatalities is due to increased awareness and outrage at the cause of over half of our highway deaths: drunk driving.

Much of the increase in public consciousness can be traced to the efforts of grass roots groups like Mothers Against Drunk Drivers (MADD) and Remove Intoxicated Drivers (RID). Recently I had the pleasure of meeting with Mrs. Pauline Allard of Woonsocket, R.I., a courageous woman who founded the first chapter of MADD in Rhode Island following the tragic death of her daughter Denise in a drunk driving accident last June.

Groups like MADD have been instrumental in the passage by 34 State legislatures of tougher drunk driver laws during 1982. Congress has also played an important role in combating the drunk driver by enacting legislation I was proud to sponsor last year with Senator DANFORTH and Congressmen MICHAEL BARNES and JAMES HOWARD creating incentives for States to adopt model drunk driver laws. The work of the Presidential Commission on Drunk Driving, ably chaired by the energetic and articulate former Transportation Secretary John Volpe, has contributed to the climate of national resolve to eradicate the drunk driver from our highways.

Despite these worthwhile initiatives, much work remains to be done. Drunk drivers continue to strike disproportionately at young Americans. Of the 25,000 persons who die each year in drunk driving accidents, more than 5,000 are teenagers and over 60 percent of these teenagers are drunk at the time of the accident that kills them. The life expectancy for every age group has increased in this century, with the single exception of the 15 to 24 age bracket in which drunk driving is the leading cause of death.

With stronger legislation now in place at the Federal and State levels, efforts must be concentrated on the development of the most effective kinds of public education programs that can be directed at younger drivers who frequently combine their inexperience behind the wheel of a car with an inexperienced and unwise use of alcohol. These programs should supplement and precede traditional driver education classes in the schools. The Providence Sunday Journal for February 27 contained an excellent article describing the kind of public education programs that are necessary to reshape the way our young people view alcohol and driving. The article was prompted by a recent tragedy in which a 17-year-old girl, drunk on beer that had been bought for her by an adult, struck and killed a 13-year-old boy as he walked along the roadside after school.

I would like to share this powerful article, entitled "The Ache and Outrage When a Drunken Driver Crushes Out a Life," by Brian Dickinson, with my colleagues and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Providence Sunday Journal, Feb. 27, 1983]

THE ACHE AND OUTRAGE WHEN A DRUNKEN DRIVER CRUSHES OUT A LIFE

(Brian Dickinson)

On a bright afternoon last week—it was Tuesday, about half past two—the car sped eastward along First Avenue in East Greenwich. Later, the police would say that the 17-year-old girl behind the wheel was insensibly, incomprehensibly drunk on beer that had been bought for her by an adult. In a stupor, she seems to have swerved the car to one side, smashing into 13-year-old Todd Morsilli as he walked along the edge of the road with a cousin. In one freakish, nightmare instant, Todd was killed, and in the numbing aftermath, those of us who knew him are thinking harder about the circumstances in which such an awful event can occur.

The truisms are known: there's no guarantee against sudden, random tragedy. Every system has its anomalies, its flaws. Airplanes collide. Boats capsize. Lethal illness strikes. Maniacs can appear out of the dark, and you can break your neck from a fall in the bathtub.

All true. But when a drunken motorist careens down the road and brings sudden death or crippling injury to someone, it carries its own variety of disbelief and rage because such things simply are not supposed to happen in a civilized society. The inebriated driver is an enemy of the people, heedless of his actions as his car weaves along the highway, and when the drunk inflicts death he has become an outlaw. The teachings that promote a sense of responsibility, a sense of survival, a sense of simple prudence—all this is gone from the mind of the drunken driver. And the rest of us pay bitterly.

The costs have mounted since the automobile was born. Each year about 25,000 Americans die in highway accidents, and alcohol is involved in most of them. A vast apparatus of laws, rules, penalties and exhortations, created across the country as the extent of the risk has grown, may have kept the toll from going higher. But even the most well-meant efforts have not succeeded in bringing about a great reduction in drunk-driving fatalities: lately, in fact, the risk seems to be growing. Among American males between 15 and 24, the death rate is higher than it was 20 years ago, and auto deaths account for much of the increase.

But in recent years a conviction has spread that this level of carnage need not continue—that it is not some ghastly, inevitable extra cost attached to a modern nation. There is a growing belief that society not only should, but *can*, change itself in ways that will help keep drunks off the road.

Penalties, more police patrols, stiffer law enforcement—all this would undoubtedly help. A bill reintroduced by Sen. John C. Revens Jr., D-Warwick, which would authorize the police to set up drunk-detecting roadblocks, has received a nod of approval from Congress and deserves General Assembly adoption.

But in the view of several Rhode Island experts on highway safety, what is most needed is to reshape the way our society regards alcohol. And the place to concentrate the effort, they agree, is in the schools.

"Something has to be done to change the social behavior of children from kindergarten on," says Edward Walsh, head of the Governor's Office of Highway Safety. "Alcohol is permeating all aspects of our society, and alcohol education should start when grade school begins."

What he has in mind is shown by the efforts of the American Automobile Association, which for years has been a leader in the effort to expand alcohol-awareness units in the nation's schools. Esther M. Giammarco, driver education consultant to the state Department of Education, says the AAA approach and materials are "top-notch." They form the basis for the alcohol-awareness segment of the 30-hour mandated driver education program in all Rhode Island public high schools.

This segment, however, involves only five hours out of the 30, and Mrs. Giammarco would like to see the unit expanded. A bill to double the amount of time spent educating students to the effects of alcohol, to 10 semester hours, was introduced early this month in the state House of Representatives and deserves serious consideration.

What might help even more is for the General Assembly to mandate what Rhode Island, astonishingly, has never required—that its high school students, in order to complete driver education satisfactorily, must spend time with an instructor actually driving a car. Most states require such practical experience as part of their classes; Rhode Island does not. It should.

The driver-education units developed by the AAA are not confined to senior high schools. Robert Murray, public affairs director of the Automobile Club of Rhode Island, says a program titled "Al Cohol" has been prepared for junior high school students, and another, labeled "Starting Early," has just been prepared and is to be offered soon to all Rhode Island school superintendents.

Despite such efforts, however, every expert interviewed last week agreed that the level of school interest varies widely. Some teachers or principals are deeply committed to alcohol education, while others give it merely pro forma attention. Clearly, until Rhode Island schools can be persuaded to adopt a much broader program to educate kids about the terrible risks of drunken driving—and this would require strong policy statements at the state level—even the best programs aren't going to have an impact on all the kids who could benefit from them.

None of this can erase the pain of previous tragedies. But it may help reduce the incidence of such horrors in the future, and anyone who has lost a friend or relative to a highway drunk is convinced that the perils can be curbed if the political will can be found to act.

EXECUTIVE AND OTHER COMMUNICATIONS

The following communications were laid before the Senate, together with accompanying papers, reports, and documents, which were referred as indicated:

EC-365. A communication from the Director of the Office of Security of the General Accounting Office transmitting, pursuant to law, a report on the reclassification of a report of the General Accounting Office on November 2, 1982 (previously declassified on May 15, 1980) as "confidential" by the Drug Enforcement Administration; to the Committee on Governmental Affairs.

EC-366. A communication from the Administrator of the Environmental Protection Agency transmitting, pursuant to law, the Inspector General's report for April 1 through September 30, 1982; to the Committee on Governmental Affairs.

EC-367. A communication from the Chairman of the U.S. International Trade Commission transmitting, pursuant to law, the annual report of the Commission under the Freedom of Information Act; to the Committee on the Judiciary.

EC-368. A communication from the Acting Secretary of Health and Human Services transmitting, pursuant to law, the annual report on the Refugee Resettlement Program; to the Committee on the Judiciary.

EC-369. A communication from the Executive Director of the U.S. Holocaust Memorial Council transmitting a draft of proposed legislation authorizing appropriations to the Executive Director for necessary services; to the Committee on the Judiciary.

EC-370. A communication from the Secretary of Education transmitting a draft of proposed legislation to amend the Elementary and Secondary Education Act, the Education Consolidation and Improvement Act, and the Omnibus Budget Reconciliation Act; to the Committee on Labor and Human Resources.

EC-371. A communication from the Secretary of Education transmitting, pursuant to law, final regulations for the eligibility of foreign medical schools under guaranteed student loan program; to the Committee on Labor and Human Resources.

EC-372. A communication from the labor member and the management member of the Board of the U.S. Railroad Retirement Board transmitting, pursuant to law, a report on its determination that it must exercise 50 percent or more of its general fund borrowing authority; to the Committee on Labor and Human Resources.

EC-373. A communication from the Chairman of the National Digestive Diseases Advisory Board transmitting, pursuant to law, a report on the inadvisability of creating new institutes within the National Institutes of Health; to the Committee on Labor and Human Resources.

EC-374. A communication from the Chairman of the Board of Trustees of the Harry S. Truman Scholarship Foundation transmitting, pursuant to law, the annual report of the foundation; to the Committee on Labor and Human Resources.

EC-375. A communication from the Chairman of the National Commission for Employment Policy transmitting, pursuant to law, a report entitled "Hispanics and Jobs: Barriers to Progress"; to the Committee on Labor and Human Resources.

EC-376. A communication from the Chairman of the John F. Kennedy Center for the Performing Arts transmitting, pursuant to law, the annual report for the Center; to the Committee on Rules and Administration.

EC-377. A communication from the Public Printer transmitting, pursuant to law, the annual report of the Public Printer for fiscal 1982; to the Committee on Rules and Administration.

EC-378. A communication from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Examination of the U.S. Government Printing Office's Financial Statements for the Fiscal Years Ended September 30, 1982 and 1981;" to the Committee on Rules and Administration.

EC-379. A communication from the Executive Secretary of the Office of the Secretary of Defense transmitting, pursuant to law, a report on DOD procurement from small and other business firms for October 1982; to the Committee on Small Business.

EC-380. A communication from the Administrator of the Veterans' Administration transmitting a draft of proposed legislation authorizing a community residential care program; to the Committee on Veterans Affairs.

EC-381. A communication from the Secretary of Agriculture transmitting a draft of proposed legislation to recover costs of Federal administration of marketing agreements and orders; to the Committee on Agriculture, Nutrition, and Forestry.

EC-382. A communication from the Secretary of Agriculture transmitting a draft of proposed legislation to recover costs of market information and statistics pursuant to Cotton Statistics and Estimates Act and the Tobacco Inspection Act; to the Committee on Agriculture, Nutrition, and Forestry.

EC-383. A communication from the Secretary of Agriculture transmitting a draft of proposed legislation to repeal the mandatory price support program for honey and for tung nuts; to the Committee on Agriculture, Nutrition, and Forestry.

EC-384. A communication from the Secretary of Agriculture transmitting, pursuant to law, a report on national rural development strategy; to the Committee on Agriculture, Nutrition, and Forestry.

EC-385. A communication from the Secretary of Agriculture transmitting a draft of proposed legislation to extend certain insured and guaranteed loan programs of the Farmers Home Administration; to the Committee on Agriculture, Nutrition, and Forestry.

EC-386. A communication from the Deputy Assistant Secretary of Defense for Administration transmitting, pursuant to law, notice that the Navy intends to exclude records regarding the charter/purchase of a vessel from the United Kingdom from examination by the General Accounting Office; to the Committee on Armed Services.

EC-387. A communication from the Acting Secretary of the Air Force transmitting, pursuant to law, a report that four weapons systems have exceeded their baseline unit costs by more than 15 percent; to the Committee on Armed Services.

EC-388. A communication from the Assistant Secretary of the Navy for Shipbuilding and Logistics transmitting, pursuant to law, a report on a decision made to convert the cold storage function at the Naval Supply Center, Oakland, Calif., to performance under contract; to the Committee on Armed Services.

EC-389. A communication from the General Counsel of the Department of Defense transmitting a draft of proposed legislation to repeal the requirement to solicit suggestions from certain military and civilian retirees for methods to improve procurement procedures; to the Committee on Armed Services.

EC-390. A communication from the Assistant Secretary of State for Congressional Relations transmitting, pursuant to law, the annual report on the Panama Canal Treaties of 1977 for October 1, 1981 through September 30, 1982; to the Committee on Armed Services.

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. DOLE, from the Committee on Finance:

Margaret M. Heckler, of Massachusetts, to be Secretary of Health and Human Services; and

John A. Svahn, of Maryland, to be Under Secretary of Health and Human Services.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. BYRD:

S. 647. A bill to amend the Trade Act of 1974 to ensure fair trade opportunities, and for other purposes; to the Committee on Finance.

By Mr. THURMOND:

S. 648. A bill to facilitate the exchange of certain lands in South Carolina; to the Committee on Energy and Natural Resources.

By Mr. HATCH (for himself, Mr. PERCY and Mrs. HAWKINS):

S. 649. A bill to encourage the employment of unemployed individuals by the private sector by furnishing training assistance for them to fill available jobs, and for other purposes; to the Committee on Labor and Human Resources.

By Mr. MATHIAS:

S. 650. A bill to raise the retirement age for Superior Court judges in the District of Columbia; to the Committee on the Judiciary.

By Mr. MATHIAS:

S. 651. A bill to amend the Foreign Service Act of 1980 with respect to the number of Chiefs of diplomatic mission who are career members of the Foreign Service; to the Committee on Foreign Relations.

By Mr. MATSUNAGA:

S. 652. A bill to establish a hydrogen research and development program; to the Committee on Energy and Natural Resources.

By Mr. JACKSON (for himself and Mr. TOWER):

S. 653. A bill to amend chapter 104, title 10, United States Code, to establish the Foundation for the Advancement of Military Medicine and for other purposes; to the Committee on Armed Services.

By Mr. WALLOP (for himself, Mr. ARMSTRONG, Mr. SYMMS, Mr. BOREN, Mr. DURENBERGER, Mr. DANFORTH, Mr. ROTH, Mr. GLENN, Mr. HEINZ, Mr. PACKWOOD and Mr. CHAFEE):

S. 654. A bill to amend the Internal Revenue Code of 1954 to treat deductions for research and experimental expenses attributable to activities conducted in the United States as allocable to income from sources within the United States; to the Committee on Finance.

By Mr. PELL (for himself, Mr. BIDEN, Mr. DODD, Mr. HOLLINGS, Mr. HUMPHREY, Mr. INOUYE, Mr. JACKSON, Mr. RIEGLE, Mr. SARBANES, Mr. TSONGAS and Mr. CHAFEE):

S. 655. A bill to authorize appropriations to carry out the National Sea Grant program for fiscal years 1984, 1985, and 1986, and for other purposes; to the Committee on Commerce, Science, and Transportation and the Committee on Labor and Human Resources, jointly, by unanimous consent.

By Mr. RIEGLE:

S. 656. A bill to provide that no interest shall be charged on loans to State unemployment funds in the case of States which enact certain State unemployment compensation provisions, and to revise the criteria applicable to the cap on FUTA Tax credit reductions; to the Committee on Finance.

By Mr. DOLE (for himself, Mr. MELCHER, Mr. RANDOLPH, Mr. HEINZ, Mr. PERCY, and Mr. STEVENS):

S. 657. A bill to amend the Animal Welfare Act to ensure the proper treatment of laboratory animals; to the Committee on Agriculture, Nutrition, and Forestry.

By Mrs. HAWKINS (for herself, Mr. CHAFEE, and Mr. SYMMS):

S. 658. A bill to amend the Agricultural Act of 1949 to modify the dairy price support program for the 1983 through 1985 fiscal years, and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. THURMOND (for himself, Mr. ABDNOR, Mr. ANDREWS, Mr. BUMPERS, Mr. BURDICK, Mr. CHILES, Mr. D'AMATO, Mr. DECONCINI, Mr. DOMENICI Mr. DURENBERGER, Mr. EAST, Mr. EXON, Mr. GOLDWATER, Mr. HATFIELD, Mr. HEINZ, Mr. HELMS, Mr. HOLLINGS, Mr. HUDDLESTON, Mr. INOUYE, Mr. JOHNSTON, Mr. LAXALT, Mr. LUGAR, Mr. MATTINGLY, Mr. MELCHER, Mr. NUNN, Mr. PERCY, Mr. PRYOR, Mr. RANDOLPH, Mr. STENNIS, Mr. TSONGAS, Mr. WARNER, and Mr. JEPSEN):

S.J. Res. 44. Joint resolution to authorize the President to issue a proclamation designating the week beginning on March 11, 1984, as "National Surveyors Week."; to the Committee on the Judiciary.

By Mr. BURDICK:

S.J. Res. 45. Joint resolution designating November 20 through 26, 1983 as "National Family Week"; to the Committee on the Judiciary.

By Mr. CRANSTON:

S.J. Res. 46. Joint resolution requiring the Federal Energy Regulatory Commission to commence a rulemaking relating to natural gas pipeline rate designs, and to report its findings, conclusions and recommendations; to the Committee on Energy and Natural Resources.

SUBMISSION OF CONCURRENT AND SENATE RESOLUTIONS

The following concurrent resolutions and Senate resolutions were read, and referred (or acted upon), as indicated:

By Mr. D'AMATO (for himself, Mr. HEINZ, Mr. DIXON, Mr. MOYNIHAN, and Mr. LAUTENBERG):

S. Res. 77. Resolution disapproving deferral D83-59 relating to Urban Mass Transportation Administration; to the Committee on the Budget and the Committee on Appropriations, jointly, pursuant to the order of January 30, 1975, to be reported by the Committee on Appropriations pursuant to the provisions of S. Res. 45 of the 94th Congress.

By Mr. BAKER (for himself and Mr. BYRD):

S. Res. 78. Resolution to authorize the Secretary of the Senate to withhold from salaries of Senate pages, and deposit in the House revolving fund for pages, amounts equal to the charges imposed on pages residing in the page residence hall; considered and agreed to.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. BYRD:

S. 647. A bill to amend the Trade Act of 1974 to insure fair trade opportunities, and for other purposes; to the Committee on Finance.

(The remarks of Mr. BYRD on this legislation appear earlier in today's RECORD.)

By Mr. THURMOND:

S. 648. A bill to facilitate the exchange of certain lands in South Carolina; to the Committee on Energy and Natural Resources.

EXCHANGE OF CERTAIN LANDS IN SOUTH CAROLINA

Mr. THURMOND. Mr. President, today I am introducing legislation to enable the U.S. Forest Service to add 210 acres of land to the Francis Marion National Forest in exchange for other forest acreage which has become part of a hydroelectric project. The legislation would accomplish this purpose by relieving the hydroelectric project of the obligation to pay rent to the Federal Government on the forest acreage which will be conveyed to it.

The Francis Marion National Forest is located in South Carolina between two great watercourses, the Santee and Cooper Rivers. Those two rivers are the site of an important hydroelectric development, known as the Santee-Cooper project. As part of the Santee-Cooper project, the project's owner and operator, South Carolina Public Service Authority, uses 1,276 acres of Francis Marion National Forest land, most of which is under water. This land is of no use to the U.S. Forest Service.

Nonetheless, in accordance with the license issued to the authority by the Federal Energy Regulatory Commission, and in accordance with the regulations of that Commission, the authority pays an annual charge or rent for the use of those lands, Currently the annual rent is $13,454 per year.

The Forest Service and the authority have agreed upon a cooperative plan which can benefit both. In brief, the Forest Service proposes a land exchange with the authority whereby the Forest Service would convey to the authority the 1,276 acres which it is flooding. In return, the authority would convey to the Forest Service a 210-acre tract located directly across from the Forest Service headquarters within the Francis Marion National Forest. The Forest Service and the authority have agreed to the exchange subject to the approval of the Commission.

In an order issued on April 16, 1981, the Commission approved the proposal of the Forest Service to convey the 1,276 acres of land to the authority.

Mr. President, unless Congress passes this enabling legislation, the land exchange cannot be accomplished, notwithstanding the lack of any objection from the parties to the proposed transaction. The lands which the Forest Service wishes to convey are within the boundaries of a licensed power project and they are withdrawn from disposition under the public land laws in accordance with section 24 of the Federal Power Act, 16 U.S.C. section 818. When the Commission approved the proposed land exchange, it advised the Forest Service that it did not have authority to vacate the power withdrawal which had attached to the lands and that therefore the authority would have to continue paying annual charges or rent for those lands even though the authority acquired fee title to the lands from the Forest Service.

Not surprisingly, the authority is unwilling to exchange any lands with the Forest Service if it would have to continue paying rent for the lands it received in the exchange.

An exchange of lands, which all concerned recognize will be a mutually beneficial arrangement, is being thwarted because of a 1920 law which was enacted for other purposes. The lands in question, however, have already been developed as part of a power project licensed by the Commission. The project includes nearly 150,000 acres owned by the authority in addition to the 1,276 acres of Forest Service lands.

The legislation which I am introducing applies only to the Santee-Cooper project and would apply only to the proposed land exchange I have described. The legislation, if enacted, would simply mean that the authority would not have to continue paying rent to the Federal Government in order to use any lands which it acquires from the Federal Government as long as the head of the Federal agency conveying the lands advises the Commission that it has received adequate consideration in lieu of annual charges.

The legislation would, of course, achieve a broader and more important objective. The Francis Marion National Forest pays two South Carolina counties over $1.4 million yearly for timber sold in the forest. In these difficult times, this contribution is important to South Carolina local governments in providing schools and road systems. The legislation I am intrdoucing will facilitiate the addition of a very valuable tract of land to the Francis Marion National Forest through the traditional vehicle of a simple exchange of lands.

Mr. President, I call upon my colleagues to carefully consider the merits and necessity of this measure. I ask unanimous consent that the bill be printed in the RECORD immediately following my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 648

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That no charge shall be made under section 10(e) of the Federal Power Act, 16 U.S.C. section 803(e) (1976), for the use of any interest of the United States in lands lying within the boundary of the South Carolina Public Service Authority's Santee-Cooper Hydroelectric Project (Federal Energy Regulatory Commission licensed Project No. 199) which pursuant to a Commission determination under Section 24 of the Federal Power Act, 16 U.S.C. section 818 (1976), are hereafter conveyed by the United States directly to the licensee for that project subject to the power reservation in said Section 24, if the head of the Federal agency conveying the lands advises the Commission that it has received adequate consideration in lieu of annual charges.

By Mr. HATCH (for himself, Mr. PERCY, and Mrs. HAWKINS):

S. 649. A bill to encourage the employment of unemployed individuals by the private sector by furnishing training assistance for them to fill available jobs, and for other purposes; to the Committee on Labor and Human Resources.

EMERGENCY STRUCTURAL UNEMPLOYMENT RELIEF ACT OF 1983

Mr. HATCH. Mr. President, I am today introducing a bill which I believe is a responsible, intermediate step to assist workers in finding immediate employment opportunities. The Emergency Structural Unemployment Relief Act will make funds immediately available to employers through the States to train and retrain structurally unemployed and displaced workers for jobs which exist right now.

Ending unemployment is and should be uppermost on the minds of the Members of this distinguished body. In my own State of Utah, the unemployment rate exceeds 8 percent, which, while better than some areas, obviously is too high. Over the last several weeks my colleagues and I have heard hours of testimony concerning possible Federal solutions to our national unemployment. The experts seem to agree on but two points: First, that a healthy economy is the only permanent solution to high unemployment, and second, that short-term public sector employment programs do not work. Experts from Congressional Budget Director Alice Rivlin to Martin Feldstein, chairman of the Council of Economic Advisors, all agree that public sector job measures are more political placebos than strong, economic medicine. They do not provide long-term employment opportunities and their cost drains the limited investment capital needed to create permanent private sector jobs.

Consequently, to avoid the costly mistakes of the past, any emergency employment legislation that we consider must complement, not impede, the administration's existing economic program and must augment, not supplement, the Job Training Partnership Act of 1982.

Last year Congress enacted the Job Training Partnership Act. This legislation, ably shepherded through the Senate by Senator QUAYLE, is a milestone in Federal employment and training policy. I was pleased to have played a role in the enactment of this law and I will be proud to see it implemented. The JTPA has the potential to serve the labor market needs of individual substate areas over the long term, and, once implemented, measures like the one I am proposing today no longer will be needed.

The bill I am introducing does not change one word of the Job Training Partnership Act. It does not amend the structure or purpose of that important new program. Instead, the Emergency Structural Unemployment Relief Act is intended to serve in the interim period while the programs envisioned by the JTPA are being designed by States, local governments and private industry councils. The mechanisms through which JTPA services will be delivered are now being developed and put into place, but the process will take some time if it is to be done effectively, and it will not be operational until October 1. The proposal I have suggested will make funds immediately available to States for allocation as training grants directly to employers who have committed to hire one or more structurally unemployed or dislocated workers. It will assist in matching up willing workers and employers with jobs to offer.

Many businesses have openings now, but there are shortages of people with the qualifications needed to fill them. A brief survey of three major city daily newspapers on Thursday, February 17, showed that there were over 800 help wanted advertisements in New York City, 800 in Washington, and 1,500 in Los Angeles. Many of these advertisements asked for applicants for more than one position. If this seems at the outset like a drop in the bucket, let us remember that the public employment proposals being circulated and most likely to pass, call for spending more than three times as much as the $1.5 billion I am suggesting, for less than 500,000 jobs which are not permanent positions and do not provide any training or retraining. People employed in one of these jobs will be just as unemployed when the authorization for the public employment program expires. If we accept $3 to $4 billion for public employment projects, then we should at least make the second phase of our employment program one of training and placement in private sector jobs we know are waiting to be filled.

I envision the program to work in this way, Mr. President. First, the entire amount of the appropriation would be allocated to States by means of the same needs-based formula we agreed upon for the Job Training Partnership Act. This formula was chosen since the factors are appropriate to the purpose of the bill and also because the Department of Labor has already accumulated the data and programed it into their computer. The allotments, therefore, should not take much time. Funds can be available within weeks after the appropriation has been passed.

Second, States using up to 15 percent of the State grant for administration would ask for its local employ-

ment service and unemployment insurance offices to issue written certifications to unemployed persons determined to be structurally unemployed, that is, those who do not possess marketable job skills, or those whose skills are no longer in demand in that area.

Third, businesses of any size which had job openings and committed to hire a worker with a certification from the ES or UI office, regardless of the individual's skills, or lack thereof, could request a training grant from the State. The grant application would be simple and would basically consist of the number and types of jobs the employer was offering and a requested amount to cover the training costs. Training could be done by the employer or could be contracted out by the employer to a training organization. Obviously, the employer would submit employment-training proposals which were in line with the nature of the job he was offering.

Finally, the Governor, or his designated official, would make the training grants on the basis of general criteria which is written into the bill, such as the job's potential for upward mobility, the economic conditions in the area of the State, whether the proposal was to retrain workers who would have been permanently laid off for different jobs with the same firm, and, of course, the cost of the training per placement.

The Governor would submit to the Secretary a report on the number and types of jobs for which employers applied for training grants and did not receive them. The Governor would account for all dispersements.

Last, but not least, the bill also contains a $15 million authorization for the Secretary of Labor to fund additional programs for in-school youth. I have become convinced that we are missing the boat if we aim all of our attention and resources at those who are now in dire need of training for a future and forget those youth who are still in school, but are headed for a lifetime of hopelessness. These young people can be identified and singled out for special counseling and training. Our country has many such programs, such as the jobs for America's graduates program now operating in eight states, which can pick up these young people before they fall.

Mr. President, I urge my colleagues to join me in this effort. If we are going to have an emergency appropriation for emergency jobs and emergency humanitarian aid, then the second step ought to be bridging the gap before the Job Training Partnership Act is fully operational with an emergency structural unemployment relief bill.

I want to thank my distinguished friends and colleagues, Senators CHARLES PERCY and PAULA HAWKINS, for cosponsorship of this bill. They have long been concerned about the plight of the unemployed and have worked long and hard on behalf of their constituents in Illinois and Florida. I urge all of my colleagues in the Senate to consider the merit of this proposal and join us in securing its prompt passage.

Mr. President, I ask unanimous consent that the text of this legislation be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 649

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Emergency Structural Unemployment Relief Act of 1983".

STATEMENT OF PURPOSE

SEC. 2. It is the purpose of this Act—

(1) to encourage the rapid employment of certified unemployed individuals in the private sector by furnishing training to such unemployed individuals and by expediting specific training for which there is a demonstrated need; and

(2) to prevent the potential increase in unemployment of youth through a program of in-school guidance and training.

DEFINITIONS

SEC. 3. As used in this Act—

(1) The term "area of substantial unemployment" has the same meaning given that term by section 4 (3) of the Job Training Partnership Act.

(2) The term "general training" means training for employment in an occupation, a paraprofessional position, or a skilled job classification.

(3) The term "Governor" means the chief executive of any State.

(4) The term "institution of higher education" has the same meaning given that term by section 1201(a) of the Higher Education Act of 1965.

(5) The term "local educational agency" has the same meaning given that term by section 195(10) of the Vocational Education Act of 1963.

(6) The term "post secondary educational institution" means any institution covered by the definition of the term of institution of higher education defined in section 481(a)(1) of the Higher Education Act of 1965.

(7) The term "service provider" means any public agency, private business concern, or nonprofit private organization, which provides training services on a contractual basis, and may include any community based organization, labor organization, trade association, local educational agency, institutions of higher education and other post secondary educational institution.

(8) The term "specific training" means training in skills which are uniquely required for a specific workforce or specific workplace.

(9) The term "Secretary" means the Secretary of Labor.

(10) The term "State" means any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, the Northern Mariana Islands, American Samoa, and the Trust Territory of the Pacific Islands.

(11) The term "supportive services" has the same meaning given that term under section 4(24) of the Job Training Partnership Act.

(12) The term "unemployed individuals" means individuals who are without jobs and who want and are available for work. The determination of whether individuals are without jobs shall be made in accordance with the criteria used by the Bureau of Labor Statistics of the Department of Labor in defining individuals as unemployed.

TITLE I—TRAINING BLOCK GRANTS

AUTHORIZATIONS OF APPROPRIATIONS

SEC. 101. (a) There are authorized to be appropriated $1,500,000,000 for the period beginning on the date of enactment of this Act through September 30, 1984 to carry out the provisions of this title.

(b)(1) Funds appropriated pursuant to subsection (a) may be obligated and expended until September 30, 1984.

(2) Funds appropriated pursuant to subsection (a) but not obligated or expended prior to September 30, 1984 may be obligated and expended pursuant to the provisions of part A of title II or title III of the Job Training Partnership Act or both.

ALLOTMENT

SEC. 102. (a) Not more than $2,500,000 of the amount appropriated pursuant to section 101(a) for each fiscal year shall be allotted among Guam, the Virgin Islands, American Samoa, the Trust Territory of the Pacific Islands, and the Northern Mariana Islands.

(b)(1) Subject to the provisions of paragraph (2), of the remainder of the amount available for this title for each fiscal year—

(A) 33⅓ percent shall be allotted on the basis of the relative number of unemployed individuals in areas of substantial unemployment in each State as compared to the total number of such unemployed individuals in all such areas of substantial unemployment in all the States;

(B) 33⅓ percent shall be allotted on the basis of the relative excess number of unemployed individuals who reside in each State as compared to the total excess number of unemployed individuals in all the States; and

(C) 33⅓ percent shall be allotted on the basis of the relative number of economically disadvantaged individuals within the State compared to the total number of economically disadvantaged individuals in all States, except that, for the allotment for any State in which there is any service delivery area described in section 101(a)(4)(A)(iii) of the Job Training Partnership Act, the allotment shall be based on the higher of the number of adults in families with an income below the low-income level in such area or the number of economically disadvantaged individuals in such area.

(2) No State shall receive less than one-quarter of 1 percent of the amounts available for allotment under this subsection for each such fiscal year.

(3) For purposes of paragraph (1)—

(A) the term "excess number" means the number which represents the number of unemployed individuals in excess of 4.5 percent of the civilian labor force in the State, or the number which represents the number of unemployed individuals in excess of 4.5 percent of the civilian labor force in areas of substantial unemployment in such State; and

(B) the term "economically disadvantaged" means an individual who has, or is a member of a family which has, received a total family income (exclusive of unemploy-

ment compensation, child support payments, and welfare payments) which, in relation to family size, was not in excess of the higher of (i) the poverty level determined in accordance with criteria established by the Director of the Office of Management and Budget, or (ii) 70 percent of the lower living standard income level.

(4) The Secretary shall determine allotments under this section not later than 15 days after the date of enactment of this Act.

ELIGIBLE UNEMPLOYED INDIVIDUALS

SEC. 103. (a) An unemployed individual is eligible to participate in the program under this Act if the appropriate office of the United States Employment Service in the State or the State agency established pursuant to title III of the Social Security Act determines that the individual is unemployed because—

(1) the individual lacks job skills, or

(2) the individual has job skills which are no longer in demand in the labor market area in which the individual resides.

(b) The State office of the United States Employment Service and the State agency under title III of the Social Security Act shall issue a written certification to any individual who applies for a certification and meets the requirements of subsection (a).

USES OF TRAINING BLOCK GRANTS

SEC. 104. Grants under this title may be used for training assistance payments to business concerns in accordance with the application approved under section 105 and other provisions of this title.

APPLICATIONS

SEC. 105. Each State desiring to receive a block grant under this title shall submit an application to the Secretary. Each such application shall—

(1) designate an agency of the State to be determined by the Governor to administer the training block grant authorized by this Act, and describe the arrangement for the certification of the eligible unemployed individuals by the local offices of the State Office of the United States Employment Service and of the State agency under title III of the Social Security Act;

(2) provide for a State program for furnishing training payments to each business concern which—

(A) applies to the agency designated under clause (1) for a training grant for each eligible unemployed individual hired by such business concern;

(B) describes in the application the job for which each such individual is hired, together with a reasonable estimate of the general and specific training costs requested in the application; and

(C) describes, if applicable, in the application the contractual arrangements under which service providers will provide training to each such individual;

(3) describe the procedures under which the designated agency will evaluate the applications received under clause (1) which procedures will include a consideration of—

(A) the economic conditions of the area where the business concern is located;

(B) the potential of trainees to advance in the business concern;

(C) the cost and quality of the training per placement of eligible unemployed individuals; and

(D) whether the application is for the retraining of one or more of the employees of the business concern;

(4) provide assurances that no funds paid under this title to the State may be used to pay the business concern for wages, salaries, benefits, or supportive services of participants;

(5) provide assurances that not to exceed 15 percent of the State's allotment will be used for administrative costs under the application, including expenses of the State office of the United States Employment Service and the State agency under title III of the Social Security Act;

(6) provide assurances that the State will establish procedures and carry out the restrictions contained in section 106;

(7) provide such fiscal control and funds accounting procedures as may be necessary to assure the proper disbursal of and accounting for Federal funds paid to a State under this Act; and

(8) provide that a report will be filed with the Secretary at the end of the fiscal year 1984 describing—

(A) the number of jobs for which training grants were awarded,

(B) the number of jobs filled within certain occupational and industrial categories,

(C) the number of jobs for which training grants were not awarded, and

(D) the number of employers who applied and the number of employers who received grants.

(b) The Secretary shall approve any State application which meets the requirements of subsection (a) of this section within 20 days after the receipt of the application.

RESTRICTIONS AND ADJUDICATIONS

SEC. 106. (a)(1) Each business concern which discharges an eligible unemployed individual who is a participant in the training grant program authorized by this title without cause after the business concern received a payment under this title shall be ineligible to receive any further payments under this title.

(2) Each business concern which—

(A) discharges a participant in the training program assisted under this title in violation of the provisions of this title and the discharge;

(B) is determined to be in violation of a provision of this title, or application approved under this title, by a court of competent jurisdiction or by an administrative agency of a State having authority to make the determination,

shall repay to the State the cost of the training payment made by the State to that business employer for the individual discharged in violation of such provisions.

(b)(1) Each eligible unemployed individual on whose behalf a business concern receives a training payment pursuant to the provisions of this title and who voluntarily leaves the job for which the training costs were paid during the period of training under this title shall be ineligible to receive unemployment compensation benefits for the six-month period beginning on the date on which such individual leaves the job.

(2) Any individual whose entitlement to unemployment compensation benefits is suspended by reason of paragraph (1) may bring a civil action in a court of competent jurisdiction or an action in a State agency having authority to make the determination to show cause why the individual should not be subject to paragraph (1).

PAYMENTS

SEC. 107. (a) From the amount allotted to each State pursuant to section 102, the Secretary shall, in accordance with the provisions of this Act, pay to the State an amount equal to the amount needed for the purposes set forth pursuant to section 105.

(b) Payments under this Act may be made in installments in advance or by way of reimbursement, with necessary adjustments on account of overpayments and underpayments.

WITHHOLDING

SEC. 108. Whenever the Secretary, after reasonable notice to any State and opportunity for hearing within the State, finds that there has been a failure to comply with any provision set forth under section 105 or under section 106, the Secretary shall notify the State that further payments will not be made under this Act until the Secretary is satisfied that there is no longer any such failure to comply. Until the Secretary is so satisfied, no further payments shall be made under this title.

AUDIT

SEC. 109. The Comptroller General of the United States, and any of his duly authorized representatives, shall have access for the purpose of audit and examination to any books, documents, papers, and records of any applicant and any contractee receiving assistance under this Act that are pertinent to the sums received and disbursed under this Act.

NONDISCRIMINATION PROVISIONS

SEC. 110. (a) No person shall on the ground of race, color, national origin, or sex be excluded from participation in, be denied the benefits of, or be subjected to discrimination under, any program or activity funded in whole or in part with funds made available under this title. Any prohibition against discrimination on the basis of and under the Age Discrimination Act of 1975 or with respect to otherwise qualified handicapped individual as provided in section 504 of the Rehabilitation Act of 1973 shall also apply to any such program or activity.

(b) Whenever the Secretary determines that a State that has received a payment under this title has failed to comply with subsection (a) or an applicable regulation, he shall notify the Governor of the State and shall request him to secure compliance. If within a reasonable period of time, not to exceed 60 days, the Governor fails or refuses to secure compliance, the Secretary is authorized to (1) refer the matter to the Attorney General with a recommendation that an appropriate civil action be instituted; (2) exercise the powers and functions provided by title VI of the Civil Rights Act of 1964, the Age Discrimination Act of 1975, or section 504 of the Rehabilitation Act of 1973, as may be applicable; or (3) take such other action as may be provided by law.

(c) When a matter is referred to the Attorney General pursuant to subsection (b), or whenever he has reason to believe that the State is engaged in a pattern or practice in violation of the provisions of this section, the Attorney General may bring a civil action in any appropriate United States district court for such relief as may be appropriate, including injunctive relief.

ADMINISTRATION

SEC. 111. (a)(1) The Secretary may delegate any functions under this Act, except the making of regulations, to any officer or employee of the Department of Labor.

(2) The Secretary shall issue regulations under this Act, within 30 days after the date on which an appropriation Act appropriating funds to carry out this title is enacted.

(b) In administering the provisions of this Act, the Secretary is authorized to utilize the services and facilities of any agency of the Federal Government and of any other

public agency or institution, to the extent such services and facilities are otherwise authorized to be made available for such purpose, in accordance with appropriate agreements, and to pay for such services either in advance or by way of reimbursement as may be agreed upon.

(c) The Secretary shall establish procedures for Federal monitoring of State administration of programs assisted under this Act.

TITLE II—EMPLOYMENT GUIDANCE PROGRAMS FOR SECONDARY SCHOOL YOUTH

PROGRAM AUTHORIZED

SEC. 201. (a) The Secretary is authorized to make grants to public agencies and nonprofit private organizations with special competence in job training and counseling of secondary school students (such as Jobs for American Graduates, Inc.) for the purpose of establishing and carrying out programs for job training, counseling, remedial education, and placement services in secondary schools to enhance the employability of secondary school students.

(b) There is authorized to be appropriated $15,000,000 for the fiscal year 1983. Funds appropriated pursuant to this section may be available for obligation and expenditure in the succeeding fiscal year.

APPLICATION

SEC. 202. (a) No grant may be made under this title unless an application is made therefor, at such time, in such manner, and containing or accompanied by such information as the Secretary may reasonably require.

(b) In approving applications under this title, the Secretary, to the extent practicable, shall attempt to obtain equitable distributions of assistance among the fifty States and the District of Columbia.

By Mr. MATHIAS:

S. 650. A bill to raise the retirement age for Superior Court judges in the District of Columbia; to the Committee on the Judiciary.

RETIREMENT AGE OF SUPERIOR COURT JUDGES

● Mr. MATHIAS. Mr. President, I am today introducing legislation which would amend the District of Columbia Code to increase the mandatory retirement age of judges of the District of Columbia courts from ages 70 to 74.

Under the present law, the District of Columbia Code makes it mandatory that judges of the Superior Court and the District of Columbia Court of Appeals retire at age 70. As a result of this law, the courts have lost the invaluable services of experienced judges who were, at the date of their retirement, in excellent physical and mental condition and who wanted to continue to serve on the bench.

The effect of the mandatory retirement age of 70, without regard to a judge's mental and physical condition, has been to deprive the District of Columbia of the much-needed special skills and expertise of its most senior superior court and District of Columbia Court of Appeals judges.

Mr. President, I believe enactment of this legislation will help to relieve shortages of judges and greatly ease delay in disposition of the enormous caseloads facing the local courts. I urge my colleagues to consider this matter promptly and favorably.●

By Mr. MATHIAS:

S. 651. A bill to amend the Foreign Service Act of 1980 with respect to the number of chiefs of diplomatic mission who are career members of the Foreign Service; to the Committee on Foreign Relations.

CHIEFS OF DIPLOMATIC MISSIONS

Mr. MATHIAS. Mr. President, for several years I have advocated placing statutory restrictions on the percentage of nonprofessionals appointed to ambassadorial rank as chiefs of U.S. diplomatic missions. In 1974, I proposed to the Senate that a 20-percent ceiling be placed on noncareer ambassadorial appointments. This amendment passed the Senate on October 2, 1974, but did not survive conference. In 1975, the idea was revived in my bill, S. 202, and in a separate Foreign Relations Committee proposal. These measures were considered by the committee but not adopted.

In 1976, I introduced an amendment to the State Department authorization bill proposing a limit of 15 percent for political ambassadorial appointees. In conference it was weakened and emerged, in diluted form, in Public Law 94-350 of July 12, 1976. Section 120 of the law declares:

It is the sense of the Congress that a greater number of positions of ambassador should be occupied by career personnel in the Foreign Service.

As of mid-October 1981, 9 months into President Reagan's administration, 44 percent of the President's ambassadorial appointments had gone to individuals outside of the career Foreign Service, although comprehensive figures including retained ambassadors were not so high. Nonetheless, a disturbing trend was apparent: If political appointments were to continue at this rate, the Reagan administration would have the highest percentage of nonprofessional chiefs of mission of any administration in the postwar period.

In response to this trend I introduced S. 1886, a bill to limit to 15 percent the percentage of political appointees to the position of chief of diplomatic mission. Hearings were held in April 1982 by the Senate Foreign Relations Committee, and a number of constructive criticisms were made of the bill. Some witnesses felt that it went too far, infringing on Presidential prerogatives or the constitutional appointment process. Others felt that it set the limit on noncareer chiefs of mission too low. Still others suggested that the bill did not go far enough, that it did not address the problem of the growing number of noncareer officals within the Department of State at the Assistant Secretary level and below, and that it did not provide for a more thorough review process to insure competence among political and nonpolitical appointees.

The measure was not adopted by the committee. Yet the trend of excessive political appointments continues, as the following chart provided by the American Foreign Service Association demonstrates.

	Number career	Number non-career	Percent career	Percent non-career
President:				
Truman	115	63	65	35
Eisenhower	156	72	68	32
Kennedy	72	52	58	42
Johnson	94	56	63	37
Nixon	157	73	68	32
Ford	47	29	62	38
Carter	141	52	73	27
Reagan	66	46	58	42
Total	848	443	65	35

There are, of course, other nonlegislative solutions to this problem. The most simple would be a policy determination by the Executive to support the principle of career appointment with a few meritorious exceptions. Another would be the acquisition by the Senate of the fortitude and resolve to examine the personal and professional qualifications of the diplomatic nominees as specifically related to the posts for which they are proposed. In short, the Senate could find the courage to say "No." Pending the day that either course is followed, we should pursue a legislative remedy.

I do not mean to imply that the United States has not greatly benefited from the services of some distinguished diplomats who were appointed from outside the ranks of the career Foreign Services. Such able and dedicated men and women as Ellsworth Bunker, John Sherman Cooper, Shirley Temple Black, Averell Harriman, and the late David K. E. Bruce brought to their ambassadorial positions great energy, skill, and experience. Mike Mansfield, our present Ambassador in Japan, is an exceptional example of the breed. These individuals are beyond price. But the Foreign Service was not what Mae West had in mind when she said, "Too much of a good thing is wonderful."

At the moment we have only three professional ambassadors in Western Europe. That means we have a team of highly trained, highly motivated, and experienced diplomats in Washington, underemployed and planning to leave the Foreign Service at the very moment that their competence is at the peak. Bright young men and women in the Service see their seniors in the corridors and cafeterias of the State Department and understand what has happened to their careers. The effect on their morale is devastating.

The professional Foreign Service is comprised of a relatively small cadre

of highly trained, very dedicated men and women. They endure countless hardships—frequent relocations, difficult living conditions, disruptions in family life and increasingly, personal danger—in the service of the United States. It is unthinkable to deny such men and women access, through normal promotion, to the highest positions of their profession. Yet that is the trend.

I believe that the Senate in its special responsibility in the area of foreign affairs should amend the Foreign Service Act of 1980 to reverse this trend. To accomplish this, I am again introducing a bill to limit the percentage of political appointees to the position of chief of diplomatic mission to 15 percent.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 651

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 304(a) of the Foreign Service Act of 1980 is amended by adding at the end thereof the following:

"(5) At any time, not less than 85 per centum of the total number of positions of chiefs of mission which are occupied shall be held by career members of the Service.".

By Mr. MATSUNAGA:

S. 652. A bill to establish a hydrogen research and development program; to the Committee on Energy and Natural Resources.

HYDROGEN RESEARCH AND DEVELOPMENT ACT

Mr. MATSUNAGA. Madame President, I am today introducing a bill to provide for the establishment of an expanded and intensified research and development program to accelerate the commercialization of the hydrogen economy.

The timing of the introduction of this measure is most appropriate, for the provisions of the bill address and attempt to resolve some of the problems we are having with national defense and energy in a manner which is in tune with the philosophy of the present administration, which has articulated its support for basic research and development of those potential energy sources which, by their very innovativeness, are deemed too risky for unilateral commercialization by the private sector, but yet show promise for having a major impact on the well-being of the Nation.

The ultimate impact of this bill will be to reduce oil importation, an economically debilitating dependence which has been bleeding our Nation at a rate of as much as $80 billion each year. The defense implications are partially related to development of the next generation of jet fuel, and partially tied to the concept of energy self-sufficiency, both of critical importance to our national security.

Another reason is that most of the other industrialized countries are carrying on hydrogen R&D activity at a level considerably greater than ours. While AEG-Telefunkun of West Germany once proposed a $50 trillion, 60-year solar photovoltaic/hydrogen plantation program, and an all-party Canadian Commons Committee recommended an expenditure of $1 billion over the next 5 years to develop a hydrogen system to make our neighbors to the north a world leader in hydrogen development, our own domestic program has declined from $28 million in fiscal year 1977 to an expected $15 million in this fiscal year.

The sad truth is that here in our great country there is currently no specific Federal program for the development of hydrogen as fuel for air or ground transportation. To worsen the situation, whatever disparate projects there are appear to be in various stages of termination.

How is it that a technology that was virtually born in these United States can suffer such retrogression in the face of significant foreign advancements? It was nearly a decade ago that Fortune magazine reported on the promise of the "hydrogen economy." The very first professional meeting to consider the entire field of hydrogen-related research comprehensively was held in this country in 1974. Demonstrations of a hydrogen-fueled automobile and hydrogen-operated homestead were conducted shortly thereafter. NASA has very successfully applied the technology in the space race, including the Space Shuttle, which was hydrogen-driven into space. Unfortunately, spinoffs have not been projected into the commercial sector.

Worldwide, the Netherlands has pioneered work on metal hydrides; West Germany is advancing high-temperature production of hydrogen; Brazil, with vast hydroelectric resources, already is using a 50-50 mixture of hydrogen and carbon monoxide as a substitute for natural gas; and Japan's auto industry is considering making hydrogen a fuel choice option in the foreseeable future. Japan also has its "Sunshine Project," which emphasizes solar-assisted hydrogen production.

We should not carry on an overly ambitious hydrogen program just because other industrialized nations of the world have such programs. However, the recent deemphasis in Federal hydrogen initiatives very much concerns me, and I seriously wonder if we again might be letting slip a technological development that could have crucial future economic implications.

Visions of the American auto industry seeking assistance to combat the superiority of foreign hydrogen-powered vehicles come to mind, and worse still, the possibility of the aerospace industry knocking on our doors, lamenting foreign dominance of the air because of our inability to anticipate an almost obvious long-term development. The defense overtones could compound the disastrous national economic consequences.

Let me assure my colleagues that my bill will not be creating another trough from which subsidies can be drawn. The provisions of this measure will commit our Nation to a reevaluation of where we are, so that recommendations can be made on what can be done to get us where we should be in the future. As a starting point, the Hydrogen Energy Coordinating Committee, an informal group representing 10 Department of Energy offices, can be activated to get the program off to a running start. There is every reason to believe that with some redirection and front-end Government incentives, our free enterprise system will be able to assume primary responsibility over the commercialization of the technology.

The intense worldwide interest in this alternative energy can perhaps best be appreciated by the various popular names by which hydrogen is known: "fuel of the future," "energy for space," "ultimate fuel," "universal fuel," and "cleanest, most natural fuel."

Hydrogen is the most abundant element in the universe and is readily available on Earth. Three-quarters of the world's surface is covered with water, the feedstock for hydrogen. Thus, wherever there might be electricity, high temperature, or sunlight, hydrogen can be produced.

Hydrogen is the lightest element in the universe, and therefore offers unique advantages in certain applications. For example, since hydrogen has a much higher energy per unit weight than conventional jet fuel, it could be used as a replacement fuel for aircraft.

Hydrogen has universal applicability, being a substitute for electricity or conventional fuels: Combined in a fuel cell with the atmosphere, electricity is produced; burned in a stove or engine, heat or mechanical motion can be extracted; stored in hydride form, a vehicle can be powered; and cooled into the liquid state, it is the ideal jet fuel.

Hydrogen has a number of advantages over electricity. It can be conveniently stored, allowing hydrogen generation plants to produce at maximum capacity at all times, or in the case of intermittent renewable energy sources, such as sunlight or windpower, it could permit sporadic production and storage for constant overall use. Hydrogen transmission over long distances through pipelines, furthermore, is more efficient and less costly than electrical transmission lines. While 10 percent or more of electrical energy

can be dissipated as heat in the line, hydrogen gas leakage will only be a fraction of this loss. Also, projected costs for hydrogen transmission amount to 4 cents to 6 cents per million Btu per 100 miles as compared to 37 cents to $1.05 for overhead electric transmission lines and $1 to $2 for underground transmission lines.

Although the Hindenburg dirigible syndrome has unfortunately created some safety doubts about this gas, experimental evidence indicates that there may be less exposure to hazard if liquid or hydrided hydrogen is used instead of jet fuel, gasoline, propane, kerosene, or liquid methane. A tank filled with gasoline or jet fuel shot with a high-powered rifle will explode, while a similar direct hit on a tank of liquid hydrogen will only cause leakage.

Madame President, hydrogen is indeed very much the ultimate, natural, and cleanest fuel. While fossil fuels emit particulates, carbon dioxide, carbon monoxide, oxides of sulfur, oxides of nitrogen, scrubber sludge, and ash, and nuclear energy yields various radioactive products, hydrogen combines with oxgen from the atmosphere to produce heat and/or electricity, with water as the byproduct. Hydrogen from solar energy sidesteps the dangers of nuclear proliferation and the "greenhouse effect."

This not to say, however, that hydrogen is the cure-all for our energy problem. There are questions about economics and timing. However, the technical knowhow is a sine qua non. Hydrogen cannot be regarded as a logical option unless the technical particulars of its generation, transmission, and storage are explored to their full potential.

A joint Department of Energy and National Academy of Sciences 1979 report entitled, "Hydrogen as a Fuel," indicated that there is a need for a well-conceived R&D program to study the basic problems that constrain the entrance of hydrogen into the economy. Specifically, the following principles should guide the formulation of a U.S. program in support of hydrogen systems:

First, basic exploratory research should be pursued on innovative concepts for hydrogen production, transmission, storage, and utilization through the laboratory demonstration stages. Such research should be pursued even if near-term market needs cannot be identified.

Second, the Federal program should include R&D elements designed to create a national data base of sufficient depth and quality that sound evaluations can be made of program alternatives in the future selections of coherent and timely development and demonstration programs.

Third, the Federal program should defer large-scale system development and demonstration activities aimed at hydrogen production until a market need of significant magnitude is clearly identified, and it is established that the timing or risks make it unlikely that the private sector will undertake these R&D phases.

Fourth, the architects of hydrogen R&D programs should remain alert to developments in application areas that might enhance the need for hydrogen, and thus accelerate consideration of development and demonstration programs for production, transmission, and storage systems.

Fifth, program priority should be given to exploratory research on concepts that hold promise of significantly reducing hydrogen production costs, particularly for coal/hydrogen systems, where the cost reductions could also benefit synthetic fuel costs.

Sixth, research should be initiated on hydrogen/air fuel cells suitable for transportation applications to provide an alternative to battery-powered automobiles in the event that future hydrocarbon fuel limitations are encountered.

Seventh, in addition to work on hydrogen production concepts, appropriate R&D should be conducted on potential problems associated with the transmission and storage of hydrogen as a consumer fuel. Particular attention should be given to the identification and resolution of potential safety problems for all phases of the hydrogen chain from production to consumption. Such studies should be conducted in a timely fashion so as to contribute to the overall evaluation of the feasibility of proposed hydrogen systems.

I wish to emphasize that my bill proposes the use of renewable energy in the production of hydrogen. This emphasis is made for three primary reasons:

First, the long-term survival of mankind cannot be tied to depletable energy. The energy content of domestic hydrogen annually produced today is approximately one quad. However, the corresponding energy consumption required, largely in the form of natural gas and petroleum, is about 1½ quads. In other words, if the current modes of hydrogen production are maintained, we would be using up fossil fuels at an even greater rate. Fortunately, a number of renewable energy options can be developed to replace fossil fuels totally.

Second, both the West German $50 trillion proposal and Japan's "Project Sunshine" specifically identify solar energy as the primary energy source in the process.

Third, a January 1981 publication, in summarizing the Department of Energy hydrogen projects, states that the ultimate requirement is a method of hydrogen production which makes use of renewables or long-term primary energy sources.

Madam President, in closing, I would like to refer to the 1979 report issued by the U.S. General Accounting Office entitled, "The Potential for Hydrogen as an Energy Source." It summarized the case for hydrogen development by stating that, while the decision to use hydrogen as a fuel will depend on economic, technical, sociopolitical, and institutional factors, the gas itself is an ideal fuel to meet our Nation's energy needs, because it is virtually inexhaustible, clean burning, convenient, versatile, and free from foreign control. Madam President, I submit that Congress can serve as the catalyst to help the private sector overcome these potential barriers, and I urge expeditious action on my bill to accelerate the commercialization of hydrogen.

Madam President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 652

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Hydrogen Research and Development Act".

TITLE I—HYDROGEN PRODUCTION AND UTILIZATION

FINDINGS AND PURPOSES

SEC. 101. (a) The Congress finds that—

(1) viable alternatives for petroleum-base fuels and feedstocks must be developed;

(2) priority should be given to the development of alternative fuels with universal availability;

(3) hydrogen is the most abundant element in the Universe, and the primary feedstock to produce hydrogen, water, covers three-fourths of the earth.

(4) hydrogen appears promising as an alternative to carbon dioxide producing fossil fuels;

(5) hydrogen can be transported more efficiently and at less cost than electricity over long distances;

(6) renewable energy resources are primary energy sources that can be used to convert hydrogen from its naturally occurring states into high quality fuel, feedstock, and energy storage media;

(7) it is in the national interest to accelerate efforts to develop a domestic capability to economically produce hydrogen in sufficient quantities to make a significant contribution toward reducing the Nation's dependence on conventional fuels;

(8) hydrogenation is an integral part of synfuels production; and

(9) hydrogen is an important feedstock for ammonia and fertilizer production.

(b) Therefore, the purpose of this title is to—

(1) direct the Secretary of the Department of Energy to prepare and implement a comprehensive plan and program to accelerate the conduct of research and development activities leading to the realization of a domestic capability to economically produce and distribute hydrogen within the shortest practicable time consistent with ap-

propriate research and development techniques; and

(2) establish renewable energy resources as a primary energy source to be used in the production of hydrogen.

COMPREHENSIVE MANAGEMENT PLAN

SEC. 102. (a) The Secretary is authorized and directed to prepare a comprehensive program management plan for the conduct under this title of research and development activities consistent with the provisions of sections 103 and 104. In the preparation of such plan, the Secretary shall consult with the Administrator of the National Aeronautics and Space Administration, the Secretary of the Department of Transportation, and the heads of such other Federal agencies and such public and private organizations as he deems appropriate. Such plan shall be so structured as to permit realization of a domestic hydrogen production capability within the shortest practicable time consistent with the appropriate research and development techniques. In addition, such plan shall identify a lead center responsible for technology support and project management.

(b) The Secretary shall transmit the comprehensive program management plan to the Committee on Science and Technology of the House of Representatives and the Committee on Energy and Natural Resources of the Senate within nine months after the date of the enactment of this Act.

(c) Concurrently with the submission of the President's annual budget to the Congress for each year after the year in which the comprehensive plan is initially transmitted under subsection (b), the Secretary shall transmit to the Congress a detailed description of the comprehensive plan as then in effect, setting forth the modifications which may be necessary to appropriately revise such plan and any changes in circumstances which may have occurred since the plan or the last previous modification thereof was transmitted in accordance with this section. The detailed description of the comprehensive plan under this subsection shall include (but need not be limited to) a statement setting forth (with respect to each of the programs under this title) any changes in—

(1) the anticipated research and development objectives to be achieved by the program;

(2) the program elements, management structure, and activities;

(3) the program strategies including detailed milestone goals to be achieved during the next fiscal year for all major activities and projects;

(4) the economic, environmental, and societal significance which the program may have;

(5) the total estimated cost of individual program items; and

(6) the estimated relative contributions of the Federal Government and non-Federal participants in the program.

Such description shall also include a detailed justification of any such changes, a detailed description of the progress made toward achieving the goals of this title, a statement on the status of interagency cooperation in meeting such goals, any comments on and recommendations for improvements in the comprehensive program management plan made by the Hydrogen Technical Advisory Panel established under section 107, and any legislative or other recommendations which the Secretary may have to help attain such goals.

RESEARCH AND DEVELOPMENT

SEC. 103. (a) The Secretary shall establish, within the Department of Energy, a program to insure the development of a domestic hydrogen fuel production capability within the shortest practicable time consistent with the appropriate research and development techniques.

(b) The Secretary shall initiate research or accelerate existing research in areas which may contribute to the development of a hydrogen production and utilization capability. Areas to be addressed shall include, but not be limited to (1) production; (2) liquefaction; (3) transmission; (4) distribution; (5) storage; and (6) utilization. Particular attention shall be given to developing an understanding and resolution of all potential phases of the hydrogen production and utilization chain into the marketplace.

(c) The Secretary shall give priority to those production techniques that use renewable energy resources as their primary energy source.

(d) The Secretary shall, for the purpose of performing his responsibilities pursuant to this Act, solicit proposals and evaluate any reasonable new or improved technology, a description of which is submitted to the Secretary in writing, which could lead or contribute to the development of hydrogen production technology.

(e) The Secretary shall conduct evaluations, arrange for tests and demonstration and disseminate to developers information, data, and materials necessary to support efforts undertaken pursuant to this section.

DEMONSTRATIONS

SEC. 104. (a) The Secretary shall conduct demonstrations, preferably in self-contained locations, so that technical and nontechnical parameters can be evaluated to best determine commercial applicability of the technology.

(b) Concurrent with the conduction of activities pursuant to section 103, smaller scale demonstrations, at self-contained sites, should be initiated, and the Secretary shall, in consultation with the Secretary of the Department of Transportation, the Administrator of the National Aeronautics and Space Administration, and the Hydrogen Technical Advisory Panel established under section 107, prepare a comprehensive large-scale hydrogen demonstration plan. Such plan shall include at a minimum—

(1) a description of the necessary research and development activities that must be completed before initiation of a large-scale hydrogen production demonstration program;

(2) an assessment of the appropriateness of a large-scale demonstration immediately upon completion of the necessary research and development activities; and

(3) an implementation schedule with associated budget and program management resource requirements.

TECHNICAL APPLICATIONS

SEC. 105. (a) The Secretary shall prepare a comprehensive technology application plan. Such plan shall include at a minimum—

(1) an identification and description of potential applications for the use of hydrogen;

(2) technical market and economic readiness assessments for such potential applications;

(3) an assessment of those Federal Government actions required to develop such applications; and

(4) an analysis of the potential impact such applications will have on domestic energy supplies; both regionally and nationally.

(b) The Secretary shall conduct all economic analyses on a total system, life cycle basis. Such analyses shall include at a minimum production, transmission, distribution, storage, and end-use application.

(c) The Secretary shall conduct all activities pursuant to section 103 and 104 in such manner as to permit compliance with end-use system integration constraints.

COORDINATION AND CONSULTATION

SEC. 106. (a) The Secretary shall have overall management responsibility for carrying out the program under this title. In carrying our such program, the Secretary consistent with such overall management responsibility—

(1) shall utilize the expertise of the National Aeronautics and Space Administration and the Department of Transportation; and

(2) may utilize any other Federal agency (except as provided in paragraph (1)) in accordance with subsection (c) in carrying out any activities under this title, to the extent that the Secretary determines that any such agency has capabilities which would allow such agency to contribute to the purposes of this title.

(b) The Secretary may, in accordance with subsection (a), obtain the assistance of any department, agency, or instrumentality of the executive branch of the Federal Government upon written request, on a reimbursable basis or otherwise and with the consent of such department, agency, or instrumentality. Each such request shall identify the assistance the Secretary deems necessary to carry out any duty under this title.

(c) The Secretary shall consult with the Administrator of the Environmental Protection Agency, the Secretary of the Department of Transportation, the Administrator of the National Aeronautics and Space Administration, and the Hydrogen Technical Advisory Panel in carrying out his authorities pursuant to this title.

TECHNICAL PANEL

SEC. 107. (a) A technical panel of the Energy Research Advisory Board shall be established to advise the Secretary on the conduct of the hydrogen program.

(b)(1) The technical panel shall be comprised of such representatives from domestic industry, universities, Government laboratories, financial, environmental, and other organizations as the Chairman of the Energy Research Advisory Board deems appropriate based on his assessment of the technical and other qualifications of such representative. Appointments to the technical panel shall be made within ninety days after enactment of this Act. Consideration should be given to the selection of at least one representative from sites where early large-scale demonstrations of the concept will occur.

(2) Members of the technical panel need not be members of the full Energy Research Advisory Board.

(c) The activities of the technical panel shall be in compliance with any laws and regulations guiding the activities of technical and factfinding groups reporting to the Energy Research Advisory Board.

(d) The technical panel shall review and may make recommendations on the following items, among others—

(1) implementation and conduct of the programs established by this Act;

(2) definition of hydrogen production performance requirements for various user applications; and

(3) economic, technological, and environmental consequences of the deployment of hydrogen production and utilization systems.

(e) The technical panel shall submit to the Energy Research Advisory Board on at least an annual basis a written report of its findings and recommendations with regard to the program. Such report shall include at a minimum—

(1) a summary of the panel's activities for the preceding year;

(2) an assessment and evaluation of the status of the programs mandated by this Act; and

(3) comments on and recommendations for improvements in the comprehensive program management plan required under section 102.

(f) After consideration of the technical panel report, the Energy Research Advisory Board shall submit such report, together with any comments such Board deems appropriate, to the Secretary.

(g) The heads of the departments, agencies, and instrumentalities of the executive branch of the Federal Government shall cooperate with the technical panel in carrying out the requirements of this section and shall furnish to the technical panel such information as the technical panel deems necessary to carry out this section.

(h) The Secretary shall provide sufficient staff, funds, and other support as necessary to enable the technical panel to carry out the functions described in this section.

DEFINITIONS

SEC. 108. As used in this title, the terms—

(1) "Secretary" means the Secretary of the Department of Energy; and

(2) "capability" means having the proven technical ability.

AUTHORIZATION FOR APPROPRIATION

SEC. 109. There is hereby authorized to be appropriated to carry out the purposes of this title, in addition to any amounts made available for such purposes pursuant to other Acts, the sum of $200,000,000 of which $25,000,000 is authorized for the fiscal year ending September 30, 1984.

TITLE II—HYDROGEN-FUELED AIRCRAFT RESEARCH AND DEVELOPMENT

FINDINGS AND PURPOSES

SEC. 201. (a) The Congress finds that—

(1) the petroleum-base fuel currently used in all commercial turbine-powered aircraft is in short and unstable supply;

(2) future decreases in petroleum-base fuel availability will seriously impair operation of the world's air transport fleets;

(3) an alternative to petroleum must be found to fuel commercial aircraft, and hydrogen appears to be the alternative preferred by the majority of the industrialized nations of the world;

(4) it is therefore in the national interest to accelerate efforts to develop a domestic hydrogen-fueled aircraft capability; and

(5) the use of liquid hydrogen as a commercial air transport fuel has sufficient long-term promise to justify a substantial research, development, and demonstration program.

(b) Therefore the purpose of this title is to—

(1) direct the Administrator of the National Aeronautics and Space Administration to prepare and implement a comprehensive plan and program for the conduct of research, development, and demonstration activities leading to the realization of a domestic hydrogen-fueled aircraft capability within seven years of the date of enactment of this Act, or within the shortest practicable time consistent with appropriate research and development techniques;

(2) establish as a goal broad multinational participation in the program; and

(3) provide a basis for public, industry, and certifying agency acceptance of hydrogen-fueled aircraft as a mode of commercial air transport.

COMPREHENSIVE MANAGEMENT PLAN

SEC. 202. (a) The Administrator is authorized and directed to prepare a comprehensive program management plan for the conduct under this title of research, development, and demonstration activities consistent with the provisions of sections 203, 204, and 205. In the preparation of such plan, the Administrator shall consult with the Secretary of the Department of Energy, the Secretary of the Department of Transportation, and the heads of such other Federal agencies and such public private organizations as he deems appropriate. Such plan shall be so structured as to permit realization of a domestic hydrogen-fueled aircraft capability within seven years of the date of enactment of this Act, or within the shortest practicable time consistent with appropriate research and development techniques. In addition, such plan shall identify a lead center responsible for technology support and project management.

(b) The Administrator shall transmit the comprehensive program management plan to the Committee on Science and Technology of the House of Representatives and the Committees on Commerce, Science, and Transportation, and Energy and Natural Resources of the Senate within nine months after the date of the enactment of this Act.

(c) Concurrently with the submission of the President's annual budget to the Congress for each year after the year in which the comprehensive plan is initially transmitted under subsection (b), the Administrator shall transmit to the Congress a detailed description of the comprehensive plan as then in effect, setting forth the modifications which may be necessary to appropriately revise such plan and any changes in circumstances which may have occurred since the plan or the comprehensive program management plan made by the Hydrogen-Fueled Aircraft Advisory Committee established under section 207, and any legislative or other recommendations which the Administrator may have to help attain such goals.

RESEARCH AND DEVELOPMENT

SEC. 203. (a) The Administrator shall establish, within the National Aeronautics and Space Administration, a program to insure the development of a domestic hydrogen-fueled aircraft capability within seven years after the date of enactment of this Act, or within the shortest practical time consistent with appropriate research and development techniques.

(b) The Administrator shall initiate research or accelerate existing research in areas which may contribute to the development of a hydrogen-fueled aircraft capability.

(c) In conducting the programs pursuant to this section, the Administrator shall encourage the establishment of domestic industrial capabilities to supply hydrogen-fueled aircraft systems or subsystems to the commercial marketplace.

(d) The Administrator shall, for the purpose of performing his responsibilities pursuant to this Act, solicit proposals and evaluate any reasonable new or improved technology, a description of which is submitted to the Administrator in comprehensive program management plan made by the Hydrogen-Fueled Aircraft Advisory Committee established under section 207, and any legislative or other recommendations which the Administrator may have to help attain such goals.

RESEARCH AND DEVELOPMENT

SEC. 203. (a) The Administrator shall establish, within the National Aeronautics and Space Administration, a program to insure the development of a domestic hydrogen-fueled aircraft capability within seven years after the date of enactment of this Act, or within the shortest practical time consistent with appropriate research and development techniques.

(b) The Administrator shall initiate research or accelerate existing research in areas which may contribute to the development of a hydrogen-fueled aircraft capability.

(c) In conducting the programs pursuant to this section, the Administrator shall encourage the establishment of domestic industrial capabilities to supply hydrogen-fueled aircraft systems or subsystems to the commercial marketplace.

(d) The Administrator shall, for the purpose of performing his responsibilities pursuant to this Act, solicit proposals and evaluate any reasonable new or improved technology, a description of which is submitted to the Administrator in writing, which could lead or contribute to the development of hydrogen-fueled aircraft technology.

(e) The Administrator shall conduct evaluations, arrange for tests and demonstrations and disseminate to developers information, data, and materials necessary to support efforts undertaken pursuant to this section.

FLIGHT DEMONSTRATION

SEC. 204. (a) Concurrent with the conduct of activities pursuant to section 203, the Administrator shall, in consultation with the Secretary of the Department of Transportation, the Secretary of the Department of Energy, and the Hydrogen-Fueled Aircraft Advisory Committee established under section 207, prepare a comprehensive flight demonstration plan, the implementation of which shall provide confirmation of the technical feasibility, economic viability, and safety of liquid hydrogen as a fuel for commercial transport aircraft—

(1) a description of the necessary research and development activities that must be completed before initiation of a flight demonstration program;

(2) the selection of a self-contained domestic site where demonstration activities can lead to early commercialization of the concept;

(3) an assessment of a preliminary flight demonstration to occur concurrently with the later stages of research and development activities; and

(4) an implementation schedule with associated budget and program management resource requirements.

(b) The Administrator shall transmit such comprehensive flight demonstration plan to the Congress within two years after the date of enactment of this Act.

HYDROGEN PRODUCTION AND GROUND FACILITIES

SEC. 205. (a) The Administrator, in consultation with the Secretary of the Department of Transportation and the Secretary of the Department of Energy, shall define the systems, subsystems, or components associated with the production, transportation, storage, and handling of liquid hydrogen that are specifically required for and unique to the use of such fuel for commercial aircraft application.

(b) The Administrator shall structure the research and development program pursuant to section 203 of this title to include at a minimum the development of the systems, subsystems, or components defined pursuant to subsection (a) of this section.

(c) Conduct of the research and development program for hydrogen production, transportation and storage systems, subsystems, or components, which are suitable for inclusion as part of a fully integrated hydrogen-fueled aircraft system, but which are not being specifically developed for such a application shall be the responsibility of the Secretary of the Department of Energy. Such activities shall be included as part of the program established pursuant to title I of this Act, and shall be so conducted as to insure compliance with hydrogen-fueled aircraft system constraints.

COORDINATION AND CONSULTATION

SEC. 206. (a) The Administrator shall have overall management responsibility for carrying out the program under this title. In carrying out such a program, the Administrator, consistent with such overall management responsibility—

(1) shall utilize the expertise of the Departments of Transportation and Energy to the extent deemed appropriate by the Administrator, and

(2) may utilize any other Federal agency (except as provided in paragraph (1)) in accordance with subsection (b) in carrying out any activities under this title, to the extent that the Administrator determines that any such agency has capabilities which would allow such agency to contribute to the purposes of this title.

(b) The Administrator may, in accordance with subsection (a), obtain the assistance of any department, agency, or instrumentality of the executive branch of the Federal Government upon written request, on a reimbursable basis or otherwise and with the consent of such department, agency, or instrumentality. Each such request shall identify the assistance the Administrator deems necessary to carry out any duty under this title.

(c) The Administrator shall consult with the Administrator of the Environmental Protection Agency, the Secretary of the Department of Transportation, the Secretary of the Department of Energy, and the Hydrogen-Fueled Aircraft Advisory Committee in carrying out his authorities pursuant to this title.

ADVISORY COMMITTEE

SEC. 207. (a) There is hereby established a Hydrogen-Fueled Aircraft Advisory Committee, which shall, at a minimum, study and advise the Administrator with regard to—

(1) implementation and conduct of the programs established by this title, with an aim toward accelerating commercialization;

(2) definition of hydrogen-fueled aircraft system performance requirements; and

(3) economical, technological, and environmental consequences of the deployment of hydrogen-fueled aircraft systems.

(b) The Committee shall be composed of at least seven members appointed by the Administrator from industrial, academic, financial, environmental, and legal organizations and such other entities as he deems appropriate. Consideration should be given to appointing at least one representative from sites where early commercialization of the concept might occur. The appointments shall be made within ninety days after enactment of this Act. The Chairman of the Committee shall be elected from among the members thereof.

(c) The heads of the departments, agencies, and instrumentalities of the executive branch of the Federal Government shall cooperate with the committee in carrying out the requirements of this section and shall furnish to the Committee such information as the Committee deems necessary to carry out this section.

(d) The Committee shall meet at least four times annually, notwithstanding subsections (e) and (f) of section 10 of Public Law 92-463, until such time as the program goals in section 203 are met.

(e) The Committee shall prepare and submit annually to the Administrator a report. Such report shall include at a minimum—

(1) a summary of the Committee's activities for the preceding year;

(2) an assessment and evaluation of the status of the programs mandated by this title; and

(3) comments on the recommendations for improvements in the comprehensive program management plan required under section 202.

(f) The Administrator shall provide sufficient staff and other support as necessary to enable the Committee to carry out the functions described in this section.

DEFINITION

SEC. 208. As used in this title, the term—

(1) "Administrator" means the Administrator of the National Aeronautics and Space Administration; and

(2) "certifying agency" means any government entity with direct responsibility for assuring public safety in the operation of the air transport system.

AUTHORIZATION FOR APPROPRIATION

SEC. 209. There is hereby authorized to be appropriated to carry out the purposes of this title the sum of $75,000,000 of which $10,000,000 is authorized for the fiscal year ending September 30, 1982.

By Mr. JACKSON (for himself and Mr. TOWER):

S. 653. A bill to amend chapter 104, title 10, United States Code, to establish the Foundation for the Advancement of Military Medicine, and for other purposes; to the Committee on Armed Services.

FOUNDATION FOR THE ADVANCEMENT OF MILITARY MEDICINE

● Mr. JACKSON. Mr. President, today I am introducing legislation for myself and Mr. TOWER to establish the Foundation for the Advancement of Military Medicine. The Foundation will be an educational and research foundation—a nonprofit, charitable entity which will receive gifts, grants, and legacies. Business will be conducted by a Board of Directors and the Foundation will provide funds for academic chairs, teaching, research and demonstration projects under the auspices of the Uniformed Services University of the Health Sciences.

The Foundation will cooperate in research with the Uniformed Services University by bringing resources to the University and helping the University and military medicine maintain advanced scientific teaching, research and medical services.

The bill also directly involves the Congress, through our participation as directors of the Foundation and in the purposes, direction and supervision of the Foundation. This is like our involvement at the Smithsonian Institution. Through the Foundation we will be involved in medical advances for the uniformed services. The Foundation lets us, with the support of the public, but without governmental expenditures, honor distinguished citizens, both military and civilian, with living memorials such as chairs in medical science and support of important and innovative research and medical services.

The University was established by Congress in 1972 to provide the country with a dedicated corps of uniformed services physicians, trained in the traditions of caring and healing, but trained as well in those special aspects needed to support the health of our military. With their special obligation to the country for this training, these physicians will provide a significant part of the military's medical officers; and, I expect, they will be leaders in our country's medical care.

The University, like the rest of Government, is constrained by the availability of resources. It has always been the Congress intent that the programs at the University will be the best, most innovative, and at the forefront of teaching, research and care. The Foundation provides one method of supporting these goals through the public's recognition of their importance.

This week, we have seen the country's amazing reaction to the end of the 11-year television series, "M.A.S.H.", and to those who portrayed so well the men and women serving in Korea in medical units. This honored role, which we recognize in the public's enthusiasm for "M.A.S.H.", can manifest itself by support of such men and women through the Foundation.

The University will, as well, be able to work with similar foundations, such as the American Registry of Pathology, the service academy organization and those foundations that honor distinguished men and women who have served their country.

I can envision such cooperation in areas where the University is at the

forefront of major medical breakthroughs. Currently, it is involved in an exciting project to reverse or halt the effects of spinal cord injuries.

The Foundation will be extremely important to both civilian and military medicine. Often medical projects that have so much importance to the military provide great benefit to everyone. As I mentioned, the University's spinal cord research will, if successful, not only allow us to care for men and women injured in combat by preventing or alleviating any crippling effects, but also to care for our sons and daughters who are injured in crippling accidents in swimming pools and other athletic events, and who come to our hospital emergency rooms with the terrible results of automobile accidents. Here the path for cooperation is clear. There is a shared interest in research and an important role for the Foundation in facilitating and expanding cooperation in such programs We often forget the continuum between the civilian and military medical community. Many physicians share the experience of having served in the country's military. Often they wish to honor those they trained with and worked with. This Foundation gives them the opportunity to provide this appropriate recognition.

In addition, the Foundation will support the growing international role of the University in its cooperative research in other countries and in its programs with medical schools training military medical officers both here and abroad.

The bill is essentially a simple one. It establishes the Foundation for the for the Advancement of Military Medicine and it gives the Board of Regents of the Uniformed Services University the authority to interact with the Foundation. The bill is noncontroversial and enhances a unique and important national medical resource. The bill is based on Senator KENNEDY's successful model, the American Registry of Pathology, that Congress established in 1976 to support the Armed Forces Institute of Pathology.

It is my hope that the Congress will give this legislation quick and favorable consideration.●

By Mr. WALLOP (for himself, Mr. ARMSTRONG, Mr. SYMMS, Mr. BOREN, Mr. DURENBERGER, Mr. DANFORTH, Mr. ROTH, Mr. GLENN, Mr. HEINZ, Mr. PACKWOOD, and Mr. CHAFEE):

S. 654. A bill to amend the Internal Revenue Code of 1954 to treat deductions for research and experimental expenses attributable to activities conducted in the United States as allocable to income from sources within the United States; to the Committee on Finance.

DEDUCTIONS FOR RESEARCH AND EXPERIMENTAL EXPENSES

● Mr. WALLOP. Mr. President, the legislation I am introducing today would eliminate a little known regulation in the Internal Revenue Code that has created a disincentive to research and development investments in the United States. The section to which I refer is 1.861.8 which requires U.S. companies with foreign operations to apportion or allocate a percentage of their domestic R&D expenditures to their earned income abroad. Since foreign tax authorities do not recognize this bookkeeping fiction, the net result is that no tax deduction is permitted for this portion of a company's R&D investment. Such adverse tax consequences create a disincentive to expanded R&D expenditures in the United States and an incentive to move such investments abroad where they are fully deductible and enjoy numerous other tax benefits.

While perhaps based upon theoretically sound tax principles of matching expenses to income, section 861.8 has nevertheless the anomalous effect of pushing U.S. R&D and its principal benefits abroad—a consequence this country can ill afford. Stable economic recovery based upon noninflationary growth requires that we foster, and certainly not impede, U.S. R&D investment and the expansion of the American technological base. It is only in this way that we can retool our traditional industries, create new and more productive jobs in both our traditional and growing high-technology sectors, and regain our international competitiveness in markets throughout the world.

The Congress took an important first step to rectify the problems created by the R&D portions of section 861.8 in the context of the Economic Recovery Tax Act of 1981. A provision was included in the House-passed measure to eliminate the regulation's R&D allocation requirements. While we were unsuccessful in incorporating a similar provision in the Senate Finance Committee bill, an amendment proposed on the Senate floor to suspend the application of the regulations for 1 year was approved. The subsequent House-Senate conference agreed upon a 2-year suspension of the R&D portions of 1.861.8. In addition, ERTA required the Treasury Department to conduct a study of the impact of the regulations on R&D activity in the United States. This study was to be submitted to the Congress within 6 months and is now approximately 1 year overdue with no completion date in sight. In the meantime, the moratorium expires at the end of 1983.

It is to preclude the reimposition of the R&D allocation requirements and their concomitant adverse effects on future R&D investment decisions that I introduce this bill today. It would simply repeal on a permanent basis that portion of section 1.861.8 of the IRS Code requiring the apportionment of R&D expenditures made in the United States, making all such expenses fully deductible against U.S. income.

The need for this legislation was confirmed by a recent study conducted by Arthur Andersen & Co. for four major trade associations, based upon a survey of the principal R&D spenders in the United States. The national research and development study, released February 1, documents the manner in which section 1.861.8 has adversely impacted upon R&D investments in this country. It examines the numerous foreign governmental policies designed to attract R&D dollars which when combined with the disincentive effects of section 861 frequently lead U.S. management to shift R&D investments abroad rather than expand R&D activities in the United States. In my view, this document provides clear and convincing evidence why this legislation should be enacted.

This legislation has strong bipartisan support in both the Senate and House and it is my sincere hope that it will also have the endorsement of the administration. I wish to thank my colleagues who have cosponsored this legislation with me today and pledge to work with them towards its early enactment.

Mr. President, I ask unanimous consent that the text of this legislation appear in the RECORD immediately following my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 654

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 861 of the Internal Revenue Code of 1954 (relating to income from sources within the United States) is amended by adding at the end thereof the following new subsection:

"(g) ALLOCATION OF RESEARCH AND EXPERIMENTAL EXPENDITURES.—

"(1) IN GENERAL.—For purposes of subsection (b) and section 862(b), all amounts allowable as a deduction for qualified research and experimental expenditures shall be allocated to income from sources within the United States and deducted from such income in determining the amount of taxable income from sources within the United States.

"(2) QUALIFIED RESEARCH AND EXPERIMENTAL EXPENDITURES.—

"(A) IN GENERAL.—The term 'qualified research and experimental expenditures' means amounts—

"(i) which are research and experimental expenditures within the meaning of section 174, and

"(ii) which are attributable to activities conducted in the United States.

"(B) TREATMENT OF DEPRECIATION, ETC.—Rules similar to the rules of subsection (c) of section 174 shall apply.".

(b) The amendment made by subsection (a) shall apply to taxable years beginning after December 31, 1980.●

By Mr. PELL (for himself, Mr. BIDEN, Mr. DODD, Mr. HOLLINGS, Mr. HUMPHREY, Mr. INOUYE, Mr. JACKSON, Mr. RIEGLE, Mr. SARBANES, and Mr. TSONGAS):

S. 655. A bill to authorize appropriations to carry out the national sea grant program for fiscal years 1984, 1985, and 1986, and for other purposes; by unanimous consent, referred jointly to the Committee on Commerce, Science, and Transportation and the Committee on Labor and Human Resources.

AUTHORIZATION OF APPROPRIATIONS FOR THE NATIONAL SEA GRANT PROGRAM

Mr. PELL. Mr. President, I am today introducing legislation to extend the authorization of appropriations for the national sea grant college program for an additional 3 years, through 1986. Joining me in introducing this legislation are Senators BIDEN, DODD, HOLLINGS, HUMPHREY, INOUYE, JACKSON, REIGLE, SARBANES, and TSONGAS.

The sea grant college program, established in 1966 by legislation which I introduced, has proved a highly successful and innovative mechanism for the development of our Nation's marine science and technology capabilities.

Repeated studies have proven the national sea grant college program to be highly cost efficient, producing cost savings in marine resource industries that are many times the modest investment of Federal and local matching funds. In addition, the program has spawned significant new marine resource industries and businesses.

With this record of success, I am appalled that the administration, again this year, is proposing elimination of the program. In each of the past 2 years, the Congress has rejected the administration's proposal to terminate Federal Government funding of the program, and I hope and expect that the Congress will again insist that the sea grant college program is a wise investment of taxpayers' funds and should be continued.

Mr. President, continuation of the sea grant college program is especially important at a time when U.S. industry in general is fighting for its very life against foreign competitors who are invading our markets through the development and application of advanced technology.

The sea grant program is in many ways a model for a national industrial strategy to maintain American leadership in technology and to assure that Americans will have jobs producing quality products for both domestic and world markets.

The sea grant college program is a national partnership of government, universities, and industry dedicated to the development of efficient and productive use of this Nation's rich marine resources.

This sea grant partnership examines the problems and potentials in marine resource protection and development, and develops new technology to solve those problems. Essential elements in every sea grant college program are education and training of scientists and technicians and extension services to help businesses and industry in the field to put the latest technological advances to work.

Sea grant is a model also, in that it requires a multidisciplinary approach to marine industry problems. The sea grant program can and does bring to bear on any problem not just scientific knowledge, but the contributions of economists, lawyers, educators, engineers, and just about any other field of knowledge required.

This is very much the kind of partnership, multidisciplinary effort that the Japanese have employed so successfully as a national industrial development strategy.

The sea grant program also is very close to the kind of industrial strategy that has been recommended for the United States by leading economists to assure that our Nation will be among the leaders in selected high-priority industries in a highly competitive world.

Instead of seeking to eliminate the sea grant college program, I believe the administration should seek to duplicate its success by establishing similar programs for other selected industries.

We would be foolish, indeed, to cast American industry adrift in a sea of laissez-faire economics, when our competitors abroad are vigorously pursuing, industry by industry, the advantages gained by partnership among government, academia, and business.

Mr. President, the national sea grant college program, administered by the National Oceanic and Atmospheric Administration of the Department of Commerce, encompasses 19 formally designated sea grant colleges, and an additional 10 sea grant institutions operating in 29 of the coastal and Great Lakes States, Puerto Rico, and Guam.

Repeated studies have demonstrated that this network of sea grant programs produces real economic benefits for our Nation.

For example, a study conducted by the Center for Policy Alternatives at the Massachusetts Institute of Technology, of a limited sample of individual sea grant projects, showed that 19 of the sample projects had led to commercial developments that enjoy annual sales of from $44 to $62 million—a figure well in excess of the current annual funding of the entire sea grant college program.

The MIT study, it should be emphasized, did not include all of the work of the sea grant program, but focused on just 77 projects funded in 1975. The MIT followup study conducted last year showed that these projects had resulted in the development of 11 new commercial products, the establishment of 10 new business enterprises, and the introduction of new products by an additional 25 companies.

Beyond its quantifiable commercial impact, the program though its education programs produces a supply of trained scientists, engineers, and technicians at a time when our Nation needs highly skilled manpower.

In addition, sea grant programs have served as the laboratories and expert advisers to State and local governments in their efforts to make maximum productive use of their coastal areas and marine resources. The sea grant programs have pioneered new methods to increase personal safety at sea and sea grant programs have developed methods and technologies that reduce costs for both Government and industry.

Let me cite just a few specific examples of how the investment in sea grant programs are paying off for the people.

Off the coast of Rhode Island a fishing boat went down in waters icy enough to kill the crew. But the crew survived and later gave credit to a sea grant marine advisory specialist who had trained them in techniques to prevent hypothermia and cold-water drowning. The techniques and equipment that saved these lives had been developed through research funded by sea grant in Michigan and Minnesota.

Off California, albacore fishermen use advanced satellite data showing warm and cool water masses to locate their catch, saving expensive fuel. Similarly, North Carolina charter boat captains are using satellite data to plan successful trips. Both groups began using the data system because sea grant advisory agents brought the system to their attention and helped them learn how to use it.

In Wisconsin, sea grant funded research on more flexible and cost-efficient water pollution control methods contributed to revisions of State standards that could save local governments and papermills millions of dollars and at the same time improve the water quality of the Fox River and Green Bay.

The national sea grant college program works and works efficiently. It should not be disbanded.

The legislation I am introducing today would authorize appropriations of $40, $45, and $50 million in the next 3 years and would extend the $5 million a year authorizations for the sea grant international cooperative pro-

gram. I urge my colleagues to support continuation of the program.

Mr. HOLLINGS. Mr. President, as on previous occasions, I have the honor today to join with Senator PELL and others in sponsoring legislation to reauthorize the National Sea Grant College and Program Act for fiscal years 1984, 1985, and 1986.

The Reagan administration has been notable in its persistent attempt to eliminate this highly successful program. Every year since 1981 the administration has told us that we should stop funding sea grant. And every year since 1981 the Congress has shown steadfast support. In these austere times we have cut back the funding to $35 million a year, from a peak of $41 million in fiscal year 1981. The bill we introduce today calls for authorized levels of funding at $40 million for fiscal year 1984, $45 million for fiscal year 1985, and $50 million for fiscal year 1986. Such spending ceilings reflect our belief that the sea grant program has undergone some very lean years, being reduced both by cuts in appropriations and by inflation. The modest growth built into our reauthorization will enable this vigorous program to carry on—although not in so lively a way as it might in better times.

The administration uses wondrous logic in recommending the termination of sea grant: Because the program has been successful, it must be done away with. That is backward thinking. I can see eliminating programs that do not work. But it seems to me that we would want to do all we can to keep the good things going.

Sea grant delivers a lot of value for the Federal investment. It has built a network of colleges and universities with strong programs in marine education and research, some 19 of which have been formally designated as sea grant colleges. It has stimulated a sound State-Federal partnership in marine programs through the requirement that the States put up matching funds. And through its marine advisory services, it has brought universities, industry, and local government together in ways that have led to tangible gains for the marine economy.

In my own home State of South Carolina I can point to any number of instances where the investment of sea grant dollars has been repaid many times over. Two recent mariculture and fishing projects provide excellent examples of the Federal-State-industry cooperation encouraged by the sea grant approach.

Since 1979 the South Carolina Sea Grant Consortium, the State wildlife and marine resources department, and a private mariculture firm have been working on the first effort in the Southeast to demonstrate the feasibility of the commercial-scale mariculture of hard clams. Without the $73,000 in economic and biological research through sea grant, this project might never have been pursued at all. But with the extra boost, the private firm was able to obtain the credit needed for capital and operating costs, and it is estimated that the operation will yield $1 million in clam sales by 1985. Thanks to this project we now have not only a thriving clam-culturing business, but we also have a proven design for a clam nursery facility and a publicly documented approach to a successful mariculture operation that entrepreneurs all over the country can benefit from.

The other illustration shows the shoestring costs of sea grant's marine advisory services. A lot of our coastal fishermen have been going broke fishing for shrimp, since their boats are idle during the winter months. Now, with the help of the marine advisory services, we have a number of commercial fishermen who fish for finfish like snapper and grouper during the winter until the beginning of the shrimp season in the spring. These fishermen have been landing between $500,000 and $750,0000 worth of finfish every year. The sea grant investment was 5 years of time and effort by marine extension agents, at an estimated cost of $15,000. It was a simple matter of technology transfer—the extension agents knew how to modify the shrimp trawls to catch the finfish and they shared this knowledge with the people who could use it productively.

In sum, sea grant is just the sort of program we should be stressing in these times because it involves the conservation and effective use of our natural resources and the better education and training of our people in fields like engineering and science. Economic frugality requires us to spend some of our money on preserving our future resources.

By Mr. RIEGLE:

S. 656. A bill to provide that no interest shall be charged on loans to State unemployment funds in the case of States which enact certain State unemployment compensation provisions, and to revise the criteria applicable to the cap on FUTA tax credit reductions; to the Committee on Finance.

INTEREST CHARGES ON LOANS TO STATE UNEMPLOYMENT FUNDS

● Mr. RIEGLE. Mr. President, the current sustained economic recession has pushed several of our great industrial States closer and closer to the edge of economic disaster. My own State of Michigan has been in the grip of economic agony. We have been staggering under the burden of double-digit unemployment for 38 consecutive months. Just to meet the basic income commitments to our unemployed workers, we have been forced to borrow in excess of $2 billion from the Federal Government. High unemployment has forced us to borrow these sums even in the face of interest charges that cost Michigan more than $216,000 per day and mounting penalty taxes on Michigan employers.

Michigan is a proud State that is struggling to recover from the economic malaise that has afflicted it. The State has recently undertaken major surgery on its unemployment insurance laws. Those changes include benefit reductions and tax increases that will generate over $3.5 billion in additional revenues over the next 4 years, and a freeze in benefit levels for the next 4 years. Needless to say, these changes were painful ones, taken under the most desperate of circumstances.

In the face of these major sacrifices, the continued imposition of mounting interest charges and mounting penalty taxes by the Federal Government makes no sense. At precisely the time that Michigan acts to help itself, the Federal Government actually cripples its chances for recovery. Michigan's economic situation is an extraordinary one, one that has been aggravated by the economic policies underlying the national recession. It is an economic situation that many of our industrial States share.

Clearly, the resolution of these problems requires a joint effort on the part of the Federal and State governments. When a State acts responsibly by altering its unemployment insurance laws to restore solvency, the Federal Government should reciprocate. The legislation I am introducing today will do precisely this. It provides relief from interest and penalty taxes for those States which are reeling under the effects of a deep recession. I am pleased that Senators are cosponsoring this legislation.

My bill has two major components. It exempts a State from interest charges assessed on advances from the Federal Unemployment Account if the State enacts legislation that raises additional revenues to pay unemployment benefits. Furthermore, it changes the criteria a State must satisfy in order to qualify for the Federal unemployment tax (FUTA) credit reduction cap.

INTEREST

When a State cannot pay its unemployment benefits from its State unemployment tax revenues, it must borrow from the Federal Unemployment Account (FUA) to meet its payments. As a result of the Budget Reconciliation Act of 1981, interest of up to 10 percent per annum is assessed on advances taken since April 1, 1982. Congress imposed this interest charge as an incentive for States to repay their debt and to restore solvency to their unemployment trust funds.

Consistent with this congressional intent, this bill exempts States from the imposition of these interest charges if they have enacted legislation to restore solvency. Specifically, a State must enact a law that increases its unemployment tax revenues and, if its average weekly unemployment benefit amount exceeds that national average, the law must decrease benefit expenditures. For a State that enacts its law after March 31, 1982, but before April 1, 1984, the law must increase tax revenues by at least 20 percent. It must also decrease benefit expenditures by 5 percent if its average weekly benefit exceeds the national average. A State that enacts its law on or after April 1, 1984, must increase tax revenues by at least 40 percent and decrease benefit expenditures by at least 10 percent. The difference in percentage provides an incentive for a State to act quickly to restore solvency. Effective the date the State law takes effect, the State will be exempt from interest charges assessed on outstanding advances.

A State would not qualify for the exemption if it increased its net borrowing from FUA compared to the prior year, unless its average unemployment tax rate exceeded the national average rate by at least 30 percent. This requirement insures that a State will act in a fiscally responsible manner. It also recognizes, however, that a State should not lose its eligibility when rising unemployment causes further borrowing if that State demonstrates a State tax effort substantially greater than the national average. The bill also provides that any State that decreases its unemployment tax effort below the bill's minimum levels in subsequent years will lose its exemption.

Mr. President, this interest exemption constitutes a fair and necessary solution to the problem of escalating debt suffered by high-unemployment States. It is fair because it relieves only those States that act to restore their solvency and thereby accelerate their loan repayment to the Federal Government. Since Congress imposed the interest charge to force a State to act in a fiscally responsible manner, it should suspend that charge when a State complies.

The exemption is necessary because those States suffering the highest unemployment for the longest periods simply cannot repay loans quickly and avoid interest charges. My own State of Michigan, devastated by 38 straight months of double-digit unemployment, now owes FUA over $2.38 billion. It must pay $216,000 per day in interest charges alone. Other high-unemployment States such as Illinois, Ohio, and Pennsylvania face similar interest costs.

Much of the impetus for this interest exemption comes as a result of actions taken in my State of Michigan. Michigan enacted a law, which became effective January 1, that resulted from many months of serious negotiations among labor, business, and Government representatives. Both labor and business made important concessions in order to restore solvency to the State fund. Employers accepted increases in tax rates and the taxable wage base, as well as a new solvency tax. Labor agreed to a reduction in benefits through a freeze on the maximum weekly benefit amount, a reduction in the wage replacement ratio, and stricter eligibility requirements. These reforms will raise an additional $530 million in 1983, which represents an increase of over 80 percent in available revenues for 1983. The Michigan Employment Security Commission projects that the new law will raise more than $3.57 billion in additional revenues during the years 1983-86.

My colleagues should note that Michigan has enacted these tough reforms during the worst economic crisis it has faced since the Great Depression. Despite these reforms, Michigan must continue to borrow because of the hundreds of thousands of unemployed who depend on unemployment benefits. This is why we in the Congress must act to supplement the actions of States like Michigan and Louisiana, which also has enacted changes in its unemployment insurance laws. An interest exemption is an appropriate and needed congressional solution.

FUTA "CAP"

The second part of this bill changes the criteria a State must satisfy in order to qualify for the cap on FUTA tax credit losses. These changes are necessary because the economic assumptions underlying the cap criteria have proven wrong.

Under current law, the Federal Government imposes a 3.5 percent Federal unemployment tax (FUTA) on employers, but grants a 2.7 percent tax credit if the employer's State meets certain requirements. When a State fails to repay its advances from FUTA within 2 years, that tax credit decreases by 0.3 percent in each succeeding year the debt remains unpaid. The tax credit losses are equivalent to a net increase in FUTA taxes paid by employers. The Omnibus Budget Reconciliation Act of 1981 permitted a State to limit or cap the tax credit loss if it met four solvency criteria. Congress enacted the cap provisions as an incentive for States to enact administrative and legislative changes to achieve solvency.

The two criteria that went into effect this year require a State to establish that (1) its average tax rate for the calendar year equals or exceeds its average benefit cost rate for the prior 5 years; and (2) its outstanding loan balance to FUA on September 30 does not exceed its balance on the third preceding September 30. When these provisions were agreed upon in 1981, economic projections indicated that a State would not need to borrow, or would borrow relatively small amounts, when these criteria took effect this year. Economic conditions have proven far worse than anticipated in the past 18 months. The number of unemployed has increased so greatly that States have had to pay billions of dollars of benefits and, therefore, have increased their borrowing to meet these payments. Even the administration now projects that the State debt to FUA will escalate from $8.6 billion owed at the end of fiscal year 1982 to $23.4 billion at the end of fiscal year 1984. Clearly, the economic assumptions underlying the cap criteria were wrong.

In recognition of the fact that State borrowing has increased greatly, this bill amends those two criteria that took effect this year. The bill eliminates the requirement that the outstanding loan balance not exceed that of the third preceding year. The reason for this change is obvious. Because of the extraordinarily high unemployment experienced by many States, virtually no State will satisfy this criterion in the next 2 years.

The bill also changes the criterion that requires a State's average tax rate to equal or exceed that State's average benefit cost rate for the prior 5 years. The bill eliminates the 5-year average so that a State's tax rate must equal or exceed its benefit cost rate for that year. The current formula, which places too much emphasis on a State's benefit cost rate of prior years when economic conditions differed radically from today, makes this change necessary. The rates of 4 and 5 years ago reflected an economic climate of much lower unemployment and surplus moneys in many State trust funds. The current criterion requires a State to raise its tax rates unreasonably high during the current period of economic crisis. Even if a State has increased its tax rate in a reasonable manner to account for the drain on its unemployment trust fund, it may still not satisfy the current criterion. Since providing an incentive for States to restore solvency was the intent underlying the enactment of the FUTA cap provisions, the change made by this bill furthers that intent in a more realistic manner.

Mr. President, 23 States owed money to the Federal Unemployment Account at the end of 1982. Another 13 States may become insolvent by the end of 1983 as a result of escalating unemployment payments. Now is the time for Congress to grant States the opportunity to offset the devastating effects of the economic crisis they have experienced. This legislation grants that opportunity to those States that enact responsible solutions

to their insolvency problem. I urge my colleagues to support the grant of that needed opportunity.

Mr. President, I ask unanimous consent that the full text of S. 656 be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 656

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 1202(b) of the Social Security Act is amended by redesignating paragraph (7) as paragraph (8) and inserting after paragraph (6) the following new paragraph:

"(7)(A) No interest which would otherwise accrue by reason of this subsection shall accrue with respect to any fiscal year (or portion thereof) which begins on or after the date, occurring after March 31, 1982, on which there became effective a State action which changed such State's unemployment compensation law so as to provide, effective for each fiscal year beginning after such date (and for the remainder of the fiscal year in which such date occurs), that—

"(i) the revenues from the State unemployment tax are increased for each such fiscal year (or portion thereof) by at least 20 percent (or, in the case of a State action taken after March 31, 1984, by at least 40 percent) over the amount of such revenues which would have been generated for such fiscal year (or portion thereof) under such law as in effect prior to such State action; and

"(ii) in the case of a State which paid (prior to such State action) average weekly benefit amounts under such law which exceeded the national average for such amounts, the total amount of benefit expenditures under such law for each such fiscal year (or portion thereof) is reduced by at least 5 percent (or, in the case of a State action taken after March 31, 1984, by at least 10 percent) below the amount of such expenditures which would have been paid under such law as in effect prior to such State action, by reason of two or more of the following: (I) a freeze on the maximum benefit amount, (II) a reduction in the benefit cost ratio (as defined in section 3302(f)(5) of the Internal Revenue Code of 1954), or (III) restrictions on qualification for benefits.

The provisions of this subparagraph shall apply only with respect to a fiscal year (or portion thereof) for which the requirements of clauses (i) and (ii) are actually met.

"(B) Subparagraph (A) shall not apply with respect to interest accruing during any fiscal year (or portion thereof) if the amount of the advances made to such State during such fiscal year, less any voluntary repayments made by such State during such fiscal year (as defined in paragraph (6)(B)), exceeds zero; except that this subparagraph shall not apply (and subparagraph (A) will apply) in the case of a State which has, for such fiscal year or portion thereof, a State unemployment tax rate (as defined in section 3302(f)(4) of the Internal Revenue Code of 1954) which is equal to or greater than 130 percent of the average of such tax rates for all the States.".

(b) The amendments made by subsection (a) shall apply with respect to interest accruing under title XII of the Social Security Act on or after April 1, 1982.

SEC. 2. (a) Section 3302(f)(2) of the Internal Revenue Code of 1954 is amended—

(1) by inserting "and" at the end of subparagraph (B);

(2) in subparagraph (C), by striking out "the average benefit cost ratio for calendar years in the 5-calendar-year period ending with the last calendar year before the taxable year, and" and inserting in lieu thereof "the benefit cost ratio for the last calendar year ending before the taxable year."; and

(3) by striking out subparagraph (D).

(b) The amendments made by subsection (a) shall apply with respect to taxable year 1983 and each succeeding taxable year.●

By Mr. DOLE (for himself, Mr. MELCHER, Mr. RANDOLPH, Mr. HEINZ, Mr. PERCY, and Mr. STEVENS):

S. 657. A bill to amend the Animal Welfare Act to insure the proper treatment of laboratory animals; to the Committee on Agriculture, Nutrition, and Forestry.

IMPROVED STANDARDS FOR LABORATORY ANIMALS ACT

● Mr. DOLE. Mr. President, today I am introducing S. 657, the Improved Standards for Laboratory Animals Act, as an amendment to the Animal Welfare Act. The act was first passed in 1966 as the Laboratory Animal Welfare Act and subsequently amended in 1970 and 1976 and renamed the Animal Welfare Act. The purpose of S. 657 is to enhance the USDA's efforts to insure the proper care and treatment of laboratory animals.

Several bills were introduced in the House during the 97th Congress which, in part, addressed a uniform system of standards for lab animals. H.R. 6928 received considerable attention before the lameduck session adjourned. After hearings last May, the legislation passed from the Science and Technology Committee to the Energy and Commerce Committee and hearings were held in the Health and Environment Subcommittee. Also toward the end of the 97th Congress, I introduce S. 2948 in the Senate which was similar to H.R. 6928 with a few modifications.

IMPROVED STANDARDS

S. 657 is in keeping with the spirit of the Animal Welfare Act. It would set up a uniform set of standards based on those sections of the "Guide for the Care and Use of Laboratory Animals" of the National Institutes of Health (NIH) which deal directly with the welfare of animals.

The USDA already has a minimum set of standards for research facilities regardless of whether they receive Federal funding. The minimum standards affect handling, housing, feeding, watering, sanitation, ventilation, shelter from extremes of weather and temperatures, and adequate veterinary care including the appropriate use of anesthetic, analgesic, or tranquilizing drugs. The proposed amendment would raise the level of these existing standards for research facilities.

ANIMAL STUDIES COMMITTEE

S. 657 would also establish an Institutional Animal Studies Committee with guidelines to govern committee actions. NIH suggests that such a committee is an effective device for developing and monitoring policies to guide animal care in keeping with the needs of the institution. However, aside from basic guidelines dealing with committee personnel, research facilities are without guidelines specifying periodic visits or report-filing procedures.

The Animal Welfare Act authorizes USDA to make unannounced inspections depending on budget and other agency priorities. USDA is prohibited from interfering with the design of actual research or experimentation. S. 657 also does not affect the design of actual research projects. In effect, the committees could make USDA's inspections more effective without increasing Government costs.

PENALTIES

If the sponsoring Federal agency determines that a research facility has not met applicable standards despite notification, the agency would suspend or revoke Federal support for a project. The USDA has no provisions for revoking funds but does charge fines for violations. USDA may also impose cease-and-desist orders for violations.

INFORMATION SERVICE

S. 657 would also establish an information service at the National Agricultural Library. The National Agricultural Library would work with the National Library of Medicine in providing information on improved methods of animal research and methods which reduce or replace animal use, minimize pain and distress, and prevent unnecessary duplication of animal experiments. This could help research facilities save time and expense by being able to obtain information on new methods of research or results from similar experiments.

SPECIAL PROCEDURES

The amendment would also mandate special conditions that reviewing agencies would look for in research proposals involving the direct use of conscious animals. NIH's "Guide" suggests some of these procedures and the Animal Welfare Act requires registrants to submit annual reports disclosing the species and number of animals used and showing whether pain-relieving drugs were used in relevant experiments. S. 657 would insure that such procedures are followed.

Finally, I would reemphasize that the issues involved in S. 657 have been thoroughly discussed with scientific and animal welfare interests. Both sides do not seem to be far apart and this bill should resolve most of their differences.

Mr. President, I ask that the text of this amendment appear in the RECORD at this point in my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 657

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Improved Standards for Laboratory Animals Act".

FINDINGS

SEC. 2. The Congress finds that—

(1) methods of testing that do not use animals have been developed which show promise of being faster, less expensive, and more accurate than traditional animal experiments for some purposes and further opportunities exist for the development of these methods of testing;

(2) measures which eliminate or minimize the unnecessary duplication of experiments on animals can result in more productive use of Federal funds; and

(3) measures which help meet the public concern for laboratory animal care and treatment are important in assuring that research will continue to progress.

DEFINITIONS

Sec. 3. (a) Section 2 (e) of the Animal Welfare Act (7 U.S.C. 2132 (e)) is amended by adding after "The term 'research facility' means" the following: "each department, agency, or instrumentality of the United States which uses animals for research or experimentation,".

(b)(1) Subsections (f), (g), (h), (i), and (j) are redesignated as subsections (j), (k), (l), (m), and (n), respectively.

(2) Section 2 of the Animal Welfare Act is amended by adding after subsection (e) the following:

"(f) The term 'Federal agency' means an executive agency as such term is defined in section 105 of title 5, United States Code, and with respect to any research facility means the agency from which the research facility has received or may receive a Federal award for the conduct of research, experimentation, or testing, involving the use of animals;

"(g) The term 'Federal award for the conduct of research, experimentation, or testing, involving the use of animals' means any mechanism (grant, contract, cooperative agreement, or loan) under which Federal funds are provided to support the conduct of such research;

"(h) The term 'direct use of conscious animals' means any use or procedure that involves more than momentary minor pain or discomfort, except where the animal is anesthetized throughout the entire course of that use or procedure;

"(i) The term 'quorum' means a majority of the committee members;".

STANDARDS AND CERTIFICATION PROCESS

SEC. 4. (a) Subsection (a) of section 13 of the Animal Welfare Act is amended by adding after "(a)" the following: "(1)".

(b) The second sentence of section 13(a) of the Animal Welfare Act (7 U.S.C. 2143 (a)) is amended to read as follows: "Such standards shall include—

"(A) proper requirements with respect to handling, housing, feeding, watering, sanitation, ventilation and shelter from extremes of weather and temperatures;

"(B) provision for adequate exercise and separation by species where the Secretary finds that such separation is necessary for humane handling; and

"(C) provision for adequate veterinary care, including the appropriate use of anesthetic, analgesic, or tranquilizing drugs and appropriate pre-surgical and post-surgical medical and nursing care.".

(c) The last sentence of section 13(a) of the Animal Welfare Act (17 U.S.C. 2143 (a)) is amended to read as follows: "Nothing in this Act shall be construed as authorizing the Secretary to promulgate rules, regulations, or orders with regard to design of research or experimentation by a research facility. The Secretary shall promulgate standards for research facilities, including proper requirements for animal care, treatment and methodology in experimental procedures to ensure that animal pain and distress are minimized. The Secretary shall require, at least annually, every research facility to show that the standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs during experimentation, are being followed by the research facility during research and experimentation.".

(d) Subsection (a) of section 13 of the Animal Welfare Act is amended by adding at the end thereof the following:

"(2)(A) The Secretary shall require that each research facility establish an institutional animal studies committee (hereinafter in this paragraph referred to as the 'committee') composed of not fewer than three members. Such members shall possess sufficient expertise to assess the appropriateness of animal care and treatment in experimental research. Of the members of the committee—

"(i) at least one member shall be a doctor of veterinary medicine;

"(ii) at least one member shall not be affiliated with the research facility and shall be primarily responsible for representing community concerns regarding the welfare of animal subjects (such member shall provide adequate assurances that he or she will not release any trade secrets or confidential information of the research facility; and

"(iii) not more than three members, in those cases where the committee consists of more than three members, shall be form the same administrative unit of the research facility.

"(B) Such committee shall—

"(1) meet regularly with a quorum for all formal actions;

"(ii) make inspections at least semiannually of all animal study areas and facilities of the research facility;

"(iii) review as part of the inspection of the research facility the research methods and practices involving direct use of conscious animals and the condition of research animals for the purpose of evaluating those research methods and practices to ensure that animal pain and distress are minimized and to ensure compliance with the standards for appropriate animal care, treatment, and methodology; and

"(iv) file with the Secretary and with any Federal agency from which the research facility is receiving an award, a certification that such semiannual inspections and reviews have taken place.

The inspection certification required by subparagraph (B)(iv) shall include reports of any violations of standards promulgated by the Secretary, deficient conditions of animal care or treatment, and deviations of research methods and practices from originally approved proposals that adversely affect animal welfare. Such inspection certification shall be signed by a majority of the committee members. The committee shall file complete records of their inspection certification visits (including attendance of committee members) and other information pertinent to its activities. Any minority views shall be included in the certification records. Such records shall be maintained for at least three years by the committee or the research facility and available for inspection by any appropriate Federal agency.

"(C) The committee shall notify the Animal and Plant Health Inspection Service of the Department of Agriculture and any Federal agency from which the research facility is receiving an award, in writing, of any unacceptable conditions of animal care, treatment or methodology which have not been included in the certification. The notification shall be made only after the administrative representative of the research facility has been notified by the committee of the unacceptable conditions and the research facility is given an opportunity to make such conditions acceptable.

"(D) committee shall provide for annual sessions for scientists, animal technicians, and other personnel involved with animal care and treatment in research facilities, which provide instruction or training in—

"(i) the humane practice of animal maintenance and experimentation;

"(ii) the concept, availability, and use of research or testing methods that minimize or eliminate the use of animals or limit animal pain or distress; and

"(iii) utilization of the information service at the National Agricultural Library established under subsection (e) to prevent unnecessary duplication of animal experimentation by research facilities.

"(3) Research facilities shall inform their employees of the provisions of this section and shall inform such employees to report to the committee any violations of such provisions. Employees of such facilities may not be discriminated against because such employees reported any such violation.

"(4) The Secretary may waive the standards established under this section under exceptional circumstances which are related to the needs for research results or special and unusual circumstances of the research facility.".

(e) Section 13 of the Animal Welfare Act is amended by adding at the end thereof the following:

"(e) The Secretary shall facilitate agency compliance with the requirements of this section through the establishment of an information service at the National Agricultural Library. The National Agricultural Library shall, in cooperation with the National Library of Medicine, provide information on improved methods of animal experimentation including methods which would—

"(1) reduce or replace animal use;

"(2) minimize pain and distress, such as anesthetic and analgesic procedures; and

"(3) prevent unnecessary duplication of animal experimentation.

"(f)(1) A research facility shall provide a statement of assurance of compliance with this section upon requesting a Federal award for the conduct of research, experimentation, or testing involving the use of animals to the Secretary of Agriculture and to the Secretary of any Federal agency from which such research facility is requesting such award.

"(2) No Federal agency may approve any research facility for the receipt of a Federal award for the conduct of research, experimentation, or testing unless the agency finds, as a result of its review of the scientific merit of the proposal, that the award proposal includes—

"(A) in its justification of the research, the details of any procedure likely to produce pain or distress in an experimental animal and demonstrates that the principal investigator has considered possible alternative methods to any such procedure;

"(B) in any case involving the direct use of conscious animals, appropriate assurances that a doctor of veterinary medicine has been consulted in the planning of such procedures;

"(C) in any case involving the direct use of conscious animals, assurances—

"(i) for the proper use of tranquilizers, analgesics, and anesthetics;

"(ii) for appropriate pre-surgical and post-surgical medical and nursing care;

"(iii) against use of paralytics without adequate anesthesia; and

"(iv) that the withholding of tranquilizers, anesthesia, analgesia, or euthanasia when scientifically necessary shall continue for only the necessary period of time; and

"(D) except in cases of scientific necessity or other special circumstances as determined by the animal studies committee, assurances that no animal may be used in more than one major operative procedure from which it is allowed to recover.

"(g) The Secretary of Agriculture shall promulgate standards for compliance with this section. In any case in which the sponsoring Federal agency determines that conditions of animal care, treatment, or methodology in a particular project have not been in compliance with applicable standards, despite notification to the research facility, that agency shall suspend or revoke Federal support for the project. Any research facility losing Federal support as a result of actions taken under the preceding sentence shall have the right of appeal as provided in sections 701 through 706 of title 5, United States Code.".

EFFECTIVE DATE

SEC. 5. This Act shall take effect one year after the date of enactment.●

By Mrs. HAWKINS (for herself, Mr. CHAFEE, and Mr. SYMMS):

S. 658. A bill to amend the Agricultural Act of 1949 to modify the dairy price support program for the 1983 through 1985 fiscal years, and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

NATIONAL DAIRY EQUITY ACT OF 1983

● Mrs. HAWKINS. Mr. President, despite our best efforts in the 97th Congress, the dairy program is careening out of control. In the last 3 years, Congress has considered the dairy program on several occasions to ease the burden on American taxpayers. Unfortunately, the burden has nevertheless become heavier. Twice Congress voted to forego scheduled increases in support levels, but with little result. And last year Congress, voted to freeze support levels while imposing $1 assessments against dairy producers. Although this assessment would have resulted in budgetary savings, the plan has little support among producers, consumers, Members of Congress, and the administration. In fact, it was ruled unconstitutional. Therefore, the important budgetary savings projected by the assessment remain unrealized. And the dairy surpluses continue to pile higher in underground Federal warehouses.

Thus, despite our efforts, overproduction of dairy products continues uninterrupted while the Federal Government daily purchases record quantities of surplus dairy products. Currently the Federal Government is forced to buy and store 10 percent of annual dairy production.

Mr. President, we cannot fault dairy farmers for this problem. They are responding to the signals sent by Congress. And, we cannot fault the program because, in the past, it has worked well, at little Federal expense. In the late 1970's, however, Congress sent the misguided signal to producers to increase production well beyond the amount consumers demanded. In 1977 and again in 1979, Congress dramatically increased support levels. In fact, by October 1980, it was $13.10 per hundredweight, 60 percent higher than only 4 years earlier, despite the fact that production costs were rising substantially less.

The result of this increase in support levels was predictable: Dairy farmers increased production. Dairy production soared 10 percent in 3 years, and, with a reduction in per capita dairy consumption, the Federal Government was forced to purchase dairy products at unprecedented levels. Incredibly, the Federal Government now purchases over 20 percent of the Nation's cheese production, almost 30 percent of all butter, and 65 percent of all nonfat dry milk produced in this country. Currently the Commodity Credit Corporation has in storage 438 million pounds of butter, 825 million pounds of cheese, and 1.2 billion pounds of nonfat dry milk. And the stocks continue to increase faster than we can give it away.

And what about the cost to taxpayers? When the support level was at reasonable levels in 1979, the cost of the program was only $46 million. As support levels increased, however, program costs skyrocketed to $1 billion in fiscal year 1980 and doubled to $2 billion in fiscal year 1981 and fiscal year 1982. And, if nothing is done costs will be $2.5 billion in fiscal year 1983. Does this program—with its unreasonable high support levels—sound as though it promotes a balance between supply and demand? I think not.

Mr. President, the dairy industry understands the seriousness of the problem and realizes that unless action is taken to bring supply in line with demand, the dairy support program and Federal marketing order programs are in jeopardy. Some argue that base plans, in effect creating an OPEC for milk, or different support levels for different classes of milk should be established. We believe, however, that the surest and fairest method of reducing the overproduction is to lower support levels across the board. After all, dairy farmers throughout the United States will benefit if the traditional dairy program is properly administered. They understand it and support it. Why dismantle the entire program when it is only necessary to adjust one component of it?

That one component is the support level. History has proven that a reduction in the support level is rapidly reflected in reduced Government purchases. In the past under similar circumstances, Congress has lowered the support level three times, and on each occasion, Commodity Credit Corporation purchases were significantly reduced. It worked then, and it will work now.

Therefore, today, Mr. President, we are introducing legislation that will bring order to the dairy program by using a traditional remedy. Our legislation repeals last year's language that allows the Secretary of Agriculture to levy unprecedented assessments on dairy farmers. Instead, it establishes a support price of $12.10 per hundredweight on April 1, 1983. In addition, the Secretary of Agriculture may reduce the support price to $11.60 per hundredweight on October 1, 1983, if he determines after consulting with the dairy industry that CCC purchases are not likely to decline in fiscal year 1984 below the amount bought in fiscal year 1983.

Further, when CCC purchases fall below 7 billion pounds, the support level would increase 50 cents per hundredweight, and when CCC purchases fall below 5 billion pounds or less, there would be an additional 50-cent increase.

This legislation is very similar to that supported by the Farm Bureau in the last Congress and is gaining support among dairy farmers throughout the country. They recognize that this plan provides an incentive to reduce production in order to achieve a higher support price later. And in so doing they are also protecting the dairy program from those who seek to abolish the dairy price support and marketing order programs.

Also, it is important to note that any dairy reform proposal that does not reduce support prices will not lead to increased consumption. But greater consumption is essential to dairy farmers to offset lower profit that everyone knows are inevitable.

In addition, our legislation will result in significant consumer savings. Due to the competitive nature of the dairy industry, the sellers of dairy products will reflect their lower costs through the purchase price of dairy

products to the public. By reducing the support level to $12.10, grocery store prices could drop as much as 11 cents per gallon of milk, 12 cents per pound of cheese, and 15 cents per pound of butter. Many consumers once priced out of the market could then increase their dairy products purchases. All told, consumer costs for dairy products may be reduced by as much as $1.7 billion over the life of the bill, while demand for dairy products will increase by 1.5 billion pounds. And consumer savings are distributed in a progressive fashion. The poor spend 5 percent of their income on dairy products while the well-to-do spend 1 percent, according to the Labor Department. For this reason, our bill might more appropriately be called the Low-Income Dairy Assistance Act of 1983.

Mr. President, I argued in favor of reducing dairy price supports before but never has the need been greater. We must bring supply in line with demand by letting the market work. I urge my colleagues to support this legislation because it is fair to producers, consumers, and taxpayers alike.●

By Mr. THURMOND (for himself, Mr. ABDNOR, Mr. ANDREWS, Mr. BUMPERS, Mr. BURDICK, Mr. CHILES, Mr. D'AMATO, Mr. DECONCINI, Mr. DOMENICI, Mr. DURENBERGER, Mr. EAST, Mr. EXON, Mr. GOLDWATER, Mr. HATFIELD, Mr. HEINZ, Mr. HELMS, Mr. HOLLINGS, Mr. HUDDLESTON, Mr. INOUYE, Mr. JOHNSTON, Mr. LAXALT, Mr. LUGAR, Mr. MATTINGLY, Mr. MELCHER, Mr. NUNN, Mr. PERCY, Mr. PRYOR, Mr. RANDOLPH, Mr. STENNIS, Mr. TSONGAS, Mr. WARNER, and Mr. JEPSEN):

S.J. Res. 44. Joint resolution to authorize the President to issue a proclamation designating the week beginning on March 11, 1984, as "National Surveyors Week"; to the Committee on the Judiciary.

NATIONAL SURVEYORS WEEK

Mr. THURMOND. Mr. President, on behalf of a number of our colleagues and myself, I am today introducing a joint resolution to authorize the President to issue a proclamation designating March 11-17, 1984 as "National Surveyors Week."

This resolution recognizes the important contribution surveyors have made throughout the history of our Nation, and focuses attention on the vital role the surveying profession plays in construction design, natural resource management and protection of private property rights.

The history of surveying in the United States is very closely tied to the development of the Nation itself. Presidents Washington and Jefferson earned licenses to be county surveyors in the Colony of Virginia. In fact, Thomas Jefferson, who chaired a committee formed under the Articles of Confederation in 1784 to devise a plan for disposing of lands west of the Thirteen Colonies, is credited with developing the rectangular survey system still used today in 38 States and administered by the Bureau of Land Management. Abraham Lincoln and Millard Fillmore were also surveyors prior to their elections as President, and our distinguished colleague from Virginia (Mr. WARNER) has some surveying experience.

Today's surveyors utilize modern and sophisticated equipment and techniques to locate and define boundary lines; plan roads and highways, utilities, and railroad rights-of-way; navigate oceans, rivers, harbors, and the air; and locate and record natural resources.

The surveyor has special education, training, experience, and knowledge of the principles of mathematics, the related physical and applied sciences, and requirements of law for adequate evidence. Professional surveyors provide vital services that are critical to many aspects of the issues Congress addresses. Land surveying is utilized in land development and planning, natural resource management, and protection of property rights. Marine or hydrographic surveying is important to dredging and navigation, coastal barrier protection, and water resources. Engineering surveys are used to study and select sites for construction, utilities, and mining operations. Geodetic surveying, the precise positioning of points on the surface of the Earth, is used by several Federal agencies for launching and landing long-range aircraft, missiles, and satellites.

The modern surveyor is a true professional whose judgment and expertise is needed by Government at all levels and many fields in the private sector. I am pleased to offer this resolution and urge prompt action by the Senate.

Mr. President, I ask unanimous consent that this joint resolution appear in the RECORD immediately following my remarks.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 44

Whereas the Congress of the United States recognizes the valuable contributions of the surveying profession to history, development and quality of life in the United States of America;

Whereas the surveying profession requires special education, training, experience, and knowledge of the principles of mathematics, the related physical and applied sciences, and requirements of law for adequate evidence; and

Whereas since the early days of our Nation when many of our forefathers, including our first and third Presidents, were surveyors, the profession of surveying has continued to be uniquely qualified to determine and describe land and water boundaries for the management of our natural resourses and the protection of private property rights; Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is hereby authorized and requested to issue a proclamation designating the week beginning on March 11, 1984, as "National Surveyors Week" and to urge the people of the United States to observe such week with appropriate ceremonies and activities paying tribute to professional surveyors and their contribution to society.

By Mr. BURDICK:

S.J. Res. 45. Joint resolution designating November 20 through 26, 1983, as "National Family Week;" to the Committee on the Judiciary.

NATIONAL FAMILY WEEK

● Mr. BURDICK. "The root of the kingdom is in the state. The root of the state is in the family." Mencius 372-289 B.C.

Mr. President, with this quote, today I am introducing again a joint resolution to authorize the President to issue a proclamation designating November 20 through 26, 1983, as "National Family Week."

The purpose of National Family Week is very simple. It is a specific time to recognize the importance of the family in American life and the fundamental role it has played in forming the values upon which our Nation is based. National Family Week is simply a way to encourage people to pause for a moment and reflect on the way families have affected their lives and the course of this Nation.

The designation of National Family Week has the support of many broad-based organizations including The American Legion, the Boy Scouts of America, the Salvation Army, and many similar groups.

In the past, National Family Week has been designated as the week in November which includes Thanksgiving. I am following that tradition again because of the appropriate and customary family gatherings that take place on Thanksgiving.

Congress has approved National Family Week resolutions for the last 7 years, as well as in 1972. Last year, 35 Senators cosponsored the National Family Week resolution with me, and over half the Members of the House cosponsored a similar measure. I urge both Houses to again recognize the value of National Family Week and approve the resolution I am introducing.

I ask unanimous consent that the resolution be printed in the RECORD.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 45

Resolved by the Senate and House of Representatives of the United States of America

in Congress assembled, That the President is hereby authorized and requested to issue a proclamation designating the week of November 20 through 26, 1983, as "National Family Week," and inviting the Governors of the several States, the chief officials of local governments, and the people of the United States to observe such week with appropriate ceremonies and activities.●

By Mr. CRANSTON:

S.J. Res. 46. Joint resolution requiring the Federal Energy Regulatory Commission to commence a rulemaking relating to natural gas pipeline rate designs, and to report its findings, conclusions, and recommendations; to the Committee on Energy and Natural Resources.

NATURAL GAS PIPELINE RATE DESIGNS

Mr. CRANSTON. Mr. President, on Saturday President Reagan told the Nation of his plan to decontrol all natural gas prices over the next 3 years.

I disagree with the President's plan. It goes in the wrong direction.

Producers do not require higher prices as an incentive for production. The natural gas market is glutted.

There is no need to decontrol old or new gas. Decontrol of old cheap gas, as President Reagan proposes, would produce a bonanza for the large oil companies that own most of the low-cost gas—and a catastrophe for the consumer, who is already suffering.

Any benefits to the consumer from Reagan's plan will be very short lived at best and more probably nonexistent.

Even the President admits that his plan will raise prices. Estimates by consumer groups are that residential gas bills could go up by as much as 67 percent under the President's plan over the next 4 years.

An additional $50 billion could be added to the Nation's natural gas bill. And since natural gas is a major element in industrial production, farming, and the heating of factories and stores, these rising costs would also be passed along to consumers.

Mr. President, in southern California for instance, gas bills are already about 50 percent higher than last year. The Southern California Gas Co., the largest gas distributor in southern California, estimates that during the past year residential utility bills have risen more than $1 billion.

While Californians used 40 percent less natural gas per household in 1981 than in 1970, each unit cost nearly four times as much.

And California has lower energy prices on average than those in much of the rest of the country.

According to a recent article in the New York Times, in January natural gas cost almost 60 percent more per unit in New York City than in Los Angeles. We all know that higher consumption resulting from the colder weather experienced in the Northeast and Midwest multiplies this gas price difference and adds to the burden on consumers.

Mr. President, today's skyrocketing natural gas costs at a time of abundant supply—in fact oversupply—defy conventional economics law.

The 43 million American households who heat with natural gas are justifiably enraged over accounts of low-cost gas being shut in while high-cost gas is shipped to utility companies that pass costs on to their customers.

These same citizens cannot understand why pipeline companies negotiate contracts for exorbitantly priced Algerian liquefied natural gas at $7 per thousand cubic feet (MCF) when domestic gas at 50 cents MCF is going begging.

Mr. President, phrases like "take or pay" or "most favored nation" mean little to the elderly widow in Los Angeles who writes that she is now down to living in only one room because that is all she can afford to heat.

The jump in natural gas prices during the last year is having a devastating effect on American consumers and must be an urgent item of top priority in the 98th Congress.

The Natural Gas Policy Act of 1978 (NGPA) was a compromise created to deal with longstanding problems in the gas industry which resulted in the severe gas shortages of the 1970's.

The NGPA was designed primarily to promote conservation, to induce exploration and additional production, and to move intrastate gas into the interstate market.

It has accomplished those aims.

But, under deals made when gas was in short supply, producers negotiated with pipelines contracts with high purchase obligations—contracts that set prices at maximum allowable levels and permitted frequent price escalations. And utilities signed long-term contracts for expensive new and deep-well gas, and for costly foreign gas.

Many contracts required transmission companies to pay producers according to a set schedule, whether or not they needed the gas at the time.

These long-term contracts with take-or-pay provisions, combined with regularly scheduled increases in the price of new gas permitted by the NGPA, have been instrumental in driving prices up, and keeping them up.

Utilities have contracts with only one or two pipelines. Their contracts force them to take whatever mix of gas is presented to them. They cannot shop around. Nor can the residential consumer who bears the ultimate burden of this noncompetitive situation. He has only one source, his local utility, for the fuel with which he warms his house, heats his water, or cooks his food.

Large industrial users often have the capacity to use other fuels besides natural gas. When prices rise as they have been, these industrial customers can convert to oil or coal. The householder has no such luxury.

And this fuel switching compounds the problem of the residential consumer who finds the capital costs of the pipeline transmission system—which is included in his gas prices—spread over fewer and fewer customers. So his gas bill goes up yet again.

Today I am introducing a joint resolution which will result in relief from rapidly escalating prices natural gas consumers are paying around the country. This resolution, identical to one introduced at the end of the previous Congress by Congressman JULIAN DIXON from California's 28th District and reintroduced by him in January, attempts to deal with one important aspect of this problem.

It proposes no new legislation.

Instead it calls upon the Federal Energy Regulatory Commission (FERC), the regulatory body established by Congress to supervise the natural gas market, to use powers it already has to give distributors who supply gas to consumers some additional leverage in deciding what kind of gas to buy and how much they can afford to pay for it.

It gives utility companies the power to refuse unwanted quantities of high-cost gas.

In my view, FERC has the authority under the Natural Gas Act of 1938 and the Natural Gas Policy Act of 1978 to allow this discretionary purchase authority, but has failed to exercise it.

Consequently, the joint resolution I am introducing today calls on FERC to revise the rate design of natural gas pipleline companies through its rulemaking authority. Further increases in natural gas prices should be reduced considerably, if gas distribution companies are permitted to exercise discretion in buying high-cost gas supplies.

I believe that one of the major causes of today's high natural gas prices to consumers in FERC's practice of permitting interstate pipeline companies to average in the price of high-cost gas in the supplies sold to local utilities even though there is a plentiful supply of lower cost gas available for them to sell.

If utility companies had the power to buy high-cost gas only when needed, many extremely high-price purchases would be avoided.

This rulemaking would provide a mechanism whereby market signals about gas prices for both residential and industrial customers would be transmitted back to pipelines, and ultimately to the producers of natural gas. The local distributor of natural gas, the one who must deal with the consumer who pays the bills, is in a good position to provide that market signal.

Mr. President, my resolution calls upon FERC to consider four options:

First, establish a market-clearing price standard with reference to a competitive, appropriate alternative energy price, say No. 6 oil, to determine what should be considered high-priced natural gas.

Second, establish a procedure which would preclude pipeline companies from rolling in the price of this now defined high-cost natural gas with lower cost supplies, raising the mix price to an unmarketable price level.

Third, adjust service agreements between pipelines and local distribution companies to allow local companies to purchase natural gas which not only meets the market clearing price standard but also gives local distribution companies the flexibility to purchase high-cost natural gas if they have the market for it.

Fourth, require pipeline companies to exercise "market out" rights in any contract for the purchase of natural gas, if it is shown that the price in that contract would cause severe distortion and hardship in the relevant natural gas market.

After considering these alternatives, the resolution calls upon FERC to report its findings and conclusions to the President, the Committee on Energy and Commerce of the House of Representatives, and the Committee on Energy and Natural Resources in the Senate, together with any recommendation for legislation.

Mr. President, my resolution is an urgent call for FERC to examine powers it already has to alleviate the market which is burdening our citizens so sorely.

Other actions may well be needed. But these do not include decontrol of old gas as the administration proposes with the sharp and immediate financial burden it would impose on all users of natural gas.

There is a dramatic lack of consensus within the industry, the administration, and in this Congress as to what long-term solution will best provide an abundant supply of this relatively clean, desirable fuel at a price people can afford.

There is an urgent need for more understanding of what has been going on in the natural gas market and distribution system, the reasons behind the situation in which we find ourselves, and an intelligent gathering of facts and opinions.

Thus, I fully support the ongoing GAO study of natural gas price increases which was first requested by my colleague, Senator EAGLETON, and several Members of the other body.

And I wholeheartedly favor the hearings on this issue which will be held before the appropriate Senate and House committees commencing this month.

More study is needed. But, in the meantime, I urge my colleagues to look seriously at this resolution and pass it quickly in order to get some immediate action without waiting for a major legislative remedy which could be months away.

Surely FERC, as well as the Congress, should be doing all that is within its power to correct the distorted rate patterns which are so damaging to the consumers of California and our nation.

Mr. President, I ask unanimous consent that the resolution be printed immediately following my remarks.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 46

Whereas natural gas is an essential fuel used by many in the preservation of health and life itself;

Whereas the cost of natural gas has risen dramatically over the last several years;

Whereas continued increases in natural gas prices will cause severe economic dislocations and hardships and will adversely affect commerce;

Whereas interstate natural gas pipeline companies (hereinafter in this joint resolution referred to as "pipeline companies") are acquiring supplies of certain categories of natural gas at prices in excess of what the end-use market would support if such supplies were sold separately and not on a rolled-in basis;

Whereas under current regulations, local natural gas distribution companies (hereinafter in this joint resolution referred to as "local distribution companies") are required to pay for high-cost natural gas when the price of such gas is rolled-in with the price of other gas;

Whereas it is essential that local distribution companies be given the option not to purchase such high-cost natural gas so that the local distribution companies can help protect their residential and other customers from continuing increases in utility bills; and

Whereas under the Natural Gas Act and the Natural Gas Policy Act of 1978, the Federal Energy Regulatory Commission (hereinafter in this joint resolution referred to as the "Commission") through its authority over pipeline companies' tariffs and service agreements, has an obligation to protect the public interest, including the interest of natural gas ratepayers: Now, therefore, be it

Resolved by the Senate and House Representatives of the United States of America in Congress assembled, That within sixty days after the date of the adoption of this joint resolution, the Commission shall commence a rulemaking relating to natural gas pipeline rate designs. In the course of such rulemaking, the Commission shall consider alternatives to insure that the market clearing prices in the areas of local distribution companies are reflected in such rate designs. Such alternatives shall include the following:

(1) Procedures to preclude pipeline companies from rolling-in the price of high-cost natural gas.

(2) Establishment of a market clearing price standard, with reference to an appropriate alternate energy price, to determine what is to be considered high-cost natural gas.

(3) Adjustment of service agreements between pipeline companies and local distribution companies to—

(A) allow local distribution companies to purchase natural gas which meets the market clearing price standard, and

(B) give local distribution companies the flexibility to purchase high-cost natural gas.

(4) Action to require pipeline companies to exercise market-out rights in any contract for the purchase of natural gas upon a showing that the contract price would cause severe distortion and hardship in any relevant natural gas market.

The Commission, within one hundred and eighty days after the date of the commencement of this rulemaking, shall report its findings and conclusions to the President of the United States and to the Committee on Energy and Commerce of the House of Representatives and the Committee on Energy and Natural Resources of the Senate, together with any recommendations for legislation.

ADDITIONAL COSPONSORS

S. 11

At the request of Mr. CRANSTON, the name of the Senator from Hawaii (Mr. INOUYE) was added as a cosponsor of S. 11, a bill to amend title 38, United States Code, to establish a Veterans' Administration Advisory Committee on Women Veterans; to improve various aspects of Veterans' Administration health-care programs; to extend the period for Vietnam-era veterans to request counseling under the Veterans' Administration readjustment counseling program; to promote the recruitment and retention of certain health-care personnel in the Veterans' Administration's Department of Medicine and Surgery; to express the sense of the Congress with respect to the role of the Administrator of Veterans' Affairs; to require the Administrator of Veterans' Affairs to conduct an epidemiological study of long-term health effects in veterans of exposure to ionizing radiation from nuclear test detonations; and for other purposes.

S. 17

At the request of Mr. DOLE, the name of the Senator from Indiana (Mr. LUGAR) was added as a cosponsor of S. 17, a bill to expand and improve the domestic commodity distribution program.

S. 222

At the request of Mr. KASTEN, the names of the Senator from South Carolina (Mr. THURMOND), the Senator from Tennessee (Mr. SASSER), the Senator from Illinois (Mr. DIXON), and the Senator from Louisiana (Mr. LONG) were added as cosponsors of S. 222, a bill to repeal the withholding of tax from interest and dividends and to require statements to be filed by the taxpayer with respect to interest, dividends, and patronage dividends.

S. 414

At the request of Mr. HEINZ, the name of the Senator from Arizona (Mr. GOLDWATER) was added as a cosponsor of S. 414, a bill to amend and

clarify the Foreign Corrupt Practices Act of 1977.

S. 610

At the request of Mr. SPECTER, the name of the Senator from Texas (Mr. TOWER) was added as a cosponsor of S. 610, a bill entitled the "Collegiate Student-Athlete Protection Act of 1983."

S. 631

At the request of Mr. BYRD, his name was added as a cosponsor of S. 631, a bill to establish a national technology education grants program to provide matching Federal assistance to joint initiatives by private industry, educational institutions, and State government to strengthen science, engineering, and technical education, and for other purposes.

SENATE RESOLUTION 31

At the request of Mr. PROXMIRE, the name of the Senator from Alabama (Mr. DENTON) was added as a cosponsor of Senate Resolution 31, a resolution expressing the sense of the Senate that the President take certain diplomatic actions relating to the development, production, stockpiling, and use of bacteriological and toxin weapons.

SENATE RESOLUTION 77—DISAPPROVING DEFERRAL OF CERTAIN BUDGET AUTHORITY

Mr. D'AMATO (for himself, Mr. HEINZ, Mr. DIXON, Mr. MOYNIHAN, and Mr. LAUTENBERG) submitted the following resolution; which, pursuant to the order of January 30, 1975, was referred jointly to the Committee on Appropriations and the Committee on the Budget:

S. RES. 77

Resolved, That the Congress disapproves the proposed deferral D83-59 relating to the Urban Mass Transportation Administration Mass Transit Capital Fund, as set forth in the message of February 1, 1983, which was transmitted to the Congress by the President. This disapproval shall be effective upon approval of this resolution and the amount of the proposed deferral disapproval herein shall be made available for obligation.

● Mr. D'AMATO. Mr. President, today I am joined by my colleagues Senators HEINZ, DIXON, MOYNIHAN, and LAUTENBERG, introducing a resolution disapproving the administration's deferral of urban mass transportation funds.

During the last session of Congress, the Members of this body spent many long days debating a comprehensive infrastructure measure which included funds for this Nation's highway and mass transit systems. The culmination of this long effort was, I believe, a good bill which will help repair our rapidly deteriorating infrastructure and put Americans back to work.

Title III of the Federal Public Transportation Act of 1982, which deals with mass transit authorizations, represents a carefully crafted compromise among many competing interests. After 2 years of debating the mass transit authorization issue, we were finally able to reach an accord on funding formulas, operating assistance levels, and many other important matters.

One of the highlights of the mass transportation provisions of Public Law 97-424, which was signed into law on January 6, is the creation of a section 9 mass transit formula block grant program. For the first time in the history of the Federal mass transit program local transit properties will receive funds on the basis of predictable, service-related factors. This will afford transit operators the needed flexibility to meet the challenges of the future.

The legislation directs that $779 million of the proceeds from the gas tax be made available to fund the section 9 block grant in fiscal year 1983. I and many other Members of the Senate predicated our support of the entire legislative package on the funds which would be allocated to mass transit in general and the formula block grant section in particular.

Unfortunately, OMB has transmitted a deferral of $229 million of the $779 million sum included for the section 9 block grant. As I told Mr. Stockman at the Appropriations Committee hearing several weeks ago, this deferral is ill-conceived and is contrary to understandings which I believe the Congress had with the administration regarding this legislation.

Mr. President, the demand for mass transit capital projects which can be implemented immediately far exceeds the entire mass transit budget. It is clear that the obligation of this $229 million would permit transit properties to engage in sorely needed capital improvement projects. Moreover, these funds would support nearly 18,000 full-time equivalent jobs.

It is for these reasons that I am compelled to introduce this resolution which disapproves the deferral of these mass transit capital funds. Congress made its will known several months ago when this measure was signed into law. I would have thought this matter was settled. Unfortunately, such is not the case. I urge the Senate to act expeditiously and pass this resolution so that the full impact of the action we took a short time ago may be realized.●

● Mr. LAUTENBERG. Mr. President, I am pleased today to join as a cosponsor of Senate Resolution 77 offered by my distinguished colleague from New York, Senator D'AMATO. Senate Resolution 77 will deny the deferral of funding for much-needed assistance to our Nation's mass transit capital facilities. These funds are of critical importance to my State of New Jersey and other States which are dependent on mass transit for their economic well-being.

In the gas tax legislation passed by the Congress and signed by the President, mass transit was to receive 1 cent of the 5-cent increase in revenues. This was an important victory for mass transit and a credit to the wisdom of the Senate. It was also a tribute to the efforts of the Senate Committee on Banking and Urban Affairs, its chairman Senator GARN and its entire membership. Senator D'AMATO worked particularly hard to insure that mass transit capital and operating needs received the attention they deserve.

Yet, it was not long before the administration moved to impose substantial cuts in mass transit, far out of proportion to any other surface transportation reductions. Should this be allowed to happen, mass transit's victory of last year will have been a brief and bitter one indeed.

Again, I join my esteemed colleague in his effort to restore these badly needed funds.●

NOTICES OF HEARINGS

COMMITTEE ON THE BUDGET

Mr. DOMENICI. Mr. President, the Senate Committee on the Budget has changed the hearing scheduled for Thursday, March 3, 1983 at 10 a.m. to Monday, March 7, 1983 at 10 a.m. The hearing will be held in SD-608. At this hearing the committee will receive testimony on defense matters from Senator JOHN TOWER, chairman of Senate Committee on Armed Services.

For further information, contact Nancy Moore of the Budget Committee at 224-4129.

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. McCLURE. Mr. President, I would like to announce for the information of the Senate and the public that the oversight hearing regarding the Energy Emergency Preparedness Act scheduled for Monday, March 7, will begin at 9:30 a.m. instead of 10 a.m.

In addition, the full committee hearing on pending natural gas legislation scheduled for Friday, March 11 will be held in room SD-106 instead of room SD-366.

SUBCOMMITTEE ON PUBLIC LANDS AND RESERVED WATER

Mr. WALLOP. Mr. President, I would like to announce for the information of the Senate and the public the scheduling of a public hearing before the Subcommittee on Public Lands and Reserved Water to consider S. 627, to authorize the establishment of a scenic area to assure the protection, development, conservation, and enhancement of the scenic, natural, cultural, and other resource values of the Columbia River gorge in the

States of Oregon and Washington, to establish national policies to assist in the furtherance of this objective, and for other purposes.

The hearing will be held on Friday, March 25, beginning at 9 a.m. in the Bonneville Power Administration's auditorium located at 1002 NE. Holladay, Portland, Oreg.

Those wishing to testify should contact Senator HATFIELD's Portland, Oreg., office, 114 Pioneer Court House, Portland, Oreg. 97204; phone: 503-221-6374 no later than March 17, 1983. Witnesses will be limited in time for oral testimony. Complete written statements will be placed in the Record. Witnesses should bring 15 copies of their testimony to the hearing with them. Do not submit testimony in advance.

For further information regarding this hearing you may wish to contact Mr. Tony Bevinetto of the subcommittee staff at 202-224-5161 or Senator HATFIELD's Portland office at the above-mentioned number.

SUBCOMMITTEE ON ENERGY RESEARCH AND DEVELOPMENT

Mr. DOMENICI. Mr. President, I would like to announce for the information of the Senate and the public the scheduling of a public hearing before the Subcommittee on Energy Research and Development to receive testimony from outside witnesses on the President's proposed budget for fiscal year 1984 for the Department of Energy's research and development programs under the jurisdiction of the subcommittee—energy research programs, conservation and renewable energy programs, nuclear energy programs and nuclear waste activities. The hearing will be held on Thursday, April 21, beginning at 9:30 a.m. in room SD-366 of the Dirksen Senate Office Building.

Those wishing to testify or who wish to submit written statements for the hearing record should write to the Subcommittee on Energy Research and Development, room SD-360, Washington, D.C. 20510.

For further information regarding this hearing you may wish to contact Mr. Paul Gilman of the subcommittee staff at 224-4431.

SUBCOMMITTEE ON ENERGY AND MINERAL RESOURCES

Mr. WARNER. Mr. President, I would like to announce for the information of the Senate and the public the scheduling of a public oversight hearing before the Subcommittee on Energy and Mineral Resources regarding the strategic problem reserve. The hearing will among other things analyze the administration's drawdown plan; the administration's funding of the SPR; and the current construction program for the SPR. The hearing will be held on Thursday, March 17, beginning at 9 a.m. in room SD-366 of the Dirksen Senate Office Building.

Those wishing to testify or who wish to submit written statements for the hearing record should write to the Subcommittee on Energy and Mineral Resources, room SD-360, Washington, D.C. 20510.

For further information regarding this hearing you may wish to contact Mr. Roger Sindelar of the subcommittee staff at 224-5205.

AUTHORITY FOR COMMITTEES TO MEET

COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on Energy and Natural Resources be authorized to meet during the session of the Senate on Thursday, March 10, 1983, to hold a hearing on S. 615, the President's natural gas bill, and other pending natural gas bills.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on Energy and Natural Resources be authorized to meet during the session of the Senate Wednesday, March 9, 1983, to hold a hearing on S. 615, the President's natural gas bill, and other pending natural gas bills.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I ask unanimous consent that the Committee on Energy and Natural Resources be authorized to meet during the session of the Senate on Friday, March 11, 1983, to hold a hearing on S. 615, The President's natural gas bill, and other pending natural gas bills.

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON INTERGOVERNMENTAL RELATIONS

Mr. BAKER. Mr. President, I ask unanimous consent that the Subcommittee on Intergovernmental Relations of the Committee on Governmental Affairs be authorized to meet during the session of the Senate on Thursday, March 3, at 9:30 a.m., to hold an oversight hearing on OMB's Circular A95.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

MODIFICATION OF WITHHOLDING RULES

● Mr. DOLE. Mr. President, this morning the Treasury Department announced that it would modify the withholding regulations to accommodate legitimate concerns raised by the financial institutions and by my colleagues. At the same time, the Treasury Department again confirmed that it would maintain its support for the interest and dividend withholding provision. I shall submit at the conclusion of my remarks a letter form the Secretary of the Treasury announcing these changes and the text of the Treasury press release to be printed in the RECORD.

Mr. President, I welcome the Treasury announcement. Many of my colleagues know of my support for withholding on interest and dividends. At a time when we are losing about $8 billion annually from unreported interest and dividends and between 19 and 20 million taxpayers fail to fully report their interest and dividend income, a strong legislative response to improve compliance was necessary. Before we raise taxes to narrow the Federal deficit, we should collect the taxes already owed. Withholding is the most powerful and most effective means to narrow that gap. Moreover, fairness to wage earners (who pay about 99 percent of the tax they owe) dictates that we also collect Federal income taxes owed on other types of income.

At the same time, we want the withholding regulations to work efficiently. A number of my colleagues have worked with the Treasury to make some important modifications to those proposed rules. Senator DURENBERGER, Senator SYMMS, Senator BOSCHWITZ, Senator COHEN, and Senator LEVIN, among others, have worked with the Treasury Department, to simplify, streamline, and clarify the Treasury rules. Today's changes make important improvements for small banks and for large banks. Generally, the extension of annual withholding to money market accounts and to super-NOW checking accounts is particularly helpful for the small banks. For the large banks, the publication of original issue discount prices and simplification of the nominee rules are probably of principal importance.

Mr. President, we have again demonstrated our willingness to improve the interest and dividend withholding system to respond to legitimate concerns. I believe that it is incumbent upon members of the banking industry to join with us in making any necessary further improvements, while at the same time reassuring the American public on the effectiveness of withholding and publicly disavowing the misleading campaign many have waged against this new law. It is time for our Nation's financial institutions to stand up and be counted on the key issues of reducing Federal deficits and curtailing tax cheating.

We have dealt today with almost all of the outstanding issues of concern. Compliance with the new rules will be simpler for savers and for financial institutions. To the extent that we identify other areas in which modifications are appropriate, Secretary Regan has

assured me that they will make further modifications.

I welcome this opportunity to work further with my colleagues and the Treasury on this important problem.

MARCH 2, 1983.

TREASURY ISSUES WITHOLDING RULE REVISIONS

The Department of the Treasury today announced revisions to the regulations regarding withholding on dividends and interest and on the broadened information reporting rules, to take into account concerns raised by Members of Congress and affected financial institutions.

The announcement states that Treasury will defer the effective date for withholding with respect to original issue discount instruments until January 1, 1984. The Treasury stated that it recognized that withholding on original issue discount before that time would result in undue hardship to institutions. Similar relief is provided concerning the new information reporting requirements. All other withholding provisions are effective July 1, 1983. Treasury and the Internal Revenue Service will commence publication of information regarding outstanding original discount instruments in June 1983.

Today's other revisions relate to: payee unknown, year-end withholding, tansactional reporting, nominees, and backup withholding.

"The Administration remains committed to the withholding provisions," said Treasury Secretary Donald T. Regan. "We think it is the most effective means of improving the collection of taxes on unreported interest and dividend income. We believe that the changes described in today's announcement and forthcoming regulations will go far to respond to the concerns raised by the financial industry. They will simplify the operation of the withholding rules. We look forward to continuing to work with the industry to assure that withholding goes into effect on July 1 with minimum disruption."

The announcement is attached.

The Treasury Department and the Internal Revenue Service are completing their review of the comments received regarding the regulations under the interest and dividend withholding and broadened information reporting provisions of the Tax Equity and Fiscal Responsibility Act of 1982. It is expected that these regulations, revised to take into account the comments received, will be published as final regulations in the near future. Proposed regulations concerning the allocation of the credit for tax withheld from interest and dividends among trusts and estates and their beneficiaries will be published shortly thereafter.

Discussed below are some of the areas in which the withholding and information reporting regulations will be revised.

(1) *Original Issue Discount.* A number of persons expressed concern that payors would be unable to determine the amount subject to withholding with respect to instruments issued at a discount. The Treasury Department and Internal Revenue Service will take the following steps to insure that payors are able to calcuate readily the original issue discount attributable to these instruments:

(a) *Treasury Bills.* Commencing June 15, 1983, the Treasury will publish on a quarterly basis a list showing the original issue discount (based on the noncompetitive price), maturity date, and CUSIP number for Treasury bills maturing during the following quarter. Attached is a sample schedule setting forth the information which will be provided. This information will enable payors to determine readily the amount of discount income associated with Treasury bills. Persons are encouraged to comment on the format for presenting this information.

(b) *Other Discount Instruments.* On June 15, 1983, the Internal Revenue Service will commence publication of information concerning outstanding publicly-traded discount instruments. The publication will provide the following information: (i) for long-term discount instruments (maturities in excess of 1 year), the name of the issuer, identification of issue, date of issue, and amount of discount to be reported to a holder during the calendar year; and (ii) for short-term instruments (not exceeding 1 year), the name of the issuer, identification of issue, date of issue, issue price, redemption price and original issue discount. The withholding and information reporting regulations will relieve payors of liability for failure to withhold tax or furnish information on original issue discount on any instruments with respect to which information is not provided in the publication.

(2) *Undue Hardship.* Under the temporary and proposed regulations, applications for deferral of application of some or all of the withholding provisions were to be made, in general, not prior to April 1. A revenue procedure will be issued within a few days providing detailed information as to the circumstances under which an institution will be considered unable to comply with the withholding provisions without undue hardship, thereby qualifying for deferral of some or all of the withholding provisions (but, in accordance with the law, not beyond December 31, 1983). A rule will be provided concerning the availability of relief under this provision with respect to the requirement of withholding on original issue discount. Many persons have commented that it will be difficult or impossible to commence withholding on July 1 with respect to original issue discount. Although the publications described in (1) above ultimately will alleviate the problems of withholding on original issue discount, it is clear that payors generally will not be able to develop procedures for withholding on original issue discount by July 1, 1983 notwithstanding their efforts to do so. Accordingly, the Treasury Department will permit payors to delay the application of the withholding provisions to original issue discount until December 31, 1983 because of the undue hardship that would result from payors attempting to comply with such withholding requirements prior to that time. Payors will not be required to make application to the Internal Revenue Service to qualify for the delay in application of the withholding rules to original issue discount. Payors who are able to commence withholding on original issue discount prior to December 31 may do so, also without application to the Internal Revenue Service. The Internal Revenue Service also will consider the lack of information regarding original issue discount instruments to constitute reasonable cause for failure to comply with the expanded information reporting requirements added by the Tax Equity and Fiscal Responsibility Act of 1982 until December 31, 1983. The Internal Revenue Service previously stated that reasonable cause for failure to comply with these reporting requirements would be considered to exist for discount instruments until April 1 and July 1 in Announcement 83-6.

(3) *Payee Unknown.* Many financial institutions stated that it would be difficult to administer a rule requiring withholding upon payments with respect to which the institution is unable to determine the identity of the payee at the time the payment is first received. In many of these cases, institutions are able to identify the payee as an exempt recipient within a short time after receiving the payment. The final regulations will allow up to 60 days to confirm the ownership of payments in these situations before withholding will be required.

(4) *Year-End Withholding.* The final regulations will confirm that the election to defer withholding until year-end will be available for regular savings accounts, interest-bearing checking accounts and their equivalents, including the new money market accounts and SUPER-NOW checking accounts.

(5) *Transactional Reporting.*

(a) Where an interest coupon or savings bond is presented to a middleman for payment, the regulations will provide that only the name of the middleman, and not the name of the issuer of the obligation, should be reported on Form 1099. In addition, one Form 1099 may be used to show all payments made as part of a single transaction irrespective of whether the payments are made on obligations of different issuers.

(b) Persons presenting coupons from tax-exempt obligations must certify in writing that interest represented by the coupon is tax-exempt. Payors can rely on such certifications in not withholding or filing information reports with respect to such coupons. A statement that interest coupons are tax-exempt on the envelope commonly used by financial institutions to process such coupons, signed by the taxpayer, will be sufficient for this purpose if the envelope is properly completed (i.e., shows the name, address and taxpayer identification number of the taxpayer).

(6) *Nominees.* The final regulations will provide that nominees may be treated as exempt recipients without being required to file an exemption certificate if the nominee is known generally in the investment community as a nominee or is listed in the American Society of Corporate Secretaries, Inc. Nominee List.

(7) *Backup Withholding.* The backup withholding provisions added by the Tax Equity and Fiscal Responsibility Act of 1982 will not apply to payments of interest, dividends or patronage dividends that are within the scope of the 10 percent withholding provisions. The backup withholding provisions will not apply even if one or more exceptions to the 10 percent withholding rules applies to the payment (such as the exception for payments to exempt recipients, exempt individuals, and the minimal interest payment exception).

THE IR MAVERICK MISSILE

● Mr. GOLDWATER. Mr. President, recently, "60 Minutes" the Sunday evening news program sponsored by Columbia Broadcasting System had a program on which they severely criticized, condemned, and belittled the IR Maverick missile. What they did to come up with this very shoddy bit of programing was to go back in history and look at the weapon in the 1970's when we were having problems with it. Those problems have long since been cured and the weapon is now extremely effective and, shortly will be in the inventory of all the services.

The "60 Minutes" program was so bad it prompted me to write a letter to Mr. William Paley, chairman of the board of CBS. Part of the letter was read on a subsequent program of the "60 Minutes" show. But, to bring home to my colleagues a little more forcefully at just how inaccurate the program was, I ask that an article appearing in the March issue of the Air Force Magazine be printed at this point in my remarks following a copy of the letter that I wrote to Mr. Paley.

The material follows:

FEBRUARY 15, 1983.

Mr. WILLIAMS S. PALEY,
Chairman of the Board, Columbia Broadcasting System, New York, N.Y.

DEAR BILL: Having viewed your "60 Minutes" program on the IR Maverick missile, I am writing to express my disappointment in your treatment of the issue.

To begin with, the producers apparently relied almost exclusively on outdated information to discredit the performance of the missile. An interview with a retired Air National Guard pilot, whose experience was limited to the TV Maverick, is of questionable relevance. And the interview with Russ Murray consisted of nothing more than a dusting off of early development test results obtained almost five years ago. It is old information and no matter how dressed up, it does make a new story.

In fact, the results of the tests conducted in 1978 and 1979 led to significant changes in the software of the missile—changes which, in subsequent tests, have proven successful and will be incorporated in production missiles. That is, in fact, the very purpose of development testing: find the bugs and correct them before entering production. But, I worry over the integrity of the development process when early test results are repeatedly resurrected and paraded in the national media, as if new, to discredit a weapon system.

Next, the "60 Minutes" program clearly implied that the GAU-8 30mm cannon on the A-10 aircraft should be favored over the Maverick. If you really are persuaded that the GAU-8 is a more effective and survivable antitank weapon than the Maverick there are a few considerations you may have overlooked. One of these is the lethal range of the Soviet ZSU-23, SA-6, SA-7, SA-9, SA-11, SA-13, and SA-14 air defense systems. If you measure the distance from the A-10's in your films to the tanks they are firing at, you would note that those aircraft are squarely within the lethal envelope of the Soviet weapons. No aircraft will long survive in that environment.

There are two fundamental principles in combat: destroy the enemy and survive. The IR Maverick is designed to accomplish both. The IR Maverick has demonstrated better than 80 percent probability of being able to lock on, track and destroy targets even at ranges well outside the envelope of the most common battlefield air defense systems (ZSU-23 and SA-7). The IR Maverick will do all this in the dead of night. Did it occur to anyone to wonder what the GAU-8 will do for you at night?

The program stated that the Pentagon was denied an opportunity to respond because they made demands that were "unacceptable". What on earth is so unreasonable about a request to make an unedited response? I would suggest that Pentagon officials have seen enough of "60 Minutes" to know that no effort will be spared in your editing room to make those who do not agree with your premise appear foolish, inconsistent, and misinformed. It is your deck of cards. You do all the shuffling, you deal and you make up the rules—I wouldn't want to play in that game either.

The simple truth is that the Maverick has survived because it is working and we need it. Ask the pilots who may one day stake their lives on it—I have and the answer is always the same: they want Maverick.

CBS programmers succeeded in putting together what most viewers will believe is a convincing case against the IR Maverick. In truth, you have shamefully deceived the American public. You have presented only the argument of an uninformed and biased minority while rejecting the overwhelming support of a very knowledgeable majority.

The information necessary to balance your program was available. And let's not be coy. Just because someone does not wish to subject himself to public humiliation through selective editing does not mean he is any less honest or knowledgeable than those who so eagerly seek the spotlight. Isn't it time we question whether the predatory journalistic practices of "60 Minutes" have become so well known that you may never again be able to present fairly both sides of any controversy?

As a frequent viewer of "60 Minutes" I am growing increasingly dissatisfied and impatient with this sort of dishonest reporting. The American public is entitled to hear the truth—and that means both sides of the issue. Perhaps it will require an act of Congress to ensure that they do.

Sincerely,

BARRY GOLDWATER.

THE MANY BATTLES OF MAVERICK

(By John T. Correll)

The Air Force urgently needs a better weapon to counter massive armored assaults in the event of a conventional war in Europe. The cannon on the A-10 attack aircraft is a certified tank-buster, but cannot be used from standoff range. The TV-guided AGM-65A Maverick missile is limited to the daylight hours.

The best answer, USAF believes, is the Hughes AGM-65D, an imaging infrared (I^2R) variant of the battle-tested Maverick line. Whereas the TV Maverick picks up visual target images, the I^2R version senses the heat given off by a target. The Pentagon has not announced what the effective standoff range of the IR Maverick against a tank is, but the published estimates of five to six miles sound reasonable. That would be a substantial improvement over what's possible with the TV missile.

In a test program completed last year, the IR Maverick scored twenty direct hits out of twenty-six launches. The Air Force leadership firmly believes it has a good missile and wants to proceed with fielding it, hoping eventually to have 60,000 IR Mavericks in its inventory.

But in Washington, the heat-seeking IR Maverick is running into about as much heat as it can handle. The Washington Post has repeatedly attacked the program, calling it a "Fiasco in Weaponsland." The General Accounting Office charges that "evidence is lacking that the IR Maverick can be effectively used by US military personnel in combat." And Capitol Hill has doubts, too. So far, the Air Force has only been able to get funding for a limited pilot production of 200 missiles.

Among the allegations are that the IR Maverick won't perform in bad weather, that it can't acquire a valid target from standoff range, and that it has been tested under unrealistically benign conditions. The Air Force and the Department of Defense reject these conclusions and feel the critics are either misinterpreting or overlooking significant data.

"I think IR Maverick suffers somewhat from its history," says Lt. Gen. Lawrence A. Skantze, Air Force Deputy Chief of Staff for Research, Development and Acquisition. "If you go back to the mid- to late-1970s when we were initially developing the program, we had problems with it. Infrared tracker development at that time was not as sophisticated as we needed, and it could be spoofed by cannon fire and hot rocks and what have you. What I would now call ancient history tends to persist, though, and a lot of the critics are going back to that, not necessarily looking at what we've accomplished, say, in the last six months to a year in the program."

Responding to a June 1982 GAO report critical of the IR Maverick, for example, the Defense Department said the GAO analysis was based largely on 1977 and 1978 data and had not considered most of the recent test results in full-scale development. This is especially significant, because after those early tests the IR tracker was redesigned from an analog system to a digital one.

Slipped schedules and cost overruns have hurt the IR Maverick's reputation, and there have been problems with reliability and maintainability. The R&D contract was for a fixed-price incentive-fee, so after costs exceeded the ceiling, further expenses were borne by Hughes. Production costs grew, too, and for three reasons: inflation, increased complexity—such as the conversion from analog to digital—and restructuring of the acquisition, leading to program delays and less than efficient rates of production.

It now appears the unit cost for IR Maverick will be $100,000.

"I think our concern for the cost now is to get an efficient production rate," General Skantze says. "That's what's going to bring the cost down for us."

The decision to go into limited pilot production was postponed for several months last year to allow for completion of the initial operational test and evaluation process after a series of launch failures. However, long-lead funding for the IR Maverick was provided.

Only two of the six failures in the launch program were guidance-related. Two were caused by simple solder joint failures, another by inadvertent grounding of the g-bias signal, and a fourth by a software coding error. No problem was found with the basic integrity of the system.

The Air Force say it has a correction for every technical problem discovered in development and operational testing, and in December began flying reliability and maintainability validation tests to demonstrate those corrections. While acknowledging that the program has not been a model acquisition, the Air Force believes the IR Maverick is a missile it can go to war with.

TV AND ITS LIMITS

The first Maverick, the TV-guided A model, has been in use since 1973. It was among the first of the "smart" missiles that revolutionized air-to-ground warfare. One hundred Mavericks have been launched in combat—most of them by the Israelis—and eighty-seven of these were direct hits. Another five were deliberate near misses that disabled their tank targets, as intended, rather than destroying them. (By contrast, one study finds that the probability of hitting a tank with an iron bomb is less than four percent, and that with a nonprecision guided munition, the probability is twenty-eight percent.)

Despite this, critics have indicted the TV Maverick along with the IR Maverick in the present controversy, contending that the whole family of missiles is unworthy. The main complaints about the TV Maverick are that it cannot find a camouflaged tank if the target melds into green vegetation, and that it does not work in darkness or in low-visibility conditions. These accusations are true, but they do little more than define the limits of electro-optical technology. A black-and-white television sensor requires a reasonable amount of light and contrast to produce an imgage. As for tanks blending into the vegetation, that should not be much of a factor on a European battlefield, with armored vehicles moving by the thousands.

The inability of the TV Maverick to function in darkness or under conditions of poor contrast is more serious, and is a prime reason why the infrared system is needed.

The IR seeker in the nose of the AGM-65D senses minute differences in temperature. A vehicle that has not been operating for hours, or even a building, will give off enough heat for Maverick to spot. The tracker can lock onto objects either hotter or colder than their surroundings. A mechanical scanning system converts these infrared readings to a TV-like image on a screen in the cockpit of the launching aircraft. Darkness does not hamper the IR seeker. In fact, it may work even better after the sun goes down, since the temperature difference—and thus the IR signature—between a tank and the landscape is likely to be sharper.

NIGHT AND WEATHER

"The IR Maverick is a major new factor in nighttime fighting," says Lt. Gen. Thomas H. McMullen, Commander of the Aeronautical Systems Division. "We know we're going to have to fight at night. The enemy is going to fight at night. We cannot afford the penalty of operating only during the daytime and in VFR conditions, because in Europe that would sometimes keep the Air Force out of the game for extended times. In fact, in the winter it would leave us out, on the average, twenty hours each day."

The AGM-65D is now billed as having a "limited adverse weather" capability, which GAO notes is a change from the previous wording of "adverse weather." The extent to which foul weather degrades the IR Maverick's performance has been a major point with some of its critics.

"The majority of the DT&E and IOTE tests we ran were in humidity conditions representative of European winter or European summer," says Col. Thomas R. Ferguson, Maverick program director at the Aeronautical Systems Division. "In all of those cases, we found that the missile performed satisfactorily. We do not see the humidity conditions you could expect to see in Europe as having any kind of operational impact on the missile. The effect of very high humidity is that you have to drive in a little closer to the target. It doesn't mean the missile is not effective.

"As far as heavy rain is concerned—yeah, it's a limitation. But it's not a Maverick limitation—it's a limitation that you have in any kind of a target acquisition system that uses an IR signature. You're going to have degraded performance in any kind of condition that knocks down the signal, and obviously heavy rain is a very bad condition. You have the same situation in heavy fog or a very heavy snowstorm. On the other hand, there will also be some conditions of rain, fog, and snow where the missile will be effective."

Given all this, General Skantze says that "in the central region of Europe, the IR Maverick triples the amount of time you have available to use your aircraft effectively against armored vehicles."

OPERATIONAL CONCEPT

IR Maverick can acquire targets in a variety of ways. It can be cued, for example, by the Pave Tack infrared sensor or the electronic sensor of the Wild Weasel defense suppression system. Compatibility with these systems was proved during operational testing.

"The predominant method of attack, however—certainly predominant if you're talking about the A-10—begins with pilot prebriefings of targets in a pilot's normal area of attack, an area he's already familiar with," says Colonel Ferguson, the Maverick program director. "Intelligence sources are going to say there are armored vehicles in such and such a location. Prebriefed, the pilot goes in to his initial point, heads to the target area, uses the Maverick to look, and if he has targets in the kinds of formations he would expect to see, he can assume that's his target.

"A critical assumption here is that you're going to be operating in a very target-rich environment. The misconception, I think, has been that the pilot will be operating against very few targets in areas for which he will not have very much familiarity, and not knowing where the target is, he will have to use Maverick to search a fairly wide area to find his target. That is not the operational scenario as we see it."

The method of attack—and the choice of weapon, for that matter—depends on the situation. The missile and the gun complement each other.

"If you can get close enough, then you might as well shoot 'em in the eyes with the gun," says Maj. Nick Nicolai, a pilot with more than 1,100 hours in the A-10 and who flew many of the IR Maverick tests. "The gun is cheaper, and it's more reliable. In cases where you have friendly troops in extremely close contact with the enemy, you probably wouldn't use an IR Maverick except in a dire emergency. There are minimum distances established for all weapons in our inventory.

"I think the IR Maverick is great—but it's not always great. Just like the TV Maverick and the gun are sometimes good and sometimes not good. I have to take a given situation on a given day, with given weather constraints, the way I feel, the way the airplane has been performing, what the enemy has been doing. Then I dig into my bag of tricks and apply the ones that I need to defeat a target and survive. Tactical flexibility is the key to my survival."

QUALITY OF THE IMAGE

The pilot will have a great deal of information in addition to what he can see on his cockpit screen, but the quality of the image on that screen has been central to much of the criticism of IR Maverick. Variously, it has been charged that all a pilot can see on his display is "a bunch of bright spots," that he cannot pick a valid target out from thermal clutter on the battlefield, that the sensor's narrow field of view is like "looking at the world through a drinking straw," and that Maverick cannot tell an enemy tank from a friendly one.

In a series of videotapes of Maverick engagements shown to Air Force Magazine, even an untrained eye could distinguish tanks at a considerable range, and fine details became clear as the sensor moved closer in. An experienced pilot can, of course, read much more from those images. Program officials are taken aback by the "bright spots" accusation, because the picture on the screen is pretty good.

The Air Force says that in IR Maverick operational testing, pilots found they were able to lock onto armored vehicle targets with a high degree of confidence. They had no difficulty in sorting out armored vehicles from other vehicles. Nor were they confused by burning hulks or such thermal clutter as burning oil barrels set out on the range. Even in earlier testing, the missile's breaking lock after acquisition—a problem since fixed—was more of a concern than its locking onto objects other than valid targets.

Last year, Dr. Alton G. Keel, Jr., Assistant Secretary of the Air Force for Research, Development and Logistics, told Congress that in operational testing the IR Maverick had demonstrated a sixty to eighty percent probability of acquiring a valid target.

The IR Maverick has a three-degree angle of view, which can be focused down to one and a half degrees for better resolution. While this does not provide a panoramic view, three degrees takes in a fair amount of real estate when the angle begins spreading out from a standoff distance. An ample stretch of the target area was visible on the tapes shown to this magazine.

"In tests at Fort Riley, we saw columns of tanks with at least nine vehicles in the line of attack," says Major Nicolai.

The pilot will seldom be patrolling a broad area with nothing but the Maverick seeker

to point him toward the target. Most of the time, intelligence sources, forward air controllers, and various cuing aids will have gotten him in the proper vicinity. The standoff acquisition range and the desired field of view depend on the circumstances.

"If tanks are rolling across sand or dirt or something, or if there's been a battle going on and I can see smoke and flames, I might visually acquire the target ten miles away," says Major Nicolai. "Whatever the situation, I'd want to do as much as I could to identify the target with the IR Maverick's larger field of view. At some point, I want more information on the target, and I have the option to change the field of view to give me more resolution."

Neither the IR Maverick nor any device in existence can distinguish an enemy tank from a friendly one at any reasonable standoff range. Target selection is the pilot's responsibility.

"When I squeeze the pickle button to release the IR Maverick, I've made sure to the best of my ability that this is an enemy target," says Major Nicolai. "I wouldn't squeeze the trigger if I had not been able to make that definition.

"There are a lot of parameters you look at besides the features of the tanks: where they are pointed, where they are in respect to each other. I think you can tell as well with the IR Maverick as you can with any other weapon—or with your eyeballs in most cases. It takes a guy who's very knowledgeable to tell the difference in two tanks sitting out there, but most of the fighter pilots, the attack guys, are that knowledgeable. You could reasonably expect to define Soviet armor vs. friendly."

WERE THE TESTS TOO EASY

"We find that it has been demonstrated that the IR Maverick had limited success when operating under relatively benign test conditions," last year's GAO report charged. "On the other hand, we find that it is not known whether the IR Maverick can work well under less-than-favorable test conditions, as may happen in combat."

The main shortcomings cited by GAO were that the pilots quickly became familiar with the test ranges and visual landmarks because they flew repeated missions in the same small areas, that target briefings had told them what to look for, that "potentially serious operational constraints were omitted from the testing," and that the environment did not adequately simulate a battlefield.

The Air Force does not regard these criticisms as valid. Pilots do learn a test range after awhile, but during wartime they would also be flying repeated missions in the same areas of attack, and they would have substantial knowledge of those areas ahead of time. Certainly, they would have been briefed in detail on targets and cues to watch for.

The test ranges are relatively small because the areas available for live firing of ordnance are limited. This was partially compensated for by vectoring aircraft in from longer distances and from varying orientations. The lengthy test program included not only launches but also hundreds of hours with the missile in airborne captive carry—during which much larger test areas were used and in which target acquisitions were run.

Early developmental tests—on which the bulk of the GAO commentary was based—were designed to test specific attributes of the system. Complexity and operational realism increased as the program moved toward full-scale development and operational testing.

Launch velocities and altitudes were consistent with the battle tactics of the five types of aircraft—F-4s, A-10s, A-7s, F-16s, and F-111s—that flew the tests. "Environmental test conditions ranged from hot and humid at Eglin AFB, Fla., to snow background at Fort Drum, N.Y.," the Air Force says. "Realistic battlefield clutter such as disabled vehicles and burning hulks, countermeasures, as well as smoke camouflage were used to simulate expected conditions."

RELIABILITY AND MAINTAINABILITY

Two major reliability and maintainability standards were set for the IR Maverick. It has already met one of them, demonstrating a thirty-six-hour mean time between failures.

The other is more elusive. The requirement is that the missile have an eighty-five percent probability of working properly after fourteen hours in captive carry. So far, the test results have fallen short of that. Program officials say the standard would work out to a mean time between maintenance of eighty-six hours which may be unreasonable to expect. The TV Maverick, a mature system on which reliability has been good, averages only sixty-six hours between maintenance.

"I think a mistake we made was to establish a threshold for reliability and maintainability that was based on the current TV Mavericks out in the field," General Skantze says. "That system has a degree of maturity that we're not at yet with the IR. I don't see any reason to change the standard at this point. I think a lot of people recognize that it's a mature standard. We're going to get as close to it as we can. The trend data's there that says we are now moving up the curve."

ALTERNATIVES

There has been some suggestion that the Air Force cancel IR Maverick and go instead with the AGM-65E laser-guided Maverick, which is being built for the Marine Corps. That missile has a blast/fragmentation warhead, more powerful than the shaped-charge warhead in the TV and IR versions. Accuracy of the laser Maverick in operational evaluation tests has been sensational—fifteen hits in fifteen shots.

The Air Force was once in the laser Maverick program, and is still acquiring it for the Marines, but plans to buy more for itself. The main problem is that the AGM-65E requires a designator, either on the ground or airborne, to continue playing a laser beam on the target up until the missile impacts. The Air Force wants a weapon that it can launch and leave.

Looking ahead—beyond electro-optical, laser, and infrared technology—the next generation of antitank weapons will possibly employ millimeter wavelength radar. That could overcome some of the limitations of the older technologies, but millimeter wave weapons are still several years into the future. The Soviet and Warsaw Pact armored threat to Europe is in place now.

The Air Force sincerely believes the IR Maverick is a good system, and wants the capability it can add for operating against armor at night and under the weather.

It is not a perfect weapon, but much of the criticism made against it appears ill-founded. Nothing else that might do the job better is in sight.●

JOBS TAX CREDITS

● Mr. SASSER. Mr. President, last week the Senate Committee on Small Business heard from the leaders of a variety of small business groups about their legislative priorities for the 98th Congress. A top priority among many of those who came before the committee was the expanded use of a jobs tax credit. These men and women rightly saw such tax credits as a viable means of helping our Nation's small businesses grow and prosper.

The significance of jobs tax credits was further heralded in the March issue of Nation's Business. An article in that issue titled "What Small Business Wants From Congress" stresses the vital role jobs tax credits can play in generating new employment. As was pointed out in the article, a jobs tax credit "is the fastest, least intrusive mechanism to stimulate employment."

On February 1, I, along with Senators NUNN, HUDDLESTON, LEVIN, JOHNSTON, and PRESSLER, introduced S. 371, the targeted Jobs Tax Credit Amendments Act of 1983. This bill provides the type of assistance that these small business leaders and economists are asking for. It expands the possible use of jobs tax credits for all employers and contains provisions that are particularly attractive to small businesses.

Since the introduction of this measure I have been contacted by small firms in New Jersey, Florida, and other States, expressing an interest in this legislation. These business leaders have told me how their firms utilize this type of jobs tax credit and that they welcome the type of work we are doing in S. 371.

What all of these small business owners and operators recognize is that jobs tax credits such as S. 371 stimulate hiring. We have seen some indications that at long last economic recovery may be underway. Many small firms are approaching the point that they are again thinking about hiring. S. 371 acts as a catalyst to such employment planning. This point was also touched on in the Nation's Business article as Joel Popkin, an economist specializing in small business, pointed out "If I can use half a worker now and a whole one by year-end when business has improved, then with a tax credit, I can afford to hire that worker now instead of waiting." Thus, S. 371 can work to sustain and even further our burgeoning economic recovery.

Mr. President, I think my colleagues would benefit from reading the entire text of "What Small Business Wants From Congress." After absorbing what this article has to say, it is clear that S. 371 addresses the concerns of our small businesses and warrants expeditious action by this body. I ask that "What Small Business Wants From Congress" contained in the March

issue of Nation's Business be printed in the RECORD at this point.

The article follows:

WHAT SMALL BUSINESS WANTS FROM CONGRESS

(By Susan J. Duncan)

Small business people are looking to Washington this year for action that will help hold interest rates down and bring demand for their products and services up.

They think the first objective can be reached by slashing federal deficits and the second by increasing employment—thereby putting more money in consumers' pockets.

High interest rates and weak sales combined to make 1982 the worst post-Depression year yet for small businesses. Annual business failures, as reported by Dun & Bradstreet, increased nearly 49 percent, following a 1981 increase of 45 percent.

Almost half of the failing businesses had liabilities of less than $100,000. Dun & Bradstreet covers only terminations with losses to creditors. One estimate is that, for each of D&B's 25,346 recorded failures in 1982, 6 to 10 other businesses simply paid their bills and closed their doors.

Today, interest rates are still high, but they have dropped to bearable levels for many smaller companies.

Unlike large corporations, which have access to long-term debt or equity markets, small firms rely primarily on banks for their financing. They typically obtain loans at rates several points above the prime. When the prime hovered in the high teens and above, many small businesses could not afford to borrow. Economists found a 74 percent correlation between the level of the prime rate and the number of business failures.

With current prime rates of 11 to 13 percent, "small business can begin to borrow again," says John Sloan, president of Nashville's First Tennessee Bank, whose principal customers are small business owners.

Says Margaret Hansson, who founded a baby-products company and is now a small business consultant and investor in Boulder, Colo.: "Since interest rates have let up, you're seeing smiles on those of us who need to finance inventories or receivables."

However, small companies with markets abroad continue to cite high interest rates as their No. 1 problem. Because interest rates are higher in the United States than in other countries, investors have been exchanging other currencies for dollars. This demand for the dollar has driven up its value relative to the other currencies. Consequently, the price of foreign goods sold in the United States has gone down and the price of American goods sold abroad has gone up.

Shaw Mudge, whose Stamford, Conn., company makes fragrances bought by multinational manufacturers of shampoos, deodorants and other consumer products, complains:

"The strong dollar is destroying us overseas. We've had to slash prices to hold our business. For the first time in its history, the cosmetics industry is feeling a depression—and interest rates did it. They've got to come down to around 8 percent."

In the meantime, Mudge, who also chairs the Senate Small Business Committee's National Advisory Council, has dramatically altered his customer "mix"—from a few multinationals to dozens of smaller companies. "The multinationals have all turned into bankers," he snorts. "They can make more in money-market funds than they can launching new products."

Even those small firms with primarily domestic sales fear that interest rates may turn upward again as federal deficits intensify government competition in the credit markets.

Sixty-one percent of respondents to a survey by the U.S. Chamber of Commerce Small Business Center last spring identified federal deficits as one reason interest rates have not fallen as fast or as far as the inflation rate. Fifty-six percent also blamed Federal Reserve policy.

The Fed has since loosened its grip on the money supply—"Chicago banks have plenty of money to lend," says James Kackley, partner in charge of the small business division in the Chicago office of Arthur Andersen & Company, the accounting firm—but the deficit looms larger than ever. "It's the big risk factor," explains John Sloan, the Nashville banker. "The deficit could definitely wreak havoc with interest rates."

Van Smith speaks for many small business owners when he insists that if the deficit pushes interest rates up again, "Congress will have been the cause."

Smith, chairman and president of the Ontario Corporation in Muncie, Ind., and chairman of the U.S. Chamber's Council of Small Business, notes that "many small companies have taken desperate actions to hang on, cutting their margins to the bone. We want to see Congress do the same. We're frightfully disappointed by the lack of congressional courage to cut spending. Reagan wants to do it, but Congress is a quagmire of indecision."

But for now, with interest rates down at least for a while, depressed demand for their products and services is a bigger worry for most small businesses. In a survey of 1,000 business owners with 10 or fewer employes, conducted last August by Safeguard Business Systems, Inc., and the Institute for Constructive Capitalism, only 25 percent of respondents identified the cost or availability of money as their single most important business problem. That compared with 42 percent who mentioned either the economy in general or low demand in particular.

Kackley of Arthur Andersen & Company observes that sales slumps among some of his clients have them scrambling for new business and urging existing customers to increase their orders.

Helen Leslie, president of K&W Supply House, Inc., in St. Petersburg, Fla., sells heating and air-conditioning supplies to the homebuilding industry. She reports not only a significant sales decline last year but also bankruptcies among some of her customers.

Small and large companies alike agree that one way to stimulate demand is to get more consumers back to work—and small business generates the majority of American jobs. One study conducted at the Massachusetts Institute of Technology concluded that as many as 87 percent of all new jobs are created by small businesses, with 66 percent created by companies with fewer than 20 employes. Small companies tend to be far more labor-intensive than larger ones; according to one estimate, three-fourths of the work force is employed by small business.

Many small business advocates support enactment of a temporary general jobs tax credit, similar to one that existed in 1977-78. During that period, any company that increased its employment by at least 2 percent from year to year received a maximum credit against its income tax of $2,100 for each new hire, up to an annual ceiling of $100,000.

There is wide support for a credit that would be available only to small business and would recognize that many small companies, particularly new ones, operate at a loss. An income tax credit benefits only companies with net incomes. Frank Swain, chief counsel for advocacy at the Small Business Administration, suggests that the credit could be applied against payroll taxes, so that any small enterprise, whether profitable or not, could benefit.

An alternative, contained in a bill introduced in the last Congress by Sen. Lowell Weicker (R-Conn.), chairman of the Small Business Committee, would provide refunds to nonprofitable companies, in lieu of credits. Weicker's bill, to be reintroduced this year, would also restrict credits to new hires who were previously unemployed, an idea reportedly favored by the Reagan administration.

Because it would reduce revenue, any kind of tax credit faces an uphill battle in Congress. "We don't want to reward hiring that would have occurred anyway," comments Robert Dotchin, staff director of the Senate Small Business Committee, echoing a common criticism of the 1977-78 credit.

That kind of thinking misses the point, according to Swain, and indicates that "Congress has not heard the small business story on this issue." The credit is not intended to create new positions; rather, it is designed to speed up reemployment. Joel Popkin, an economist who specializes in small business issues, explains: "If I can use half a worker now and a whole one by year-end when business has improved, then with a tax credit, I can afford to hire that worker today instead of waiting."

A jobs tax credit would complement the investment tax credit, Swain contends. The latter aids asset-intensive companies, primarily big business, whereas the former would aid the labor-intensive small business sector.

In addition, as Shaw Mudge points out, credits offset the costs of training younger employes and retraining displaced adult workers (those who come from collapsing industries). Mudge, who currently has 45 employes, hired nine people while the original credit was in effect.

Finally, most economists prefer tax credits to public-works programs or training subsidies, both of which are generally more expensive and require longer lead times. "The tax credit is the fastest, least intrusive mechanism to stimulate employment," says Swain. "And there's no downside. If it doesn't work—if nobody hires—it doesn't cost a thing. The worst that could happen is that it could succeed!"

A second proposal to spur small-business employment is a subminimum wage for youngsters. The small business sector is the primary employer of the unskilled, high-unemployment groups—minorities, homemakers, the elderly and teen-agers. SBA reports that small business provides two-thirds of all initial work experience.

Like the job tax credit, a youth differential is being considered by the Reagan administration. But even with presidential backing, a subminimum wage will likely encounter even stiffer congressional opposition than a jobs credit. Labor groups fear the differential would be used to "downgrade" existing adult positions. Small business disagrees, arguing that a subminimum

wage would expand entry-level, unskilled employment.

Says Louis Laborde, co-owner of Community Paint & Hardware, of Bethesda, Md.: "I don't think a subminimum wage would help me out as much as it would help the kids. It's difficult for small businesses to hire someone with no experience." Laborde's small store employs 17 people.

"I'd use a youth wage," says Helen Leslie of K & W Supply House. "I've got some part-time maintenance jobs, like yard work, cleaning and sweeping, that just don't get done now because I can't afford to pay the minimum."

Unfortunately, before small business groups can concentrate on legislative proposals to boost employment, they must focus on proposals that would deter it. Heading this list is the bipartisan plan to raise payroll taxes to shore up the Social Security system.

"How can we have any confidence in a solution predicated on tax increases," asks Ivan Elmer, manager of the U.S. Chamber's Small Business Center, "when we look at the failure record of that solution? The maximum annual tax per employee has increased more than 600 percent since 1970 and we're further away from a solution than ever."

Most small business owners would like to see Social Security restored to its original concept as a supplement to other retirement income. They would also like to see the system become what accountants call "actuarially sound"—that is, an individual's benefits would be tied to his or her contributions, plus interest.

According to the Employee Benefit Research Institute, the average wage earner retiring today contributed about $12,000, which will be returned in benefits in about 16 months. This worker can expect to receive total benefits of about $125,000—representing a 1,000 percent "return on investment." With that rate of return, it is easy to see why the system is going broke.

"It may sound self-serving," says small business consultant Margaret Hansson, "but the best approach to reducing the deficit is to nurture those who create the jobs. So you've got to look very carefully at any tax increases that will affect small businesses."

SBA did exactly that two months ago in a report that it titled: "Social Security: a Tax on Labor." The report confirms that small businesses are less able than large businesses to shift payroll taxes to consumers (through higher prices) or to employes (through lower wages).

In addition, small firms pay more Social Security taxes per dollar of wages. At present, only the first $35,700 of an employe's wages is taxed—at a combined (employer/employe) rate of 13.4 percent. Most small business employes earn less than this amount. Because larger firms pay 34 percent higher wages on average, their effective tax rate is lower. For example, the effective tax rate for an employe earning $50,000 is only a combined 9.6 percent.

All these factors add up to a heavier burden for small business whenever payroll taxes are raised. Adopting this particular Social Security reform "will make an already difficult economic climate that much more hostile to job-creating small firms," the SBA report concludes.

Despite all the uncertainties of today's economic climate, the small business sector is basically optimistic about its future (see the article on the Heller/Roper Small Business Barometer, page 30).

Indeed, some say entrepreneurs thrive on uncertainty. Van Smith agrees with many economists who see American industry undergoing a radical tranformation, from an industrial age to an information age.

"The entrepreneur can leverage his or her ideas much more readily now than in a period of business stability," says Smith. "The opportunity and environment for innovation have never been better."

Even in declining industries, the entrepreneur can still carve out successful sales niches. For instance, "even though most auto dealers and suppliers did not fare well last year," says Arthur Anderson's Kackley, "I've got one client who is doing very nicely manufacturing plastics for auto exteriors. This is a relatively new market where demand is strong."

And Rowena Wyant, vice president of Dun & Bradstreet's business economics division in New York, notes an intriguing countertrend to the rash of business failures: Many of today's small business start-ups represent the brainstorms of people who were unable to find jobs.●

HOW THE TAX EQUITY AND FISCAL RESPONSIBILITY ACT WORKS

● Mr. DOMENICI. Mr. President, there is a great deal of confusion and frustration in my State because of the tip-reporting provision in the Tax Equity and Fiscal Responsibility Act. I have had meetings with many waitresses in New Mexico. Some were working 40 hours only to receive a $3 paycheck. It is clear that the law is not being properly or uniformly applied. I regret that there have been misunderstandings and I feel a strong responsibility as a U.S. Senator to be responsive to this matter.

In my part of the country, many of the waitresses are working mothers who work the 6 a.m. shift. They are on the go the entire time they are working. It is physically demanding to keep moving for 8 straight hours. It is mentally exhausting to satisfy the wishes and wants of every single person who sits down for a meal.

In rural New Mexico, a dollar is considered a generous tip. This falls short of the allocated tip target of 8 percent.

We are almost upon the April 1 effective date for the withholding on tips provision, and there is still a lot of confusion on how the law is supposed to work. I think it is inexcusable that more effort was not made at the national level to explain the law to the people most affected—the waitresses and waiters who work so hard.

I have had discussions with the IRS and I have collected all of the available information on this subject. I wish to have printed in the RECORD an explanation of how this provision is supposed to work:

The explanation referred to follows:

TAX INFORMATION USEFUL TO TIPPED EMPLOYEES

To best understand the changes the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) made it is helpful to understand what the law was before TEFRA.

Tips are income and income tax is due on all tips regardless of whether they are charged or left on the table.

Tips must be reported to your employer on or before the 10th day following the month you receive them. The employer is supposed to withhold income, FICA and FUTA taxes due. The new law does not change this.

Your employer will withhold on the amount of tips you report. This is important for you, the owner and bookkeeper to understand.

You are required to keep good records on the tips you receive. Your daily record should show your employer's name, the month, year and the daily amount of tips you receive and any tip-splitting. The IRS has a Form 4070A which is a good way to keep your records. (Copy attached)

The new law does not change your record keeping responsibilities. Good records are more important under the new law, especially if your tips don't equal 8 percent of the gross receipts of the restaurant or bar where you work.

If you haven't been keeping records you should start.

The new law changes how restaurants and bars with ten or more employees are required to file reports on their employees' tips.

Under the new law the IRS requires "information reporting." These new requirements are just what their name suggest—information only.

The new "information reporting" does not increase the tax on tips.

One new information reporting requirement is that each restaurant or bar must report once a year their gross receipts, other than carryout sales and mandatory 10 percent or greater service charge sales; total charge receipts; total tips shown on those charge receipts and total amount of tips reported by the tipped help.

For the first quarter of 1983 only (January 1 through March 31) employers are required to file information returns that include a list of all tipped employees and their reported tip income.

Another information reporting requirement deals with allocated tips.

Allocated tips is more information for the IRS. It has nothing to do with how much tax you owe. Allocated tips is the amount equal to the difference between 8 percent of gross receipts and the amount reported by the employees for the year.

If the amount you reported as tips adds up to 8 percent or more of the gross receipts, the "allocated tip" line on your W-2 will not have a tip allocation figure.

If you did not report tips equaling 8 percent or gross receipts then your employer must do more information reporting and include "allocated tips" in the space provided on your W-2. This figure is purely information and does not reflect how much tax you owe.

The IRS recognizes that some restaurants have customers who don't tip 8 percent. If a restaurant or bar can show the IRS that the average tip is less than 8 percent, then the employer can allocate tips based on a lower figure of not lower than 5 percent.

Example: A single taxpayer working 40 hours a week at $2.05 an hour in wages and $2 an hour in tips has an annual income of $8,424. The tax on this would be $765. If withholding is only taken from wages, the taxpayer would owe $379 in federal taxes on

April 15. With withholding on the tips there is a reduction in taxable home pay of $12.80 a week, the taxpayer would actually receive a refund of $287.

To be honest, I realize that paychecks may be smaller because the withholding provisions will be more comprehensively applied. However, there is some flexibility. For example, if you received a tax refund or did not owe taxes last year and do not expect to owe taxes this year, you can be exempt for the withholding provisions. To qualify, you give your employer a W-4, "Employee's Withholding Allowance Certificate." This will entitle you to receive more money in each paycheck rather than a refund at the end of the year.

Further, exemptions are provided for the following individuals: Single persons with adjusted gross income of $3,300 or less; a couple with no dependents and adjusted gross income of $5,400 or less; a household with one dependent and adjusted gross income of $4,300 or less; and a household with two dependents and adjusted gross income of $5,300 or less.

TAX INFORMATION USEFUL TO RESTAURANT OWNERS

Step 1: Determine whether the new rules apply to your business: The new rules only apply to "large food or beverage establishments" where tipping is customary and who employ the equivalent of 10 full-time employees.

Step 2. Gather the information to be reported: The following information will be needed:

(1) Gross receipts (other than nonallocable receipts explained below);

(2) Amount of charge receipts (other than nonallocable receipts) that have charged tips;

(3) Amount of tips included in item No. 2;

(4) Amount of tips reported to you during the calendar year by employees;

(5) Employee's share of mandatory service charges of less than 10 percent that are treated as wages for withholding tax purposes; and

(6) The name, social security number, and the amount of tips allocated to each employee who received an allocation during the calendar year (See Tip Allocation explained in Step 5).

Step 3: Determine receipts to be reported to the IRS for each establishment: You need to know what your gross receipts are for reporting purposes. This is not the same as gross receipts for other purposes.

Gross receipts for tip-reporting include:

Cash sales;

Charge receipts, such as credit card charges, and charges under any other credit arrangement;

Charges to a hotel room (excluding tips if the employer's accounting procedures allow these tips to be segregated);

Retail value of complimentary food or beverages served to customers; and

In the case of resorts or package deals include a good faith estimate, including a reasonable profit, of the portion of food or beverages that are provided along with other goods or services.

Nonallocable receipts (Items deducted from gross receipts) are:

Carryout sales;

Sales on which a 10 percent or more sales service charge has been added;

Tips reported on charge sales where employees do not receive cash from the employer for the amount of such tips; and

State or local taxes.

Step 4: Determine whether enough tips have been reported to avoid allocation:

Remember, allocation does not mean withholding. Allocation is simply information for the IRS. It does not affect an employee's tax liability. Withholding is based on the tips employees voluntarily report to you. Allocation is not necessary if employees report tips that equal at least 8 percent of gross receipts. The employee's reported tips must be included on their W-2 forms at the end of the year.

Employers who believe that the actual percentage of gross receipts constituting tips is below 8 percent can request that the IRS lower the rate, but not below 5 percent. The request should be made to the Director of the IRS in the area where the establishment is located. The rate can be reduced to a percentage that the District Director determines to be the best estimate of the actual percentage of gross receipts constituting tips.

Step 5: Allocate tips if employees haven't reported 8 percent (or lower percentage);

(1) Multiply gross receipts (GR) by the percentage (P), which is usually 8 percent (this can be reduced with permission but not below 5 percent), to produce the amount of tips required to be reported (T).

$$GR \times P = T$$

(2) Determine the amount of tips reported for the payroll period by indirectly-tipped employees (I).

(3) Subtract indirect tips reported (I) from the amount of tips required to be reported (T). The excess is the directly-tipped employees' share of allocable tips (D).

$$T - I = D$$

(4) For each directly-tipped employee, multiply the amount determined under No. 3 by the gross receipts directly allocated to each employee (GRE) over the total gross receipts (GR) to determine each employee's share of 8 percent of the gross receipts (ES).

$$D \times \frac{GRE}{GR} = ES$$

GRE may be determined either by direct method (for example, the sum of all receipts that have an employee's name on the check) or by the number of hours the employee worked divided by the total number of hours worked by all directly tipped employees.

(5) Subtract the amount of tips reported by the employee for the payroll period (R) from appropriate share of 8 percent of gross receipts (ES) to determine each employee shortfall (S).

$$ES - R = S$$

(6) Subtract the amount of tips reported by all directly and indirectly-tipped employees (TR) from the amount of tips required to be reported (T) to determine the amount to be allocated (A).

$$T - TR = A$$

(7) For each directly-tipped employee with a shortfall for the payroll period, multiply the amount determined under No. 6 by a fraction (the numerator is the amount of the employee's shortfall (S) determined in No. 5 and the denominator is the total shortfall for all directly-tipped employees (TS)). The product is each employee's allocation for the payroll period (EA) that must be reported on the employee's W-2.

$$A \times \frac{S}{TS} = EA$$

Allocation does not affect withholding. It does not have any impact on employees' paychecks or their tax liability. This is very important for you and the employee's to understand.

For 1983 only, tip allocation is not required for payroll periods before April 1. The only information required for the first quarter (January-March) of 1983 is the following:

Qualifying gross receipts, charge sales included in gross receipts and tips reported to the employer for the period, service charges of less than ten percent which the employer is required to include in the employee's income, and each tipped employee's name, social security number, wages, and reported tips.

For the last three quarters of 1983 and annually from them on, you must report only the names and social security numbers of employees to whom a tip allocation was made by attaching photocopies of the employees' W-2 forms to the 8027 forms you file.

Step 6: Report Information to the IRS. The specific filing requirements include:

Form: Form 8027 with the transmittal Form 8027T.

Due Date: On or before the last day of February of the year following the calendar year. For calendar year 1983, the Form 8027 will be due on February 29, 1984.

Where to File: IRS Service Center where you normally file your withholding tax information.

Special Filings: A special rule requires additional reporting for the first quarter of 1983. See step 5 above. This information will be used to study tip compliance.

At this point, I should point out that I am not a specialist in tax law or an official spokesman for the IRS. I encourage people with questions to contact their local IRS offices.●

THE INVOLVEMENT OF CPUSA IN THE NUCLEAR FREEZE MOVEMENT

● Mr. DENTON. Mr. President, many of my colleagues are concerned about allegations of Communist participation in the so-called nuclear freeze or peace movement, and about alleged Soviet efforts to influence or control it. I certainly understand their concerns, which I share. There is no question that most of the Americans who participate in freeze activities are well meaning and motivated by concerns that we all share and understand. They would be dismayed were they to believe that outsiders had taken advantage of their good intentions.

I believe most of my colleagues now agree that the Soviet Union is very interested in developments in the nuclear freeze movement in the United States. They are also probably aware that the Communist Party of the USA (CPUSA) is closely alined with the Soviet Communist Party.

Those who are concerned about the issue may be interested in several articles that have appeared in the Daily World, the successor to the Daily Worker as the official newspaper of the CPUSA.

In the Daily World of June 17, 1982, Gus Hall, the general secretary of the CPUSA, wrote about the party's participation in demonstrations in this country.

On January 4, 1983, Bruce Kimmel, a member of the CPUSA, wrote in the Daily World about the active involvement of members of the CPUSA in what he called literally hundreds of local peace organizations. This article was subsequently reprinted in the Wall Street Journal.

Finally, an article by Mike Davidow in the Daily World for December 7, 1982, coincidentally the 41st anniversary of the attack on Pearl Harbor, described a visit to the Soviet Union by a delegation from the U.S. Peace Council.

Mr. President, I ask that the texts of the three articles be printed in the RECORD immediately following my remarks.

The articles follow:

[From the Daily World, June 17, 1982]

THE MEANING OF JUNE 12

(By Gus Hall)

More than a million marched in New York City, 100,000 in Los Angeles, 50,000 in San Francisco, 40,000 in Denver, 15,000 in Seattle and tens of thousands in other cities all across our land.

Marching and speaking for the U.S. peace majority, these demonstrators took to the streets to demand peace and disarmament, to focus the main fire against the domestic and foreign policies of the Reagan Administration.

For every marcher there were 25 who could not march for many reasons. These protesters represented and reflected the real sentiments and needs of the great majority of our people.

This mass outpouring, this mass explosion is a reflection of the fact that both quantitatively and qualitatively the struggle for peace has now reached a new plateau.

Even more important is the fact that this majority sentiment has now crystallized into thousands of coalitions in every city, state and community, both urban and farm. It is a reflection of the deep desire for peace. But it is much more.

It is the growing mood of anger against the over-all policies of the Reagan Administration, policies that are bankrupting our nation, creating mass poverty and joblessness, while stuffing the coffers of the corporations and the very rich. It is a mass upsurge against the Reaganomic war against the people, against the policies of nuclear first strike and limited nuclear war that are moving our nation, and the world, toward the nuclear brink.

This organized crystallization into movements of protest and all people's fightback at the grass roots level is the best guarantee that the mass demonstrations were not one-shot explosions.

This mass crystallization is the best guarantee that the struggles will continue where it counts most—in the communities, wards and precincts of the politicians. The '82 elections will see the people's crystallization translated into votes that will oust all pro-Reaganites from office.

We are very proud of our Party's contributions both to the organization and mobilization of the marches for peace and disarmament throughout the country.

We are proud of our participation in these demonstrations. And we are especially happy and proud of our Party's contingent in the New York City demonstration, marching alongside the Young Workers Liberation League, which reflected our great multinational, multiracial working class—composed of men, women, children, seniors and youth from all walks of life, our contingent was a display of our new strength, our new confidence in the future of our Party, our class and people.

These explosive demonstrations assure that our country will never be the same again. They raise all struggles to a new level. They will be reflected not only in the White House, the halls of Congress and the streets of U.S. communities, but they will reverberate throughout the world.

[From the Daily World, Jan. 4, 1983]

I PLEAD GUILTY

(By Bruce Kimmel)

I confess.

As the representative of the Communist Party USA on the June 12 Coalition, I am in a position to say that the House Select Committee on Intelligence and the Wall Street Journal are correct: the Communist Party has played and continues to play an active role in the U.S. peace movement.

President Reagan's absurd charge that the U.S. peace movement is essentially a Soviet front forced the House Select Committee on Intelligence to hold hearings on the matter. The Committee issued a report in early December, called "Soviet Active Measures," which, among other things, notes that the Communist Party USA was actively involved in the historic June 12 demonstration. The report concludes that there is no evidence that the Soviet Union manipulated the coalition that organized the action.

This conclusion did not sit well with the Wall Street Journal. Anxious to aid Reagan's effort to generate another Cold War, the paper editorialized (Dec. 20) that the House report was seriously flawed because it did not recognize how alleged Soviet fronts, such as the Communist Party, "have been successful in shifting attention away from the Soviet Union's massive military buildup and toward the Reagan Administration's defense programs."

To prove this charge, the WSJ points out that there were no anti-Soviet signs, banners or chants at the June 12 demonstration. True enough. But what is interesting is that there were no rules prohibiting such signs, banners or chants. Organizations were free to use whatever slogans they wanted. The WSJ seems to be saying that the thousands of organizations which marched on June 12 were dupes of the Soviet Union.

But I must confess that I was among those who tried to get the June 12 Coalition to focus its demand on the Reagan Administration. I argued at a number of meetings that the military buildup of the Reagan Administration was bringing the world dangerously close to a nuclear holocaust.

Like others, I based my argument on the fact that the Soviet Union had endorsed the nuclear freeze, signed SALT II, called for a comprehensive test ban treaty, pledged not to be the first country to use nuclear weapons in a conflict, and urged the creation of nuclear free zones in different parts of the world, including Central Europe. I naturally pointed out that the Reagan Administration had not endorsed any of these disarmament proposals.

The Wall Street Journal assumes that only Communists or those manipulated by Communists would want to focus on the Reagan Administration. Actually, the decision of the June 12 coalition to focus on Reagan was determined at a two-day meeting at the end of last January. A resolution was adopted by several hundred national organizations which in essence said:

"While it is the responsibility of all governments to end the arms race, as residents of the U.S. it is our responsibility to alter the policies of the Reagan Administration." Although this remained the official position of the June 12 coalition, participating organizations were allowed to project whatever political demands they wanted.

The WSJ refuses to face the fact that peace activists in this country are scared out of their wits by the policies of their government and are working to change those policies. Rather than deal honestly with this uncomfortable fact, the WSJ attributes this sentiment to Communist manipulation and the naivete of U.S. peace activists, who are accused of working unwittingly in the interests of the Soviet Union.

This brings us to another WSJ charge: Communists in the peace movement are serving the interests of the Soviet Union.

Again I must confess. My Party's peace activities have indeed served the interests of the Soviet people—because their desire for peace is identical to that of the U.S. people. This is a strange charge. Is the WSJ suggesting that the Communist Party should be against peace because the Soviet Union is for peace?

Communist Party members are playing important roles in the peace movement. They argue among peace activists that the Reagan Administration, not the Soviet Union, threatens the survival of humanity. And they work in the interests of the Soviet Union by struggling for peace.

Also, Communists work to make the peace movement as broad as possible. They try to make sure it reflects the working class, multi-racial and multi-national character of the population. This may not serve the interests of the Reagan Administration, but it certainly serves the interests of the U.S. people.

Right now, Party members are active in literally hundreds of local peace organizations. The Communist Party USA—like Communist Parties around the world—has always been and will continue to be an active fighter in the struggle for peace. We confess.

[From the Daily World, Dec. 7, 1982]

U.S.-SOVIET PEACE ACTIVISTS MEET

(By Mike Davidow)

Moscow.—U.S. and Soviet peace activists, meeting here December 2, called for continuing actions against arms buildup and for working towards the friendship of both countries.

In an opening statement for the U.S. delegation, Mark Belkin, member of the executive committee of the U.S. Peace Council and director of the Department of Political Organization of the AFL-CIO of Iowa, said they were very impressed with the "yearning for peace of the Soviet people" which

was "consistent with the policies of the Soviet government."

"These impressions," he said, "have strengthened our determination to work for mutual friendship to the mutual benefit . . . of the U.S. and the Soviet Union."

A statement issued by the Soviet Peace Committee appealed to all peace-loving people, to all anti-war movements of the U.S., to struggle against plans to deploy the MX missiles, which would considerably increase the threat of a nuclear war. It called for actions December 1-15.

Tiola Hunter, Afro-American educator and member of the state legislature of Michigan, who introduced members of the delegation, stressed the disastrous impact of the nuclear arms race on the social needs of the people and on the economy. She pointed out that Michigan and particularly Detroit were hard hit by the Reagan Administration's belligerent foreign policy and Reaganomics.

INVOLVED IN UNITED ACTION

Frank Chapman, executive secretary of the National Alliance against Racist and Political Repression and a member of the executive committee of the U.S. Peace Council, noted the involvement of the U.S. Peace Council in the struggle against the MX missile and the deploying of Pershing 2 and cruise missiles in Western Europe.

Paul Dinter, a Catholic priest and leader of the Pax Christi of New York, told a press conference of Soviet news reporters at the headquarters of the Soviet Peace Committee that the Soviet peace movement "frankly puts most of us to shame by the grandness of its peace activity."

Dinter was a member of the executive committee of the coordinating committee for the June 12 demonstration for peace and human needs held in New York City last summer.

Earlier in a meeting with Yuri Zhukov, chairman of the Soviet Peace Committee and political commentator for Pravda, outlined the history, scope and activity of the mass Soviet peace movement. Zhukov noted that 80 million Soviet citizens annually make voluntary contributions to the work of the peace committees. "We do not get any money nor do we want any from the Soviet government. We are totally supported by the Soviet people."

The delegation included, Frank Clemente, national coordinator, National Campaign for Peace and Jobs; John Friend, member of the Committee of Jurists for Nuclear Policy, and Katherine Abel of National Public Radio.

Also Ann Marshand, director of Religious Center of Activity for Peace of Seattle; Ann Mitchell, member of the national leadership of Women's International League for Peace and Freedom from Philadelphia; and Susan Walter, head of the Campaign for Freezing Nuclear Arms of West Virginia. The delegation also visited Kiev, Simferopol and Yalta.

Chapman and Belkin were co-chairmen of the delegation.●

THE SALE OF PUBLIC LANDS

● Mr. BAUCUS. Mr. President, last summer, Interior Secretary James Watt unveiled a 5-year plan to sell what he called surplus public lands. I oppose Secretary Watt's proposed sale of some 35 million acres of public land.

Western States have always had a somewhat unique relationship with the Federal Government. In many States, Uncle Sam is the largest landowner. As such, he holds a controlling interest in their economic future.

It is for this reason that the sale of such a large amount of federally owned land is wrong. These 35 million acres equal an area roughtly the size of New England. This land contains rich coal deposits, oil and gas reserves, timber and grazing land.

How this land is developed will determine whether some States enjoy prosperity or hardship. Congress recognized this important fact in 1976 when it passed the Federal Land Policy and Management Act. Congress said public lands are a natural resource, one that must be maintained for all Americans.

Congress made clear its desire that the Federal Government manage and maintain a system of publically owned lands as a valuable national legacy.

No one disagrees that there are some federally owned properties that should be sold. Abandoned military installations and parcels of land in the hub of major cities are examples of the types of Federal holdings that should be sold. There also are numerous fragmented holdings that would be better off managed by State and local authorities or, in some cases, by private owners. The problem with Secretary Watt's proposal is that it is excessive.

To flood an already soft real estate market with such a massive amount of acreage would almost certainly lead to a depression in prices—for both public and private landholdings. Neither the Government nor private citizens would receive a fair market price for selling property.

Selling federally-owned grazing land also threatens the grazing rights of western ranchers. Few Montana ranchers are flush enough to buy up large parcels of land for grazing.

Finally, Secretary Watt's argument that this land sale would substantially reduce the Federal debt is faulty. His rosy estimate—that $17 billion would enter the Treasury—would barely scratch the surface. Sacrificing enormous parcels of land for only $17 billion hardly seems like a fair trade.

The Montana Legislature shares this view. On February 15, 1983, the Montana House of Representatives passed a resolution opposing the Watt Federal land sale proposal. Likewise, the Billings (Mont.) Gazette editorialized against the Secretary's plan.

I ask that the Montana State Legislature's resolution and the January 26, 1983, editorial from the Billings Gazette be printed in the RECORD.

HOUSE JOINT RESOLUTION NO. 12

A joint resolution of the Senate and the House of Representatives of the State of Montana opposing the Federal administration's plan to see public lands

Whereas, the Public Land Law Review Commission, in its 1964 public land study ordered by Congress, concluded that most public lands would not best serve the public interest if they were in private ownership; and

Whereas, the Federal Land Policy and Management Act of 1976 states and the National Forest Management Act of 1976 state that public lands will be retained in federal ownership; and

Whereas, the United States Secretary of Agriculture intends to propose legislation to the 98th Congress to expand his authority to sell National Forest System land; and

Whereas, the federal lands are a great national treasure and an important part of our heritage; and

Whereas, federal lands managed under multiple use represent a vast storehouse of publicly owned resources, such as fossil fuels, nonenergy minerals, rangeland, forests, wilderness, water, wildlife habitat, wildlife, fish, and many other valuable amenities and commodities; and

Whereas, these federal lands provide millions of hunters, fishermen, campers, picnickers, backpackers, snowmobilers, boaters, and recreational vehicle users a place to pursue recreational activities without encountering "no trespassing" signs; and

Whereas, retention of federal lands in federal ownership will promote access to the public lands and water for the maximum number of people for recreational and economic purposes; and

Whereas, federal lands are now available for use and enjoyment by all United States citizens; and

Whereas, public ownership of federal lands will ensure continued multiple-use management and public access to these lands; and

Whereas, since the sale of public lands could be made to the highest bidder, the result could be the elimination of the small rancher, timber operator, and other small commercial enterprises. Now, therefore, be it

Resolved by the Senate and the House of Representatives of the State of Montana:

(1) That public lands be retained in federal ownership except as provided in existing land-use planning statutes.

(2) That the 48th Legislature opposes legislation that the Federal Administration intends to propose which would permit the sale of National Forest System lands, excepting the sale of unmanageable, isolated parcels of land and financially burdensome, outdated, nonessential facilities.

(3) That the Secretary of State send copies of this resolution to the President of the United States and to each member of the United States Congress.

(4) That the Secretary of State send copies of this resolution to the presiding officers of the Legislatures of the states of Idaho, Wyoming, North Dakota, South Dakota, Washington, Oregon, Utah, Colorado, Nevada, New Mexico, and California.

"PRIVATIZATION" IS NO PANACEA FOR U.S.

"Those who cannot remember the past are condemned to repeat it," George Santayana wrote in 1906.

Our representatives in government might well keep Santayana's words in mind as they consider "privatization," the administration's plan to sell our public lands.

Back in 1803 Napoleon Bonaparte, in order to finance what would ultimately become his Waterloo, sold the United States a hugh parcel of land stretching from the Mississippi River to the Rocky Mountains—for $15 million.

And that figure included the settlement of some American claims against France.

And in 1867, the U.S. bought Alaska from Russia for some $7.2 million—less than two cents per acre.

At the time Russia was in the midst of a great expansionist fever, and it was believed that she and Britain were on the edge of war over India and Afghanistan.

And now President Ronald Reagan wants to sell an estimated 144 million acres of national land to help retire the national debt—a debt greatly affected by this country's defense spending.

France would certainly opt now for America's Midwest over Waterloo.

The U.S.S.R. certainly would prefer Alaska now to $7.2 million.

And 100 years from now, the United States may well wish that it had kept its public lands.

There are, of course, arguments in favor of privatization.

Proponents say that public lands would be better managed by the private sector where they would be subject to property tax and that they are an easy way to reduce the national debt—no increase in taxes, no cut in benefits.

But these arguments are shaky at best.

A few years ago when wheat prices jumped to $4 and $5 per bushel, some enterprising Montana farmers put the plow to public lands to increase their acreages. But the marginal prairie grasslands could not support wheat. With no root structure to hold the soil in place, it was carried away by the wind. If our public lands were made private, they would be subject to the pressures of the market place. That doesn't necessarily make for good management.

Some ranches are viable only because of the public lease lands. The staggering state of the agricultural economy would prohibit most ranchers from buying the land on which they depend.

And that would change the character of the West, family farms replaced by corporations with enough assets to tie up the public lands.

And that would further strap the states' economies. Family farms support local economies in many of the state's smaller communities. Large corporate farms would more likely buy directly from suppliers and borrow from larger lending institutions.

And finally, the sale of all these lands, particularly now in a time of sagging real estate prices, would not dent the national debt.

Total sales of the lands is estimated at $17 billion over the next five years. That figure represents .003 percent of the $100 trillion national debt. It has also been estimated that the loss of lease revenue from current federal holdings, particularly from mineral resources, will cost the government some $1 trillion in the future, much more than the sale of land would take in.

There is another point that Montana sportsmen might keep in mind. Non-fee hunting and fishing areas are fast becoming scarce in the West. The future of those revenue-producing sports may well depend in the future on public lands.

Privitization will be popular in the Eastern states, which have little to lose under the proposal.

But the Western states will suffer greatly if the administration's plan is put into effect.●

THE JAYCEE RATTLESNAKE ROUNDUP

● Mr. TOWER. Mr. President, on March 10, Sweetwater, Tex., will host the 25th anniversary of a special event, unique to west Texas—the Jaycee Rattlesnake Roundup.

Since 1958, the Sweetwater Jaycees have sponsored the roundup, with all proceeds going to benefit the residents of Sweetwater's Sunshine Inn, an activity center for the handicapped and disadvantaged which is operated and funded by the Sweetwater Jaycees. The rattlesnake roundup has grown from a local, community event to an annual attraction bringing thousands of visitors to Nolan County in west Texas. The roundup is now the largest event of its kind is the United States.

On this, the 25th anniversary of the Jaycees Rattlesnake Roundup, I would like to outline a little of the history of this west Texas tradition.

Since the days of the earliest pioneers, the area of west Texas has been heavily populated by the western diamondback rattlesnake. Year after year, the number of livestock killed or lamed by the bite of the rattlesnake increased, until, in 1958, the Sweetwater Jaycees decided to aid local farmers and ranchers by holding the first rattlesnake roundup. It is interesting to note that since the first roundup, approximately the same number of snakes have been captured each year. The average roundup nets around 5,000 pounds of snakes, with the exception of the 1982 roundup, when 18,000 pounds of rattlers were weighed in. This shows that while the hunt helps to control the snake population, it is by no means exterminating them.

The snake hunt begins with widespread hunting and collection of the poisonous reptile. The captured snakes are brought to the huge indoor coliseum, Nolan County Coliseum, and weighed in. The weigh-in operation can be viewed by the public only through heavy screen partitions. The snakes are placed in doubly lined and floored pits for public viewing.

Safety and handling demonstrations come next. False tales and rumors concerning rattlesnakes are discussed and explained by a professional snake handler. The public then leaves with a respect for the rattler based on understanding, rather than fear. They also leave knowing proper procedures to follow in case of a rattlesnake bite.

The snakes are then milked by professional handlers. The venom is made available for public and private research by reputable groups and individuals. Venom extracted from the snakes has proven to be quite useful in medical research. Treatment of certain ailments in unborn children, treatment of certain mental disorders, medical applications for snake bite and other medical benefits have come from the venom extracted at this Sweetwater event. Most recently, significant discoveries have been made in cancer research through tests with the venom coming from the Sweetwater Rattlesnake Roundup. The annual roundup offers the participant the opportunity of witnessing lectures emphasizing safety and factual information on rattlesnakes—sightseeing, snake meat, and souvenirs are also available. As added attractions, the Sweetwater Rifle and Pistol Club holds one of the largest gun and coin shows in the State, with exhibitors from across the Nation. Also, two collectables flea markets are held in conjunction with the roundup.

Two types of tours are provided for visitors. The first is a bus tour for interested people and photographers who only wish to watch the snakes being caught and not participate in the actual hunt. Another tour is provided for people who wish to hunt with the assistance of experienced hunters. Hunters are also able to hunt on their own certain specified ranches in the area; maps are provided. All hunters who wish to participate in any of these tours or hunts must register with the jaycees. The registration fee covers their hunting permit, insurance, and hunting instructions. Equipment is available for purchase at the coliseum. All captured snakes turned in at the roundup become property of the Sweetwater Jaycees.

A part of the roundup each year is the Miss Snake Charmer Queen pageant. Young women from the Sweetwater area compete for the crown of Miss Snake Charmer. The pageant takes place at the newly renovated Sweetwater Municipal Auditorium on the opening day of the roundup. Added attraction for this year's 25th anniversary roundup will be the rattlesnake review, a parade through downtown Sweetwater, two dances, and a 10-kilometer run on the final day.

The Sweetwater Jaycees, through its sponsorship of the roundup, are effectively informing countless thousands of people from all across the United States about the rattlesnake, and have been since this event began 25 years ago. I share the pride of all Texans in this fine organization and its support of the Sunshine Inn with this annual event.●

CONCLUSION OF MORNING BUSINESS

Mr. MATHIAS. Mr. President, what is the pending business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

OMNIBUS COMMITTEE FUNDING RESOLUTION OF 1983

The PRESIDING OFFICER. Under the previous order, the hour of 11:15 a.m. having arrived and passed, the Senate will now proceed to the consideration of Senate Resolution 76, which the clerk will report.

The legislative clerk read as follows:

A resolution (S. Res. 76) authorizing expenditures by committees of the Senate.

The Senate proceeded to consider the resolution.

Mr. MATHIAS. Mr. President, this morning we are considering how much the committees of the Senate should spend in 1983 to undertake investigations, to study proposed legislation, to report on legislation which is recommended to the full Senate and for that purpose to pay staffs, buy supplies and do all the other necessary things.

The committee budgets reported by the Rules Committee are lean budgets; they reflect the austere fiscal climate in which all governmental bodies find themselves. In order to inform my colleagues of the Rules Committee's recommendations to the Senate for 1983 committee spending, I will summarize the committee's report:

The Committee on Rules and Administration, in reporting an original measure incorporating the provisions of individual resolutions authorizing expenditures for Senate committees, recommends a total funding level for the standing committees of the Senate, the Special Committee on Aging, the Select Committee on Intelligence, and the Select Committee on Indian Affairs of $44,937,945 for the period March 1, 1983, through February 29, 1984, except for the Select Committee on Indian Affairs whose authorization extends from March 1, 1983, through January 2, 1984. The committee recommends further that the amounts for each committee be as follows:

Section	Committee	Amounts
3	Agriculture, Nutrition, and Forestry	1,363,825
4	Appropriations	4,080,310
5	Armed Services	1,907,807
6	Banking, Housing, and Urban Affairs	1,704,116
7	Budget	2,945,961
8	Commerce, Science, and Transportation	3,461,746
9	Energy and Natural Resources	2,338,584
10	Environment and Public Works	2,373,286
11	Finance	2,223,306
12	Foreign Relations	2,540,911
13	Governmental Affairs	4,574,249
14	Judiciary	4,451,074
15	Labor and Human Resources	4,346,000
16	Rules and Administration	1,298,033
17	Small Business	934,680
18	Veterans' Affairs	852,029
19	Aging (Special)	1,036,131
20	Intelligence (Select)	1,882,407
21	Indian Affairs (Select)	623,490
Grand total		44,937,945

This action reflects the decision of the Committee on Rules and Administration to recommend to the Senate that there be an increase in aggregate spending of Senate committees for this budget authorization period of no greater than 7.15 percent. This represents a reduction of 3.55 percentage points from the aggregate increase requested by Senate committees of 10.7 percent. These reductions were in keeping with the goals expressed in the Senate majority leader's letter of January 27, 1983, to the chairman of the Rules and Administration Committee in which the leader urged the Rules Committee to hold the line for 1983; in that letter, Senator BAKER noted the great progress made in the past 2 years in containing growth in Senate committee budgets, especially the 10 percent aggregate committee budget cut in 1981 and the 0 percentage increase in aggregate budget authorization for 1982.

Continuing, the majority leader stated:

Therefore it would be my recommendation that Committee budgets should maintain the current level of spending except for the mandated increases for health insurance and medicare, and the 4% October, 1982 pay raise. I would also suggest that we follow the President's proposal for freezing further pay increases which would be scheduled in October of 1983.

The committee took three major steps in achieving these recommended cuts in committee authorization amounts. First, each committee's request, where applicable, was reduced by amounts requested for October 1983, cost-of-living adjustments for staff salaries; by amounts requested for contingency expenses based on the possibility of July 1983, committee field hearings; and by amounts corresponding to corrections in arithmetic computations for agency contributions for life insurance, health insurance, and civil service requirement. In addition, the Committee on Armed Services budget request was reduced by $28,000 for word processing equipment; this equipment, if approved, will be provided to the Armed Services Committee at no direct cost to its budget.

Second, the Rules and Administration Committee held several days of hearings, with each committee's chairman and ranking minority member presenting their respective committee's plans for oversight and legislative review activities for the coming year. After these hearings, and a further review of committee budget submissions, several alternative plans for reducing committee budgets were formulated. The committee's goal was to achieve an aggregate increase in committee budget authorization of 6 to 7 percent.

I would pause at this moment, Mr. President, to pay special tribute and to express my thanks to the ranking minority member, the distinguished Senator from Kentucky (Mr. FORD), because he exhibited great patience during all these proceedings.

I think the committee benefited by his experience. He has been the chief executive of a State, the Governor of Kentucky, and he has had experience in helping to formulate State budgets. That experience is visible, evident, and extremely helpful in this budget process, which is never pleasant, never easy.

I would also pay particular thanks to the staff of the Rules Committee because they had to spend many hours computing different alternative systems of arriving at an accurate budget. They added and subtracted, they multiplied and they divided, and we finally came up with a formulation which we could, in good conscience, recommend to the Senate.

I am grateful to each member of the staff. I express my conviction that we would still be adding and subtracting if it had not been for their expert assistance.

The committee's third step consisted of meeting in markup session on February 28, 1983, and adopting a spending plan that holds committee spending increases to no more than $300,000 over the amounts authorized in 1982. In addition, each committee not affected by this cap has its requested spending increase reduced by 10 percent.

So we are asking of every committee a sacrifice in proportion to its committee budget request.

The committee notes, however, that the President may propose a cost-of-living adjustment for the Federal Government, effective October 1, 1983. If adopted, the committee will recommend to the Senate that this cost-of-living adjustment be granted to all Senate committees.

Mr. FORD addressed the Chair.

The PRESIDING OFFICER (Mrs. KASSEBAUM). The Senator from Kentucky.

Mr. FORD. Madam President, I want to take just a few moments to add my thinking to that of the distinguished Senator from Maryland (Mr. MATHIAS). He has made a fine presentation of what the Committee on Rules and Administration did in reaching its decisions on the presentation of the committee budgets to the Senate.

Madam President, as I have said many times before, it is a difficult, unpleasant, and thankless task that we confront in passing judgment on our colleagues. Reviewing and recommending action on committee budget requests is never easy.

Two years ago, we managed, with considerable painful effort, to reduce Senate committee budgets by 10 percent. In 1982, we held the line and recommended an overall budget for committees in the same amount as had been authorized for 1981. This was done despite substantial increases in costs of operation.

Several changes in the law enacted last year imposed mandatory cost in-

creases on committees for 1983, in health insurance, medicare, and cost-of-living salary increases. These are estimated to amount to an increase of 6.3 percent over the committee budget level of $42,186,689 authorized for 1982.

The majority leader has requested that we try to hold the committee budget to that 6.3-percent increase for 1983. Senate Resolution 76 does not quite meet this level, but it comes very close to it; yet it will not, in my opinion, handicap our committees when they face the heavy and important calendar of legislative business that lies ahead of us in 1983.

The committees this year submitted requests which were reasonable and in which the increases asked were quite effectively justified. In fact, the total requests, despite rising costs, still totaled several hundred thousand dollars less than was authorized in 1980. At our direction, the Rules Committee staff deleted over $500,000 from the committee requests by eliminating provisions for the October 1983 cost-of-living salary increase and by making some further necessary calculation corrections. Our final recommendation reduces the aggregate for all committees by only 2 percentage points.

If we approve this resolution, we will have come very close to the target established by the majority leader. We will have approved a budget smaller than that approved in 1980, despite the recognized substantial cost increases the committees have faced.

Madam President, let me repeat that. We will have approved a budget smaller than that approved in 1980.

Mr. MATHIAS. If the Senator will yield, I think that is important, and I would suspect it is the only place in the entire Government that that is likely to be possible.

Mr. FORD. And I say to the Senator, I am glad to be associated with him on this landmark occasion.

We will also in my opinion be enabling the committees to do a responsible job in 1983.

I urge by colleagues to support this resolution without change.

Madam President, on occasion you have an opportunity to know individuals, but you really get to know them when you work with them in the decisionmaking process.

Making decisions probably is one of the hardest things we have to do. But when we give up the right to make decisions, we are giving up something very precious.

I want to pay tribute to my good friend, the distinguished Senator from Maryland. I found that he is a man of patience, a man who has never lost his good humor. On the many times I have dealt with him in all of the seemingly minor details that seem to keep coming and coming, he has never lost his good humor. I think he ought to be complimented for his fairness also.

Madam President, I want to compliment the staff of the Rules Committee on both sides of the aisle. They worked as one, made decisions in helping each other, and came up with recommendations to give the members of the committee an opportunity to make the ultimate recommendations to the Senate under this resolution.

Madam President, I do not think that I should sit down without complimenting the staff members of the various committees which came before us in presenting their committee's requests. I found that those staff members that came with the various committees were well qualified, intelligent, knew what they were talking about, and walked the thin line of protecting their committees while answering the questions that were posed to them by our committee members.

So I compliment the committees on the staffs that they had representing them before us.

Madam President, I hope there will be no amendments to this resolution and that we can proceed with the adoption of what I think is a landmark piece of legislation.

Mr. MATHIAS. Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MATHIAS. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MATHIAS. Madam President, I move the adoption of the resolution.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 76) was agreed to, as follows:

S. RES. 76

Resolved, That this resolution may be cited as the "Omnibus Committee Funding Resolution of 1983".

AGGREGATE AUTHORIZATION

SEC. 2. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, and under the appropriate authorizing resolutions of the Senate, there is authorized in the aggregate $44,937,945, in accordance with the provisions of this resolution, for all standing committees of the Senate, the Special Committee on Aging, the Select Committee on Intelligence, and the Select Committee on Indian Affairs.

(b) Each committee referred to in subsection (a) shall report its findings, together with such recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than January 2, 1984, in the case of the Select Committee on Indian Affairs, and not later than February 29, 1984, in the case of any other such committee.

(c) Any expenses of a committee under this resolution shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee, except that vouchers shall not be required for the disbursement of salaries of employees of the committee who are paid at an annual rate.

COMMITTEE ON AGRICULTURE, NUTRITION, AND FORESTRY

SEC. 3. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Committee on Agriculture, Nutrition, and Forestry is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $1,363,825, of which amount (1) not to exceed $2,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended), and (2) not to exceed $4,000 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

COMMITTEE ON APPROPRIATIONS

SEC. 4. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraph 1 of rule XXVI of the Standing Rules of the Senate, the Committee on Appropriations is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $4,080,310, of which amount (1) not to exceed $80,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended), and (2) not to exceed $8,000 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

COMMITTEE ON ARMED SERVICES

SEC. 5. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Committee on Armed Services is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make ex-

penditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department of agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $1,907,807, of which amount (1) not to exceed $15,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended), and (2) not to exceed $10,000 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS

SEC. 6. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Committee on Banking, Housing, and Urban Affairs is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $1,704,116, of which amount (1) not to exceed $1,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended), and (2) not to exceed $1,000 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

COMMITTEE ON THE BUDGET

SEC. 7. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraph 1 of rule XXVI of the Standing Rules of the Senate, the Committee on the Budget is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $2,945,961, of which amount not to exceed $50,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

COMMITTEE ON COMMERCE, SCIENCE, AND TRANSPORTATION

SEC. 8. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Committee on Commerce, Science, and Transportation is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $3,461,746, of which amount (1) not to exceed $20,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, amended), and (2) not to exceed $8,000 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

COMMITTEE ON ENERGY AND NATURAL RESOURCES

SEC. 9. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by pargraph 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Committee on Energy and Natural Resources is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $2,338,584.

COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

SEC. 10. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Committee on Environment and Public Works is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $2,373,286, of which amount (1) not to exceed $10,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended), and (2) not to exceed $3,000 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

COMMITTEE ON FINANCE

SEC. 11. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Commitee on Finance is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $2,223,306, of which amount not to exceed $30,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

COMMITTEE ON FOREIGN RELATIONS

SEC. 12. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the standing Rules of the Senate, the Committee on Foreign Relations is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $2,540,911, of which amount not to exceed $18,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

COMMITTEE ON GOVERNMENTAL AFFAIRS

SEC. 13. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Committee on Governmental Affairs is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $4,574,249, of which amount (1) not to exceed $189,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended), and (2) not to exceed $4,725 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

(c)(1) The committee, or any duly authorized subcommittee thereof, is authorized to study or investigate—

(A) the efficiency and economy of operations of all branches of the Government including the possible existence of fraud, misfeasance, malfeasance, collusion, mismanagement, incompetence, corruption, or unethical practices, waste, extravagance, conflicts of interest, and the improper expenditure of Government funds in transactions, contracts, and activities of the Government or of Government officials and employees and any and all such improper practices between Government personnel and corporations, individuals, companies, or persons affiliated therewith, doing business with the Government; and the compliance or noncompliance of such corporations, companies, or individuals or other entities with the rules, regulations, and laws governing the various governmental agencies and its relationships with the public;

(B) the extent to which criminal or other improper practices or activities are, or have been, engaged in the field of labor-management relations or in groups or organizations of employees or employers, to the detriment of interests of the public, employers, or employees, and to determine whether any changes are required in the laws of the United States in order to protect such interests against the occurrence of such practices or activities;

(C) organized criminal activity which may operate in or otherwise utilize the facilities of interstate or international commerce in furtherance of any transactions and the manner and extent to which, and the identity of the persons, firms, or corporations, or other entities by whom such utilization is being made, and further, to study and investigate the manner in which and the extent to which persons engaged in organized criminal activity have infiltrated lawful business enterprise, and to study the adequacy of Federal laws to prevent the operations of organized crime in interstate or international commerce; and to determine whether any changes are required in the laws of the United States in order to protect the public against such practices or activities;

(D) all other aspects of crime and lawlessness within the United States which have an impact upon or affect the national health, welfare, and safety; including but not limited to investment fraud schemes, commodity and security fraud, computer fraud, and the use of offshore banking and corporate facilities to carry out criminal objectives;

(E) the efficiency and economy of operations of all branches and functions of the Government with particular reference to—

(i) the effectiveness of present national security methods, staffing, and processes as tested against the requirements imposed by the rapidly mounting complexity of national security problems;

(ii) the capacity of present national security staffing, methods, and processes to make full use of the Nation's resources of knowledge, talents;

(iii) the adequacy of present intergovernmental relationships between the United States and international organizations principally concerned with national security of which the United States is a member; and

(iv) legislative and other proposals to improve these methods, processes and relationships;

(F) the efficiency, economy, and effectiveness of all agencies and departments of the Government involved in the control and management of energy shortages including, but not limited to, their performance with respect to—

(i) the collection and dissemination of accurate statistics on fuel demand and supply;

(ii) the implementation of effective energy conservation measures;

(iii) the pricing of energy in all forms;

(iv) coordination of energy programs with State and local government;

(v) control of exports of scarce fuels;

(vi) the management of tax, import, pricing, and other policies affecting energy supplies;

(vii) maintenance of the independent sector of the petroleum industry as a strong competitive force;

(viii) the allocation of fuels in short supply by public and private entities;

(ix) the management of energy supplies owned or controlled by the Government;

(x) relations with other oil producing and consuming countries;

(xi) the monitoring of compliance by governments, corporations, or individuals with the laws and regulations governing the allocation, conservation, or pricing of energy supplies; and

(xii) research into the discovery and development of alternative energy supplies; and

(G) the efficiency and economy of all branches and functions of Government with particular reference to the operations and management of Federal regulatory policies and programs:

Provided, That, in carrying out the duties herein set forth, the inquiries of this committee or any subcommittee thereof shall not be deemed limited to the records, functions, and operations of any particular branch of the Government; but may extend to the records and activities of any person, corporation, or other entity.

(2) Nothing contained in this section shall affect or impair the exercise of any other standing committee of the Senate of any power, or the discharge by such committee of any duty, conferred or imposed upon it by the Standing Rules of the Senate or by the Legislative Reorganization Act of 1946, as amended.

(3) For the purpose of this section the committee, or any duly authorized subcommittee thereof, or its chairman, or any other member of the committee or subcommittee designated by the chairman, from March 1, 1983, through February 29, 1984, is authorized, in its, his, or their discretion (A) to require by subpena or otherwise the attendance of witnesses and production of correspondence, books, papers, and documents, (B) to hold hearings, (C) to sit and act at any time or place during the sessions, recess, and adjournment periods of the Senate, (D) to administer oaths, and (E) to take testimony, either orally or by sworn statement, or, in the case of staff members of the Permanent Subcommittee on Investigations specifically authorized by the chairman, by deposition.

(4) All subpenas and related legal processes of the committee and its subcommittees authorized under S. Res. 57 of the Ninety-seventh Congress, first session, and S. Res. 333 of the Ninety-seventh Congress, second session, are authorized to continue.

(5) In voting whether to close any meeting or hearing of the Permanent Subcommittee on Investigations pursuant to rule XXVI(5)(b) of the Standing Rules of the Senate, written proxies specifically identifying the subject of the hearing may be counted.

COMMITTEE ON THE JUDICIARY

SEC. 14. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Committee on the Judiciary is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $4,451,074, of which amount (1) not to exceed $66,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended), and (2) not to exceed $1,400 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

COMMITTEE ON LABOR AND HUMAN RESOURCES

SEC. 15. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Committee on Labor and Human Resources is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $4,346,000, of which amount not to exceed $90,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

COMMITTEE ON RULES AND ADMINISTRATION

SEC. 16. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate,

the Committee on Rules and Administration is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department of agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $1,298,033, of which amount not to exceed $5,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

COMMITTEE ON SMALL BUSINESS

SEC. 17. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Committee on Small Business is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $934,680.

COMMITTEE ON VETERANS' AFFAIRS

SEC. 18. (a) In carrying out its powers, duties, and functions under the Standing Rules of the Senate, in accordance with its jurisdiction under rule XXV of such rules, including holding hearings, reporting such hearings, and making investigations as authorized by paragraphs 1 and 8 of rule XXVI of the Standing Rules of the Senate, the Committee on Veterans' Affairs is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $852,029.

SPECIAL COMMITTEE ON AGING

SEC. 19. (a) In carrying out the duties and functions imposed by section 104 of S. Res. 4, Ninety-fifth Congress, agreed to February 4, 1977, and in exercising the authority conferred on it by such section, the Special Committee on Aging is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the special committee under this section shall not exceed $1,036,131, of which amount (1) not to exceed $35,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended), and (2) not to exceed $1,000 may be expended for the training of the professional staff of such committee (under procedures specified by section 202(j) of such Act).

SELECT COMMITTEE ON INTELLIGENCE

SEC. 20. (a) In carrying out its powers, duties, and functions under S. Res. 400, agreed to May 19, 1976, in accordance with its jurisdiction under section 3(a) of such resolution, including holding hearings, reporting such hearings, and making investigations as authorized by section 5 of such resolution, the Select Committee on Intelligence is authorized from March 1, 1983, through February 29, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of personnel of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $1,882,407, of which amount (1) not to exceed $20,000 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

SELECT COMMITTEE ON INDIAN AFFAIRS

SEC. 21. (a) In carrying out the duties and functions imposed on it by section 105 of S. Res. 4, Ninety-fifth Congress, agreed to February 4 (legislative day, February 1), 1977, as amended, and in exercising the authority conferred on it by such section, the Select Committee on Indian Affairs is authorized from March 1, 1983, through January 2, 1984, in its discretion (1) to make expenditures from the contingent fund of the Senate, (2) to employ personnel, and (3) with the prior consent of the Government department or agency concerned and the Committee on Rules and Administration, to use on a reimbursable basis the services of any such department or agency.

(b) The expenses of the committee under this section shall not exceed $623,490, of which amount not to exceed $16,667 may be expended for the procurement of the services of individual consultants, or organizations thereof (as authorized by section 202(i) of the Legislative Reorganization Act of 1946, as amended).

REPEALER

SEC. 22. Senate Resolution 59 of the Ninety-eighth Congress, agreed to February 16, 1983, is repealed.

Mr. MATHIAS. I move to reconsider the vote by which the resolution was agreed to.

Mr. FORD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MATHIAS. Madam President, I once again express my appreciation to the distinguished ranking minority member of the Rules Committee, the Senator from Kentucky (Mr. FORD), and members of the staff for their work in connection with this resolution.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. PRESSLER). Without objection, it is so ordered.

SEQUENTIAL REFERRAL—S. 434

Mr. BAKER. Mr. President, I have a request here for a sequential referral which appears to be cleared on both sides. May I state that request for the benefit of the minority leader and for the Senate?

Mr. BYRD. Mr. President, it has been cleared on this side.

Mr. BAKER. I thank the minority leader.

Mr. President, I ask unanimous consent that once the Committee on Banking, Housing and Urban Affairs has reported S. 434, a bill to create a new Office of Strategic Trade in the executive branch of the Federal Government, it then be referred to the Committee on Governmental Affairs for a period not to exceed 60 calendar days.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE CALENDAR

Mr. BAKER. Mr. President, I have a series of seven items which are cleared on my calendar for action by unanimous consent. I inquire of the minority leader if he is prepared to consider all or any part of this list on that basis: Calendar Order Nos. 23, 24, 25, 26, 27, 28, and 31.

Mr. BYRD. Mr. President, this side is ready to proceed.

LAND CLAIM IN LIVINGSTON PARISH, LA.

The bill (S. 420) to quiet title and possession with respect to a certain private land claim in Livingston Parish, La., was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 420

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of this Act only, the limitation provision of section 1 of the Act of December 22, 1928, as amended (45 Stat. 1069; 43 U.S.C. 1068), popularly known as the Color-of-Title Act, that restricts conveyances under that Act to not more than 160 acres, shall not apply to any claim for a patent that may be filed under the Color-of-Title Act for a parcel of land described as section 39, township 5 south, range 4 east, Saint Helena Meridian, Louisiana.

SEC. 2. Except as otherwise provided in section 2 of this Act, all provisions of the Color-of-Title Act shall apply to any claim

for a patent under the Color-of-Title Act for the parcel of land described in the first section of this Act.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BYRD. Mr. President, I move to lay that motion on the table.

AMERICAN FALLS RESERVOIR

The bill (S. 459) to authorize and direct the Secretary of the Interior to convey, by quitclaim deed, all right, title, and interest of the United States in and to certain lands that were withdrawn or acquired for the purpose of relocating a portion of the city of American Falls out of the area flooded by the American Falls Reservoir, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 459

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is hereby authorized and directed to convey by quitclaim deed to the city of American Falls, Idaho, without cost, the following real property located within or adjacent to the city limits of said city of American Falls, reserving all right-of-way and oil and gas in land to the United States.

(a) The area identified as the Campbell Stebbins Park, containing approximately 41.5 acres, including the park area located between the Oregon Trail Highway and the Oregon Short Line Railroad, and the area identified as a Public Square, containing approximately 8.8 acres, all as shown on the official plat of the Reclamation Addition to the city of American Falls approved October 18, 1923, and recorded in the county of Power, Idaho, as instrument numbered 32042.

(b) Block 44 of the original townsite of American Falls; containing approximately 3.3 acres.

(c) A tract of land containing 11.7 acres, more or less, described as follows:

Beginning at the northwest corner of the southwest quarter of section 21, township 7 south, range 31 east, Boise meridian;

thence south 45 degrees 16 minutes east, a distance of 1,870.3 feet, more or less, to the southeast corner of said southwest quarter;

thence north 58 degrees 28 minutes west, a distance of 96.3 feet;

thence north 68 degrees 17 minutes west, a distance of 1,339.2 feet, more or less, to a point on the west section line of said section 21, and said point being 548.2 feet north of the southwest corner of said section;

thence north along the west section line a distance of 770.5 feet, more or less, to the northwest corner of the southwest quarter of said section 21, the point of beginning.

(d) A tract of land containing 8.79 acres more or less in the south half of the southwest quarter, section 28, township 7 south, range 31 east, Boise meridian, Idaho, and more particularly described as follows:

Beginning at the southwest corner of said section 28;

thence north 44 degrees and 38 minutes east, 1,868.6 feet to the 16/17 corner of said section;

thence east along the north boundary of the southeast quarter southwest quarter of said section 28, 367.2 feet to a point;

thence south 324.9 feet to a point;

thence north 89 degrees and 59 minutes west, 92.8 feet to a point;

thence south 49 degrees and 23 minutes west, 361.9 feet to a point;

thence south 78 degrees and 34 minutes west, 708 feet to a point;

thence south 26 degrees and 55 minutes west, 333.7 feet to a point;

thence south 61 degrees and 51 minutes west, 271.6 feet to a point;

thence south 43 degrees and 29 minutes west, 280.3 feet to a point on the south boundary of said section 28;

thence south 89 degrees and 59 minutes west along the south boundary of said section 28, 34.9 feet to the place of beginning.

(e) A tract of land containing 8.0 acres, more or less, located in the west half of the southwest quarter, section 28, township 7 south, range 31 east, Boise meridian, Idaho, and more particularly described as follows:

Beginning at the southwest corneer of section 28;

thence north 44 degrees 38 minutes east, a distance of 1,886.6 feet to the northeast corner of the southwest quarter southwest quarter, of section 28;

thence north a distance of 1,320 feet to the northeast corner of the northwest quarter southwest quarter of section 28;

thence west, a distance of 30 feet to a point on the east edge of Hillcrest Avenue;

thence southwesterly along a curve on the side of Hillcrest Avenue a distance of 2,955 feet to a point on line between sections 28 and 29;

thence south 65.0 feet to the southwest corner of section 28, the place of beginning.

Such property shall be conveyed subject to the reservation of rights-of-way for ditches, canals, and pipelines constructed by the authority of the United States and to other existing rights-of-way of record. The conveyance of such property shall contain a reservation to the United States of all oil and gas in the land, together with the right to prospect for, mine, and remove the same under such regulation as the Secretary of the Interior may prescribe.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BYRD. Mr. President, I move to lay that motion on the table.

ADDITION TO EFFIGY MOUNDS NATIONAL MONUMENT

The bill (S. 473) to authorize the Secretary of the Interior to acquire certain lands by exchange for addition to Effigy Mounds National Monument in the State of Iowa, and for other purposes, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 473

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Secretary of the Interior is authorized to accept a conveyance of approximately four acres of land adjacent to the Effigy Mounds National Monument in the State of Iowa, and in exchange therefor to convey the grantor, without monetary consideration, approximately three acres of land within the monument, all as described in subsection (b) of this section. Effective upon consummation of the exchange, the land accepted by the Secretary shall become part of Effigy Mounds National Monument, subject to the laws and regulations applicable thereto, and the land conveyed by the Secretary shall cease to be part of the monument and the boundary of the monument is revised accordingly.

(b) The land referred to in subsection (a) which may be accepted by the Secretary is more particularly described as that portion of the southeast quarter of the southeast quarter of section 28 lying south and east of County Road Numbered 561, and the land referred to in subsection (a) which may be conveyed by the Secretary is more particularly described as that portion of the northeast quarter of the northeast quarter of section 33 lying north and west of County Road Numbered 561, all in township 96 north, range 3 west, fourth principal meridian, Allamakee County, Iowa.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BYRD. Mr. President, I move to lay that motion on the table.

CONVEYANCE OF CERTAIN FEDERAL LANDS

The bill (S. 577) to provide for the conveyance of certain Federal lands adjacent to Orchard and Lake Shore Drives, Lake Lowell, Boise project, Idaho, was considered.

● Mr. McCLURE. Mr. President, the Committee on Energy and Natural Resources does not intend that this measure (S. 577) authorize any additional budget authority for fiscal year 1983 than that already available to the Department of the Interior. The committee intends that any fiscal year 1982 costs incurred from the bill will be absorbed from existing funds.●

The bill (S. 577) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 577

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. The Secretary of the Interior (hereinafter referred to as the "Secretary") is hereby authorized to convey all right, title, and interest, except as reserved herein, to certain small tracts of Federal lands located adjacent to Orchard and Lake Shore Drives, Lake Lowell, Boise project, Idaho, to the adjacent landowners.

SEC. 2. Such conveyances shall be made by the Secretary only to the adjacent landowners, and shall be made within one year from the date of his receipt of a proper application from such landowners. Applicants for such conveyances must pay the fair market value of the lands as of the date of the conveyance, including administrative costs, but excluding the costs to the Government of conducting the necessary land surveys and preparing the legal descriptions of the land to be conveyed. In determining the fair market value of the lands, the Secretary shall not include the value of any improvements made to the lands by the adjacent landowners or their predecessors.

SEC. 3. All conveyances made pursuant to this Act shall reserve to the United States all mineral deposits in the lands and shall assure that the right to mine and remove such minerals is subservient to the surface rights granted in the conveyances.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BYRD. Mr. President, I move to lay that motion on the table.

SAINT CROIX ISLAND INTERNATIONAL HISTORIC SITE

The joint resolution (S.J. Res. 25) redesignating the Saint Croix Island National Monument in the State of Maine as the "Saint Croix Island International Historic Site," was considered.

● Mr. MITCHELL. Mr. President, I support Senate Joint Resolution 25, a resolution redesignating St. Croix Island National Monument in the State of Maine as an international historic site.

St. Croix Island National Monument is a small portion of the National Park System that lies within the boundaries of Calais, Maine. It is of important historical significance as one of the first colonies settled in North America. In June 1604, a French expedition led by Sieur de Monts and the geographer Samuel de Champlain established a settlement which lasted for 1 year. Champlain later went on to found Quebec and explore other parts of Canada. He is still regarded as the father of Quebec and a founder of Canada.

St. Croix Island was placed on the American side of the United States-Canadian border upon completion of boundary negotiations between the two countries at the end of the Revolutionary War.

This island is of historic importance to the State of Maine and to our Canadian neighbors. By designating it as an international historic site, we will build on the cooperative effort currently underway between Maine and the Canadian Province of New Brunswick, and preserve that which is of historical, cultural and recreational significance.

Enactment of Senate Joint Resolution 25 will neither affect the status of St. Croix Island as a unit of the National Park System nor disrupt management by the National Park Service. Rather, it will serve to recognize its importance to Americans and Canadians alike.

Senator COHEN and I introduced a similar measure last year which passed the Senate in amended form, but failed to gain support in the House. I am therefore very gratified to see that the Senate Committee on Energy and Natural Resources has acted promptly on the resolution and commend my colleagues on that committee for their support and speedy action.

Mr. President, I urge adoption of the resolution.●

The joint resolution (S.J. Res. 25) was ordered to be engrossed for a third reading, read the third time, and passed.

The preamble was agreed to.

The joint resolution, and the preamble, are as follows:

S.J. Res. 25

Whereas in the summer of 1604, a small French expedition led by Sieur de Monts established the first European settlement in the northern half of North America on what is now Saint Croix Island, on the Saint Croix River, in the State of Maine;

Whereas pursuant to the Act entitled "An Act to authorize the establishment of the Saint Croix Island National Monument in the State of Maine" (approved June 8, 1949), portions of Saint Croix Island of national historical importance were established as the Saint Croix Island National Monument, a unit of the National Park System;

Whereas the historic settlement on Saint Croix Island marked the beginning of European colonization of Canada, from which the French embarked to establish the settlement which became Quebec; and

Whereas Saint Croix Island is important to the history of the people of Canada as well as that of the people of the United States: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress asembled, That (a) in recognition of its historic significance to the United States and Canada, the Saint Croix Island National Monument in the State of Maine is hereby redesignated as the "Saint Croix Island International Historic Site".

(b) Any reference in a law, map, regulation, document, record, or other paper of the United States to such monument shall be deemed to be a reference to the "Saint Croix Island International Historic Site".

(c) Nothing in this joint resolution shall affect the status of the "Saint Croix Island International Historic Site" as a national monument and a unit of the National Park System.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the joint resolution was passed.

Mr. BYRD. I move to lay that motion on the table.

WOMEN'S HISTORY WEEK

The Senate proceeded to consider the joint resolution (S.J. Res. 37) providing that the week containing March 8, 1983, 1984, and 1985, shall be designated as "Women's History Week" which had been reported from the Committee on the Judiciary with an amendment on page 2, line 3, strike "1984 and 1985",'

So as to make the joint resolution read:

Whereas American women of every race, class, and ethnic background helped found the Nation in countless recorded and unrecorded ways as servants, slaves, nurses, nuns, homemakers, industrial workers, teachers, reformers, soldiers, pioneers; and in professions and occupations representative of all walks of life;

Whereas American women have played and continue to play a critical economic, cultural, and social role in every sphere of our Nation's life by constituting a significant portion of the labor force working in and outside of the home;

Whereas American women have played a unique role throughout our history by providing the majority of the Nation's volunteer labor force and have been particularly important in the establishment of early charitable philanthropic and cultural institutions in the country;

Whereas American women of every race, class, and ethnic background served as early leaders in the forefront of every major progressive social change movement, not only to secure their own right of suffrage and equal opportunity, but also in the abolitionist movement, the emancipation movement, the industrial labor union movement, and the modern civil rights movement; and

Whereas despite these contributions, the role of American women in history has been consistently overlooked and undervalued in the body of American history: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the week containing March 8, 1983, 1984, and 1985, is designated as "Women's History Week", and the President is requested to issue a proclamation calling upon the people of the United States to observe such week with appropriate ceremonies and activities.

The amendment was agreed to.

Mr. MATHIAS. Mr. President, the achievements and contributions of women in our national heritage have too long gone unrecognized and undervalued. Discrimination and stereotyping have obscured the many significant contributions and the great potential of the women of our Nation. There is a need to balance the record of history, and to restructure our vision for the future.

It is for this reason that I am pleased to cosponsor, once again, the resolution designating the week containing March 8 as "Women's History Week." This week is to be set aside to celebrate the wealth of women's accomplishments with special school and citizen events. This celebration has been met with much enthusiasm in my own State of Maryland. The first Maryland Women's History Week in 1981 was inspired by similar celebrations which had been held in 14 States since 1978. The primary focus was on developing activities in schools, libraries, and in community organizations to supplement activities and materials that have traditionally covered little of the history of women. The community activities were varied and creative, ranging from a luncheon attended by several hundred people honoring outstanding women to lectures, scholarships, and radio spots.

This is the third year that Maryland has officially commemorated Maryland Women's History Week. The theme, "Celebrating the Maryland Mosaic; Maryland Women of Diverse Cultures," focuses on the diversity of cultural and ethnic backgrounds of the women of Maryland. A major ob-

jective of this year's celebration is to nurture an appreciation of the contributions and strengths of minority women, both famous and unsung, throughout Maryland's history.

Perhaps, someday, history texts and other sources of information will be records of the contributions of all Americans, women and men. At this time, however, women and their accomplishments are largely invisible in our history. In proclaiming Women's History Week, we pledge ourselves to rediscover and credit the accomplishments of the countless women who have contributed and continue to contribute to the strength of our country's economic, political, scientific, and cultural achievements. Mr. President, it is my pleasure to cosponsor Senate Joint Resolution 37.

The joint resolution was ordered to be engrossed for a third reading, read the third time, and passed.

The preamble was agreed to.

The title was amended so as to read: "Joint resolution providing that the week containing March 8, 1983, shall be designated as 'Women's History Week'."

Mr. BAKER. Mr. President, I move to reconsider the vote by which the joint resolution was passed.

Mr. BYRD. I move to lay that motion on the table.

AMERICAN BUSINESS WOMEN'S DAY

The joint resolution (Senate Joint Resolution 18), designating September 22, 1983, as "American Business Women's Day," was considered, ordered to be engrossed for a third reading, read the third time, and passed.

The preamble was agreed to.

The joint resolution, and the preamble, are as follows:

S.J. RES. 18

Whereas there are forty-three million working women integrally involved in determining the direction of both the private and public sectors of our Nation;

Whereas American businesswomen hold active, responsible, decisionmaking roles at all levels of business, and thus influence the direction of our Nation; and

Whereas the Congress recognizes the important contributions of American businesswomen to our Nation's continuing vitality: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That September 22, 1983, is designated "American Business Women's Day." The President is authorized and requested to issue a proclamation calling upon the people of the United States to observe that day with appropriate ceremonies and activities.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the joint resolution was passed.

Mr. BYRD. I move to lay that motion on the table.

ORDER TO EXTEND THE TIME FOR TRANSACTION OF ROUTINE MORNING BUSINESS UNTIL 3 P.M.

Mr. BAKER. Mr. President, I ask unanimous consent that the time for the transaction of routine morning business be extended to not later than the hour of 3 p.m. today and that the limitation for time for Senators to speak as it applies to the distinguished minority leader be lifted so that he may speak without limitation as to time. It is my understanding that the distinguished minority leader may deliver an address in the continuing series of addresses which he has given to the Senate on the history of the Senate which represents a major compilation of the history of this institution.

If it is agreeable to the minority leader, I ask unanimous consent, as well, that at the conclusion of the presentation on the history of the Senate by the distinguished minority leader, the Chair place the Senate in recess over until tomorrow under the order previously entered.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. I thank the Senator.

Mr. President, I thank all Senators for their cooperation.

Mr. BYRD. I thank the majority leader.

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD. Mr. President, as in the past, I will be glad to relinquish the floor at any time to a Senator who seeks the floor. In doing so, I ask unanimous consent, if such does occur, that my statement not show an interruption in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

(During Mr. BYRD's subsequent remarks the following occurred:)

Mr. BYRD. Mr. President, I yield to the majority leader.

Mr. BAKER. I thank the majority leader.

ORDER OF BUSINESS

Mr. BAKER. Mr. President, there are a number of routine matters that may be dealt with by unanimous consent. I have a list of them here and I will inquire of the minority leader if he is prepared to proceed to their consideration. First, Mr. President, a request in respect to H.R. 1572. Is the minority leader prepared now to proceed to its consideration?

Mr. BYRD. I am so prepared.

Mr. BAKER. I thank the Senator.

REPEALING SECTION 311 OF THE FEDERAL PUBLIC TRANSPORTATION ACT OF 1982

Mr. BAKER. Mr. President, I ask unanimous consent that the Senate turn to the consideration of H.R. 1572, a bill to repeal section 311 of the Federal Public Transportation Act of 1983.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will state the bill by title.

The assistant legislative clerk read as follows:

A bill (H.R. 1572) to repeal section 311 of the Federal Public Transportation Act of 1982.

The Senate proceeded to consider the bill which was deemed to have been read twice by title.

Mr. MATTINGLY. Mr. President, the legislation which we are considering today, H.R. 1572, would repeal section 311 of the Surface Transportation Act. This provision of the law only affects the Metropolitan Atlanta Rapid Transit Authority (MARTA) and is no longer needed in Federal law.

Section 311 was included in the Surface Transportation Act in order to give State and local officials the ability to make some decisions about the direction of the rapid transit line. In an effort that could be used as a model of cooperation and diplomacy, metropolitan city and county officials and members of the Georgia General Assembly joined together to reach a compromise. It is refreshing to see parochial interests set aside for the good of the community as a whole.

By repealing section 311, we in Congress can allow the Georgia General Assembly to implement the compromise. In a fair manner, construction of the transit line can take place toward the northern portions of Dekalb County as well as toward the airport.

The Georgia leaders who worked so diligently to serve the communities in the greater Atlanta metropolitan area should be congratulated and commended for their efforts.

The bill (H.R. 1572) was passed.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

JOINT REFERRAL OF THE NATIONAL SEA GRANT COLLEGE PROGRAM

Mr. BAKER. Mr. President, I have a request dealing with a joint referral of legislation dealing with the sea grant college program. I will state the re-

quest for the benefit of the minority leader and other Senators.

I ask unanimous consent that when the Senator from Rhode Island (Mr. PELL) introduces legislation to authorize additional appropriations for the national sea grant college program, it be referred jointly to the Committee on Commerce, Science, and Transportation and the Committee on Labor and Human Resources.

The PRESIDING OFFICER. Without objection, it is so ordered.

WITHHOLDING FROM SALARIES OF SENATE PAGES AMOUNTS EQUAL TO THE CHARGES IMPOSED ON PAGES RESIDING IN THE PAGE RESIDENCE HALL

Mr. BAKER. Mr. President, I have a resolution dealing with withholding of salaries from Senate pages for deposit in the House revolving fund for pages. If the minority leader is prepared to do so, I would like to do that.

Mr. BYRD. I am ready to proceed.

Mr. BAKER. I thank the Senator.

I send to the desk a resolution for myself and Mr. BYRD and ask for its immediate consideration.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The clerk will state the resolution by title.

The assistant legislative clerk read as follows:

A resolution (S. Res. 78) to authorize the Secretary of the Senate to withhold from the salaries of Senate pages, and deposit in the House revolving fund for pages, amounts equal to the charges imposed on pages residing in the page residence hall.

The Senate proceeded to consider the resolution.

The resolution (S. Res. 78) was agreed to as follows:

S. RES. 78

Resolved, That the Secretary of the Senate is authorized to withhold from the salary of each Senate page who resides in the page residence hall an amount equal to the charge imposed for lodging, meals, and related services, furnished to such page in such hall. The amounts so withheld shall be transferred by the Secretary of the Senate to the Clerk of the House of Representatives for deposit by such Clerk in the revolving fund, within the contingent fund of the House of Representatives, for the page residence hall and page meal plan, as established by H. Res. 64, 98th Congress.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

THE EXECUTIVE CALENDAR

Mr. BAKER. Mr. President, there are five items on the Executive Calendar of today, together with nominations placed on the Secretary's desk in the Foreign Service, that we are prepared to consider by unanimous consent.

All of them appear following the heading of "New Reports." They are two in the Judiciary, one in the Department of Justice, two in the Federal Home Loan Bank Board and, of course, the other nominations just placed on the Secretary's desk in the Foreign Service.

Is the minority leader prepared to agree that we might consider those nominations by unanimous consent at this point?

Mr. BYRD. Mr. President, I regret that the minority is not ready to proceed with the nominations enumerated by the distinguished majority leader, with the exception of the nominations under "New Reports" of the Judiciary and the Department of Justice.

Mr. BAKER. Very well.

EXECUTIVE SESSION

Mr. BAKER. Mr. President, I ask unanimous consent that the Senate now go into executive session for the purpose of considering two nominations on today's Executive Calendar under the Judiciary, being Calendar Orders Nos. 32 and 33, and one under the Department of Justice, being Calendar Order No. 34.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. BAKER. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

The assistant legislative clerk proceeded to read several nominations.

The PRESIDING OFFICER. The nominations previously enumerated are considered en bloc and confirmed en bloc.

The nominations considered and confirmed en bloc follow:

THE JUDICIARY

Gregory Wright Carman, of New York, to be a Judge of the U.S. Court of International Trade.

Shirley Wohl Kram, of New York, to be United States District Judge for the Southern District of New York.

DEPARTMENT OF JUSTICE

James W. Diehm, of the Virgin Islands, to be United States Attorney for the District of the Virgin Islands for the term of four years.

Mr. BAKER. Mr. President, I move to reconsider the vote by which the nominations were confirmed.

Mr. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. BAKER. Mr. President, I ask unanimous consent that the President be immediately notified that the Senate has given its consent to these nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. BAKER. Mr. President, I ask unanimous consent that the Senate now return to legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. BAKER. Mr. President, on tomorrow, under the order previously entered, there will be a vote on the amendment to the convention dealing with international expositions. At the conclusion of the business of the Senate on tomorrow, the Senate will stand in adjournment until Monday next.

On Monday, the Senate will turn to the consideration of the Montreal protocols, so called. There is a time limitation for debate on those measures. The vote on the Montreal Protocols, however, will occur on Tuesday, according to the order previously entered. There may be other Executive Calendar business to transact on Monday. It is anticipated, however, that if that is the case, a vote on any such item, if a rollcall vote is ordered, also would occur on Tuesday. There is no order to that effect, but that is the expectation of the leadership.

Mr. President, there is already an order entered that, at the conclusion of the remarks of the distinguished minority leader on the history of the Senate, the Senate will stand in recess until tomorrow.

UNANIMOUS CONSENT AGREEMENT—NOMINATION OF LEWIS ARTHUR TAMBS

Mr. President, as in executive session, I would like to propound an additional unanimous-consent request for the consideration of the minority leader. There is one other item of executive business, that is the nomination of Lewis Arthur Tambs, of Arizona, to be Ambassador Extraordinary of the United States to Colombia.

Mr. President, I ask unanimous consent that on that nomination there be a time limitation of 1 hour, equally divided, to be controlled by the distinguished chairman of the Foreign Relations Committee and the distinguished ranking minority member of the Foreign Relations Committee; that that debate occur on Monday next, to follow immediately after the conclusion of the debate on the Montreal protocols, as previously ordered.

I further ask unanimous consent that a rollcall vote on that nomination, if such is ordered, occur on Tuesday, to follow on after the vote previously ordered on the Montreal Proto-

cols without intervention, debate, motion, or point of order.

Mr. BYRD. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. I thank the minority leader for this additional agreement. He has been most helpful, as have Members on his side of the aisle, in expediting the transaction of business that the Senate must attend to. We have kept a pretty clean calendar so far, both the Executive Calendar and the Legislative Calendar. I urge all Senators to take a look at them now because my hunch is they will not stay that way very long.

Mr. President, I thank the Senator for yielding to me so we could transact this business.

Mr. DOLE. Mr. President, will the majority leader yield?

Mr. BAKER. Yes; I yield.

Mr. DOLE. Mr. President, I am not sure, maybe it has already been called to the Senate's attention, but we did report out the nominations of Margaret Heckler to be HHS Secretary and Jack Svahn to be Under Secretary today in our Finance Committee. Is there any chance to act on those this week, or are we in session on Friday?

Mr. BAKER. Mr. President, to answer the Senator from Kansas, we will not be in session on Friday. We will be in session tomorrow, Thursday.

Let me inquire of the minority leader and also check our own clearance process. I would personally like to do that as soon as possible.

ORDER FOR RECESS UNTIL 10:30 A.M. TOMORROW

Mr. BAKER. Mr. President, if the minority leader will yield to me further, it has been called to my attenton that we have a scheduling glitch; that tomorrow we are scheduled to convene at 9:30, I believe, and we also have an order to go to the treaty at 12 noon. There are five special orders, plus, of course, the standing order for the recognition of the two leaders. But it seems to me that that leaves too much time, perhaps, for the transaction of routine morning business.

If the minority leader has no objection, I ask unanimous consent that the time for the convening of the Senate be advanced tomorrow from 9:30 a.m. until 10:30 a.m. and that the balance of the arrangements for the legislative schedule tomorrow remain intact.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. I thank the Chair and I thank the minority leader.

Mr. BYRD. I thank the majority leader.

(Conclusion of the later proceedings.)

THE UNITED STATES SENATE

THE SENATE DURING THE CIVIL WAR, 1859-1865 (Part I)

Mr. BYRD. Mr. President, although it seems like only yesterday, twenty years have passed since this nation commemorated the 100th anniversary of the tragic and costly American Civil War. During that centennial we witnessed stirring reenactments of major battles, viewed moving television documentaries, and read an increasingly large number of books on the war, a topic that has fascinated generations of Americans. The story of that bloody conflict traditionally has been told from the perspective of that giant among American presidents, Abraham Lincoln. From his clandestine entrance into the nation's capital on that grim February day in 1861 through his frustrations with his indecisive generals to the Emancipation Proclamation and the Gettysburg Address we have followed his tortuous path. That path leads us to Lee's dramatic surrender to Grant at Appomattox Court House and finally to the monumental tragedy that unfolded in the box above the stage at Ford's Theater on the night of Good Friday, April 14, 1865. At the end of Lincoln's four year, soul-wrenching quest, the blast of an assassin's bullet denied him the peace and satisfaction he so richly deserved.

Yet, Mr. President, there is another perspective from which to view the war that divided our nation and took the lives of more than 600,000 of our forebears. While Lincoln agonized over matters of pressing military strategy, Congress was hard at work shaping and passing legislation that would set the nation's course for the remainder of the 19th century and beyond. In 1863, freshman Senator John Sherman of Ohio wrote to his brother, Union General William Tecumseh Sherman, "the Senate has become a laborious committee, where bills are drawn as well as discussed." [1] Though Senator Sherman grumbled over the Senate's new role, in fact during the crucial early years of the Civil War, the Senate had decisively assumed the initiative in devising major legislative proposals, rather than simply acting in response to a presidential program.

In my last address I concluded with the session of January 4, 1859, during which the Senate moved as a body out of the old chamber down the hall which it had outgrown and, in a double file procession, into this very room. Much earlier in my series of statements, I described in detail the appearance of the new chamber with its sixty-four desks arranged in three rows in a room that seemed to its first occupants to be excessively large, poorly ventilated, and acoustically difficult.

As senators settled into their new chamber, profound political changes were underway. The recently concluded elections of 1858 had greatly benefited the newly emerging Republican party. It had achieved victories in every northern state except Illinois and Indiana. Although Abraham Lincoln failed in his bid to capture Stephen Douglas' Senate seat, most Republican candidates fared much better. Republicans won governships, gained majorities in state legislatures, took control of the U.S. House of Representatives, and increased their numbers in the Senate. That party's gains occurred as a result of a severe economic depression, adverse public feeling over the Dred Scott decision, which had the effect of opening the territories to slavery, and frustration at the weakness of the Democratic administration of President James Buchanan.[2]

During the remaining two months of the 35th Congress, early in 1859, the Senate accomplished little. The growing impasse between North and South ensured the northern senators' hostility to administration proposals for purchasing Cuba from Spain and establishing a protectorate over northern Mexico. Southern senators, for their part, blocked bills for an increased tariff, a transcontinental railroad, and river and harbor improvements. Southerners and land speculators killed a Homestead bill that would have allowed the head of every family to purchase 160 acres of western land for $1.25 per acre, fearing that it would have filled the West with anti-slavery settlers. Both Houses did pass Vermont Representative Justin Morrill's bill to establish land grant colleges in each state in order to spread educational opportunity more broadly across the citizenry. Unfortunately, President Buchanan believed that federal support of education was unconstitutional and vetoed the measure.[3]

When the Senate of the 36th Congress convened on December 5, 1859, sectional tensions had escalated far beyond the ability of legislative leaders to control them. "We are," wrote southern partisan Virginia Clay, wife of Alabama Senator Clement Claiborne Clay, "dancing over a powder keg." Three days earlier, in Charles Town, Virginia, the infamous John Brown, whose raid had helped ignite the slow burning fuse of that powder keg, was taken from his jail cell into the bright December morning sunshine. Awaiting him were six companies of Virginia infantry and a troop of horse cavalry. Brown was quickly escorted to an open wagon containing a heavy oak coffin. Seated next to his jailor, Brown rode slowly away to the forty acre field that had been chosen

Footnotes at end of article.

as the site for his execution. There, he discovered additional troops massed in a hollow square with a cannon directed at the scaffold to discourage those who might attempt to rescue him. Mounting the scaffold, Brown bade farewell to his captors and stood impassively erect as a hood of white linen was placed over his head, and a rough noose was pulled about his neck. The condemned man then moved onto the trap door and signaled his readiness. For eight long agonizing minutes, John Brown waited in silence as late arriving troops moved into their preassigned positions. Finally, the sheriff slashed the rope that held the trap. Hinges creaked and boards fell. John Brown swiftly went to his martyrdom.[4]

John Brown's abortive attempt to seize the federal arsenal at Harper's Ferry in October 1859 swept the South into a state of panic. Brown's action confirmed white southerners' deepest fears of an imminent plot by the North to invade their lands, with weapons taken from government arsenals, inciting the region's three million slaves to bloody revolt. His deed provided justification for the longstanding warnings of radical leaders. When more moderate leaders called for the North to disavow Brown, they received instead, from the pens of Emerson, Thoreau, Whittier and others, a literary response elevating the tragic old man to heroic status.

I would advise my colleagues and members of the staffs when the opportunity presents itself to visit Harper's Ferry and see some of the historical buildings there which have been rehabilitated, the exhibits that are there, and also to visit Charles Town, which is located in what is now West Virginia. The old court house still stands, and it is not far away from Harper's Ferry. It will provide an interesting, informative, and inspirational afternoon or entire day for anyone who proceeds to visit Harper's Ferry and Charles Town and relives the rich history of that period.

In December 1859, the first order of business for the new 36th Senate was a resolution establishing a committee to investigate possible conspiracy in connection with Brown's raid. On the following day, the Senate approved the resolution and got down to work for what proved to be a frustrating and unproductive session. Tensions among northern and southern senators escalated rapidly. The growing legislative stalemate that Congress faced as 1860 dawned was most dramatically revealed on the other side of the Capitol in the House of Representatives.

There, the sectional crisis took its focus in a bitter battle to elect a Speaker. John Sherman of Ohio, a moderate on the slavery issue, was the favored candidate. However, he had unwisely endorsed a book he never read. That volume, Hinton Rowan Helper's *The Impending Crisis*, caused an explosion of outrage in the South similar to that of John Brown's raid. Helper concluded in his 1857 tract that "slavery lies at the root of all the shame, poverty, ignorance, tyranny and imbecility of the South," impoverishing all but "the lords of the lash who are not only absolute masters of the blacks (but) of all non slaveholding whites, whose freedom is merely nominal, and whose unparalleled illiteracy and degradation is purposely and fiendlishly perpetuated." Sherman's support of the book cost him essential votes of border state members and the speakership contest dragged on for eight weeks. Members hurled insults at one another and the House chamber took on the appearance of an armed camp. One witness noted that "the only persons who do not have a revolver and a knife are those who have two revolvers." Finally, on the forty-fourth ballot, Sherman withdrew and an unknown New Jersey freshman, William Pennington, became Speaker.[5]

During the first half of 1860, senators focused their attention on the presidential nominating conventions. Democrats assembled in April at Charleston, South Carolina. When supporters of front running candidate Stephen Douglas succeeded in passing a platform plank opposing federal protection of slavery in the territories, delegates of eight southern states walked out—not something unheard of, even in our own recent times.

This led to a stalemate and then an agreement to reconvene the convention at Baltimore in June. Before the Democrats could meet again, Republican delegates assembled in Chicago. Going into that convention, Senator William Seward was the leading contender, but his drive faltered when it became clear that his strong anti-slavery record would alienate important border states. As we know, the nomination went to the former one-term House member from Illinois, Abraham Lincoln.[6]

On the heels of the Lincoln nomination, the Democrats met in Baltimore and promptly divided. The two wings of the party then nominated their own candidates, with Douglas receiving the nod from the northern faction and Vice President John Breckinridge of Kentucky that of the southerners. On November 6, 1860, Lincoln received a million fewer votes than the combined total of his divided opposition, but he captured a commanding majority of electoral votes. As the last session of the 36th Congress convened on December 3, 1860, senators looked to President Buchanan for a ray of hope in the darkening sky of secession threats. Buchanan, for his part, responded in a characteristically weak and vacillating manner. In his message to Congress, the president tried to placate all factions. Consequently, he satisfied none when he proclaimed that, while no state had the right to secede, neither did the federal government have the right to prevent such action. The president blamed Republicans and abolitionists for bringing on the crisis. Unless they stopped criticizing slavery and began to support the fugitive slave law, "disunion will become inevitable," and the South would "be justified in revolutionary resistance to the Government." The chief executive, clearly counting the days remaining in his disastrous term, recommended a constitutional amendment to protect slavery in the territories and the purchase of Cuba to give the South a new slave state.[7]

Both the House and Senate set up committees to examine a host of similar compromise proposals. In the Senate, the venerable Kentuckian, John Crittenden, who first came to this body in 1817, chaired a "Committee of Thirteen." Most of the compromise proposals called for abandonment of federal efforts to prohibit slavery in the territories. This prohibition was the basic principle behind the Republican party's formation and compromises based on its abandonment were certainly doomed to failure. On December 28, 1860, the Crittenden Committee voted, against the position of its chairman, to reject a package of constitutional amendments. The "Crittenden Compromise" included a plan to extend the Missouri Compromise line to California, permitting slavery south of that line and forbidding it to the north. Congress would be forbidden to abolish slavery in the District of Columbia and to interfere with the slave trade. The proposed amendments were intended to be irreversible for all time. When the package made its way to the Senate floor on January 16, 1861, it suffered a second and final defeat by a two-vote margin.[8]

A week before that crucial vote, Mississippi's senior senator, the elegant and aristocratic Jefferson Davis, rose to address the Senate. Mississippi had voted to leave the Union on the previous day; South Carolina had departed several weeks earlier; and Florida, Alabama, and Georgia were poised to take similar action. With his wife of sixteen years looking on from a packed gallery, the leader of the Democratic party's southern faction urged his Senate colleagues to allow the southern states to go in peace. He said:

> We seek not to disturb your prosperity. If we must part, I say we can put our relations upon that basis which will give you the advantage of a favored trade and still make the intercourse mutually beneficial to each other. If you will not, then it is an issue from which we will not shrink; for, between oppression and freedom, between the maintenance of right and submission to power,

we will invoke the Godbattles, and meet our fate, whatever it may be.

I have striven to avert that catastrophe which now impends over the country, unsuccessfully; and I regret it. If you desire at this last moment to avert civil war, so be it; it is better so. If you will but allow us to separate from you peaceably, since we cannot live peaceably together, then there are relations which may still subsist between us.

If you will not have it thus; if in the pride of power, if in contempt of reason and reliance upon force, you say we shall not go, but shall remain as subjects to you, then, gentlemen of the North, a war is to be inaugurated the like of which men have not seen.

Indeed, he was very prophetic in making that statement.

Is there wisdom, is there patriotism in the land? If so, easy must be the solution of this question. If not, then Mississippi's gallant sons will stand like a wall of fire around their State * * *.[9]

Two days later, New York Republican William Henry Seward rose to respond to Davis' appeal. Earlier he had proclaimed that the crisis would be over in sixty days. As Lincoln's Secretary of State-designate, Seward was marked to be a leader in the new administration—a prime minister almost. Far more experienced in the art of government than Lincoln, Seward exuded confidence as he addressed the Senate. Speaking in a raspy voice, irritated by excessive cigar smoking, Seward hoped to carry the day for moderation. Massachusetts Republican, Charles Sumner had tried to talk Seward out of giving the carefully prepared address. Sumner was furious with Seward's willingness to abandon his earlier strong anti-slavery position. Seward instead had devised a conciliatory offer to the South that included a constitutional guarantee that Congress would never interfere with slavery in any state and that the Arizona-New Mexico territory would be admitted as a slave state. Sumner argued that Seward's speech would undermine unionist support in the crucial border states. When Seward concluded his remarks to the Senate, it became clear that Sumner's fears were justified. His vague preachments antagonized radicals and disunionists alike. They even fueled a concessionist spirit in Sumner's own Massachusetts where merchants hoped that compromise would bring a resumption of vital cotton shipments from the South.[10]

Seward's address and the onrushing news of further defections among southern states set the stage for one of the most dramatic and memorable scenes ever to take place in this chamber. On January 21, 1861, five senators from Florida, Alabama, and Mississippi entered this chamber to bid their colleagues a sad farewell. Spectators began to press for admission to the galleries at 7:00 a.m. By 9 o'clock the galleries were packed, and so were the cloakrooms and the Senators' Lobby to the north of the chamber. The reporters gallery in front of me was given over to members of the diplomatic corps and their families.[11]

Mrs. Jefferson Davis observed that there was a sense of "blood in the air" as the Senate chaplain took his place at high noon. Following a brief period of routine morning business, a motion was made to take up a bill for the admission of Kansas as a free state. At that point Florida's David Yulee sought recognition to ask that his announcement of withdrawal might be heard. Ben Wade of Ohio, a leader among radical Republicans who reportedly kept a sawed off shotgun in his Senate desk, pretended not to know why the Florida senator sought the floor. The Kansas matter was deferred and the long awaited valedictories began. Jefferson Davis reserved the final position among his departing colleagues for himself.[12] Reiterating his plea for a peaceful separation, the senator, weakened by a recent illness, called out to his colleagues.

I am sure I feel no hostility toward you, Senators from the North. I am sure there is not one of you, whatever sharp discussion there may have been between us, to whom I cannot now say, in the presence of my God, I wish you well; and such, I am sure, is the feeling of the people whom I represent toward those whom you represent.

I, therefore, feel that I but express their desire when I say I hope and they hope for peaceable relations with you, though we must part. They may be mutually beneficial to us in the future, as they have been in the past, if you so will it.

The reverse may bring disaster on every portion of the country, and if you will have it thus, we will invoke the God of our fathers, who delivered them from the power of the lion, to protect us from the ravages of the bear; and, thus putting our trust in God and in our firm hearts and strong arms, we will vindicate the right as best we may * * *.

Mr. President and Senators, having made the announcement which the occasion seemed to me to require, it only remains for me to bid you a final adieu.[13]

When he finished, those in the chamber remained silent, but for the sound of general weeping. Then, as Davis started his final journey up the center aisle with his four compatriots falling in closely behind, Vice President Breckinridge rose to his feet. Fifty-eight senators followed the presiding officer's lead. And so did the massed spectators. Slowly, the five senators removed themselves from the mournful chamber, not one casting a backward glance. Then doors swung shut and the Senate moved quietly to take up the pending business. Later that fateful evening, Mrs. Davis overheard her husband's prayer. The former senator prayed, "May God have us in His holy keeping, and grant that before it is too late, peaceful counsels may prevail." [14]

Following Davis' departure, the Senate approved the bill to admit Kansas as a free state sending it on to President Buchanan who earlier had proclaimed that Kansas should be as much a slave state as South Carolina. Buchanan reluctantly signed the measure.

During the remaining few weeks before the March 3 adjournment date, other southern senators withdrew as their states, eleven in all, approved ordinances of secession. In Springfield, Illinois Abraham Lincoln prepared for his long journey to assume the reins of a divided government in a capital city increasingly awash with rumors of conspiracy and sedition. On February 8, the seceding states sent delegates to Montgomery, Alabama to set up a provisional government and the following day elected former Senator Davis as their president.

Major events tumbled one after another. On February 11, Lincoln left Springfield and two days later counting of the electoral votes took place in the House chamber. On that occasion, soldiers barricaded entrances to the Capitol Building, turning away all but the favored few who held tickets of admission. Plainclothes policemen mingled attentively with those who walked the corridors. At noon, senators in solemn procession entered the House chamber. Led by Vice President John Breckinridge, members took their assigned places. Without incident, the tellers registered the vote. Then the vice president, himself one of the losing presidential candidates, announced that Abraham Lincoln had been elected the nation's sixteenth president.[15]

As Lincoln's train approached the capital, threats of violence increased. Private detective Allan Pinkerton had reliable information that the president-elect faced assassination when his train reached Baltimore, which was a hotbed of secessionist spirit. Accordingly, the president donned a disguise and slipped into Washington, unannounced, on an earlier train. For the remainder of his life, Lincoln deeply regretted that subterfuge.[16]

Inauguration day, March 4, 1861, dawned raw and windy in the capital. A spirit of depression gripped the city. The procession of presidents swept swiftly past boarded windows and up to Capitol Hill. At the Senate entrance, two batteries of light artillery were positioned. Through the north door, the presidential party moved to the Senate chamber, where Vice President Hannibal Hamlin and newly elected senators took their oaths. A few minutes later, the new president's high-pitched voice rang out across the east plaza as he proclaimed, "we are not enemies, but friends . . . Though passion may have strained, it must not break our bonds of affection."[17]

President Jefferson Davis called the Confederate Congress into session immediately. President Lincoln decided to wait. Although the next regular ses-

sion was not due to begin until December 1861, the times demanded congressional consultation and action. Since the beginning of 1861, federal troops at Fort Sumter in the harbor of Charleston, South Carolina had been under seige of shore batteries. No solution was in sight. At 4:30 a.m. on April 12, those very batteries opened fire on the hapless Union fort. The Civil War had begun.

After thirty-four hours of intense but bloodless bombardment, Major Robert Anderson yielded to the inevitable and surrendered the garrison. This action galvanized sentiment throughout the North for a swift and decisive end to the South's secession. On April 15, the president declared a state of insurrection existed and ordered a recruitment of 75,000 three-month volunteers.

Meanwhile, dust gathered in the quiet Senate chamber. Fearing that Maryland would join the rebellion, thereby isolating the capital from northern military support, Lincoln ordered defensive preparations. By early April, the Capitol Building appeared ready for the onslaught. Boards, and boulders, and casks of cement barricaded the entrances. Paintings and statuary were draped in protective coverings. Iron plates, awaiting placement in the half completed dome, were pressed into service as breastworks on the porticoes.[18] On April 17, meeting in Richmond, Virginia's convention voted to remove that state from the Union. Fears of isolation skyrocketed.

Two days later, a regiment of troops from Massachusetts engaged in pitched battle as they tried to pass through hostile Baltimore. The timing of that incident, which took four dead and thirty-one wounded, was not lost on supporters of the Union. The fateful skirmish occurred on April 19, exactly eighty-six years after the encounter between the colonials and the British at Lexington and Concord. The badly mauled Sixth Massachusetts Regiment arrived in Washington on the afternoon train. As litters were removed, a group of Washington women rushed forward to dress the soldiers' wounds. In the lead was a young Patent Office clerk named Clara Barton. Tried and exhausted, the troops and their medical attendents headed for the only available room suitable to their needs—the vacant Senate Chamber.[19]

Each soldier received a ration of bacon, bread, and coffee. As fumes of cooking food drifted upward from furnaces in the basement, the men of the Sixth Massachusetts made themselves comfortable in this very room. Passions ran deeply as the wounded and hungry troops converted gallery seats and senators' chairs to temporary resting places. One enraged soldier sought out former Senator Jefferson Davis' seat, the one now occupied by the distinguished senior Senator from Mississippi, Mr. Stennis, two desks back from here. With his bayonet unsheathed, the man sought to destroy the stately desk. At that juncture, according to Senate lore, the venerable assistant doorkeeper of the Senate, Mr. Isaac Bassett, rushed forward to restrain the angered soldier.[20] Exhorting him to cease, he announced that the desk belonged to the government of the United States and not to the departed confederate chieftain. The soldier withdrew; and even today, if we look carefully along the right-hand front corner of that desk, we can detect the skilled carpenter's efforts to erase this sad incident.

Soon, the encamped soldiers grew restless. In the Marble Room to our north, they hung sides of bacon, stripping off portions to cook in that room's blazing fireplaces. Back in this chamber, they held mock legislative sessions, reminiscent of those conducted by invading British troops in the old House chamber in 1814. A self-appointed presiding officer called for order, only to be shouted down by throngs in the galleries. Pompous speeches were greeted with raucous applause and shouts of derision. Some sat at senators' desks as they composed letters to loved ones on Senate stationery, using franked envelopes to send the notes on their way.[21]

To feed the troops quartered in the Senate chamber, as well as those temporarily bivouacked in the rotunda, the House chamber, and in government buildings throughout the city, the military quartermaster constructed bread ovens in small brick-walled rooms throughout the Capitol basement. Huge barrels of flour were rolled down planks placed over the west central interior staircases

The sense of seige and isolation that had gripped Washington in March and April diminished with the arrival of fresh troops and the realization that an attack by southern forces was not imminent. As members of the Senate returned for the special Independence Day session, they found a more relaxed attitude among the city's residents. They also found a cleansed chamber. After their brief stay, the men of the Sixth Massachusetts Regiment were moved to other quarters. Soap and sand removed the grease and tobacco stains that served as the temporary occupants' legacy.

At twelve noon, on July 4, 1861, Vice President Hannibal Hamlin rapped the ancient Senate gavel. Reverend Byron Sunderland, in his opening prayer, observed that Independence Day in 1861 was "a day tenfold more precious by reason of our present troubles and sacred to the heart for the ever memorable Declaration of our fathers." As the vice president looked out into the chamber, he must have been deeply moved by the spectacle of twenty-one vacant seats. Among the senators of the eleven states of the Confederacy, only Tennessee's Andrew Johnson remained.[22]

The Senate of the 37th Congress was dramatically different from its predecessor as a result of the southern defections and the 1860 election. For the first time in its brief history, the Republican party gained control of the Senate outnumbering the Democrats by a margin of 31 to 10, with eight members claiming other party affiliations. During that session, the size of each party fluctuated slightly as members came and went, but the Democratic members recognized that they were badly outnumbered. In the days ahead, their rate of absenteeism grew and they never bothered to hold formal caucuses.[23]

Mr. President, one measure of the dramatic change in the Senate's composition during the early years of the Civil War can be taken from the manner in which it confronted the definition of membership for senators of the secessionist states. For the balance of my remarks today, I shall discuss the Senate's Civil War expulsion cases of 1861 and 1862. They reveal a great deal about the nature of this institution during those uniquely troubled times.

The moment Jefferson Davis and his four southern colleagues departed in January 1861, the Senate began the long process of deciding on the status of members who formally resigned, as well as of those who simply did not bother to appear at the start of the 37th Congress in March, and of those still serving whose sympathies appeared to lie with the Confederacy. Senators grappled with four basic issues related to this dilemma: The difference between withdrawal and resignation; the permanent or impermanent quality of the withdrawals; the subsequent status of committee memberships; and the underlying uncertainty over the legality of secession. That not all southern senators acted in the same manner or at the same time compounded the discussions. One Georgia senator, Robert Toombs, withdrew without sending formal notification to the Senate. The South Carolina senators, James H. Hammond and James Chestnut, announced their plans through home state newspapers, but never communicated with the Senate itself. In the Senate, perplexed members sought to use the language of the Constitution as a guide for identifying the proper responses to the peculiar situation. Unfortunately, no common agreement emerged in the constitutional interpretations and the senators continued to flounder for definitions of the offense, if any, that had been committed. Two motions, one to rule that the withdrawing senators were no longer members of the

Senate, and a second to declare their committee seats vacant, were ordered to lie on the table.

On March 4, 1861, a new Republican majority assumed control of the Congress, but it demonstrated no clear notions about how to handle the secession crisis. When the Senate again considered the dilemma of the southern senators, so much anger and sadness permeated the speeches that a troubled Senator James Bayard advised, "All I ask . . . is, to leave the question undisturbed . . . unless it be the desire of . . . the Senate to complicate the affairs of the country, already sufficiently complicated; to irritate passions already sufficiently aroused; and to afford additional chances for the utter destruction of the Union, when it is already sufficiently endangered." The Delaware Democrat's advice struck a sensitive chord, for the Senate rejected a resolution that declared the offenders had ceased to be members of the Senate. Instead, the Senate voted to pronounce the seats vacant and to direct the Secretary of the Senate to omit those names from the roll. This resolution applied to Albert G. Brown, Jefferson Davis, Stephen R. Mallory, Clement Clay, Robert Toombs, and Judah Benjamin. It did not apply to David Yulee, Benjamin Fitzpatrick, Alfred Iverson, or John Slidell because their Senate terms expired March 3, 1861, the day before the new Republican Congress convened.

The debate over senatorial withdrawal marked only the first of many constitutional disputes surrounding the major issue of secession. Each southern senator justified withdrawal upon the argument that when a state left the Union, the necessity for senatorial representation ended. Acceptance of the right to withdraw and to disassociate a state from the national legislature acknowledged the legitimacy of secession. However, by a declaration that the seats were merely vacant, the Senate denied the act of secession by implying that at any time a new senator with legitimate credentials could represent the state.[24]

In April 1861 the Senate could no longer hope that the southern legislatures would appoint new senators to fill the vacant seats in the chamber. Most southern legislators simply remained in their home states. When Congress reconvened in July 1861, with open warfare in progress, the Senate found itself with only a partially resolved problem, as it had earlier addressed the matter of just those senators who had actively withdrawn their membership.

The status of Arkansas' William Sebastian and Charles C. Mitchel, North Carolina's Thomas Clingman and Thomas Bragg, South Carolina's James Chestnut, Tennessee's A.O.P. Nicholson, Texas' John Hemphill and Louis Wigfall, and Virginia's James M. Mason and Robert M. T. Hunter remained murky. An earlier attempt to expel Louis Wigfall for his public declaration that he had become a foreigner and owed no allegiance to the United States government failed in March 1861 when the Judiciary Committee failed to return a report on its deliberations. South Carolina's James Hammond made a public withdrawal in the state newspapers, but since his term expired before the 37th Congress convened, no action was taken on his case. One Tennessee senator, Andrew Johnson, a staunch Unionist, refused to follow the secessionists and served in the Senate until 1862 when he resigned to become the military governor of that state at Abraham Lincoln's request.

On July 10, 1861 Senator Daniel Clark, a New Hampshire Republican, submitted a resolution for the expulsion of the ten southern senators. Clark based his request on a charge that all the named senators participated in a conspiracy against the peace and union of the United States government. Clark pointed to the failure of these senators to appear in the chamber and their active involvement in the conspiracy itself. He reminded members that those senators not named in his resolution has been dealt with during the March session. With the passage of the Clark resolution the status of all southern senators would be clarified.

As in the March debates, it was Bayard of Delaware who rose to the defense of the southern senators and to urge moderation. He opposed the expulsion measure, arguing that the southern senators followed the directions of their states and that no senator individually had conspired against the government. Bayard suggested that the expulsion rule should be reserved for individual acts of misconduct. To formally expel the southern senators would only exacerbate an already inflamed situation. Senator Milton Latham of California supported his fellow Democrat because he felt expulsion implied moral turpitude, a stain upon the personal character of the individuals that most would agree was unjust.

But the passions of war produced more fervent arguments from those on the other side of the debate. Senator Clark retorted that he failed to admire the "openness" of the absent senators, and he hoped the Senate would not repeat its tame action of the March session. "They have taken up arms against the Government," Clark declared, "their guns are now within the sound of your capital; and shall we sit here in the Senate and deliberate and doubt whether we shall turn out of this Senate the very men who are ready to explode those guns against your capital? . . . let them be ejected from the councils of the nation." Near the conclusion of the arguments Senator James McDougall turned aside the cautions of his colleague from California when he dryly noted that there might be no moral turpitude in their actions because, "Treason was always a gentlemanly crime . . . However, it is none the less a crime . . . No man has a right to a place on this floor who espouses a cause adverse to the Government."

Senator Latham made one last effort to temper the expulsion movement. He suggested that the southern senators be equated with United States Army officers whose names were dropped from the rolls when they resigned from the Union forces at the outset of the war. The mood of the Senate would not hear of it. The ten senators were expelled by a vote of 32 to 10 on July 11, 1861.[25]

Among Kentucky's political leaders none enjoyed a more illustrious national career than John C. Breckinridge, who held the offices of representative, senator, and vice president. Breckinridge's Senate term started on March 4, 1861, as Abraham Lincoln began his administration and southern states' determination to secede crested. A defender of the South on the Senate floor, Breckinridge personally hoped that secession could be stopped. By the fall of 1861, it became apparent that the secession movement was a reality and that Breckinridge's support of its proponents made his position in Washington untenable. The Kentucky senator hastily departed for Richmond. Though Kentucky, truly a border state with a population torn by divided loyalties, was forced to remain in the Union, Senator Breckinridge chose otherwise and pledged his allegiance to the Confederate forces.

Versed in the protocol of the Senate from his service as vice president, Breckinridge, unlike many other senators who followed the Confederacy, sent a formal letter of resignation to the Senate. On December 4, 1861 Senator Zachariah Chandler, Republican of Michigan, entered a brief resolution of expulsion.

A short discussion followed in which Illinois Republican Lyman Trumbull inquired of Breckinridge's Kentucky colleague, Lazarus Powell, if a rumor that Breckinridge had become a general in the Confederate Army was true. Powell weakly attempted to avoid a direct answer, but finally confirmed that Trumbull's information was correct. Breckinridge's acceptance of a prominent military position in the Confederacy compelled Trumbull to ask the resolution state, "whereas Breckinridge, the traitor, had joined arms with the enemies of the government," he be expelled from the Senate. On this resolution Breckin-

ridge was expelled by a 36 to 0 vote on December 4, 1861.

In earlier expulsion cases, friends of the South argued that the Senators should not be penalized for the secessionist decisions of their state governments, but only for their own individual misconduct. As long as southerners did not take up arms against the United States government, their supporters maintained they did not deserve the censure of their colleagues. In the case of John Breckinridge, with Kentucky a Union state and the senator an officer in the Confederacy, southern sympathizers were caught upon the horns of their own argument.[26]

The political climate of Missouri erupted as the nation moved toward Civil War in the early months of 1861. Bitter fighting resulted when secessionists and unionists clashed in vicious encounters. Efforts to force Missouri to remain in the Union succeeded, but at the cost of heavy casualities on both sides. During these events the behavior of both senators, Trusten Polk and Waldo P. Johnson, fortified the Missouri secessionists and irritated many of their Senate colleagues. Blatant support for the South voiced by members from a Union state demanded a response.

On December 10, 1861 president pro tempore Solomon Foot, a Vermont Republican, asked for the expulsion of Waldo Johnson based on the Missourian's sympathy for and participation in the rebellion. A week later Senator Charles Sumner called for the expulsion of Trusten Polk as a traitor. Although the dates and the wording of the resolutions differed slightly, the Missouri situation essentially represented one case, and was an extension of the earlier expulsions of July.

General floor discussion about the Missouri senators took place on both December 12 and December 18. In the debates earlier in the year, fervor carried the day and the expulsion question moved to a vote without first going to committee. By mid-December, however, senators retreated to their traditional concerns for evidence, form, and precedent. Senators James McDougall and James Bayard urged that correct procedures be followed. McDougall acknowledged that in the July cases he supported an immediate vote on the expulsions. However, in this case neither a dispute over the facts nor a necessity for unseemly haste existed. McDougall reminded the Senate that in such a serious matter the rules should be followed closely, for the members had no way of knowing how often and by whom resulting precedents might be invoked in the future.

Senators who opted for immediate action highlighted the point that neither Missouri senator had appeared at any time during the year to claim his seat. As the thought of the Senate and the expulsion activities had been widely publicized, Republicans argued that the missing members might have made some effort to communicate with those in Washington. Their failure to do so confirmed the unofficial information that Johnson held an officer's position in the Confederate Army and that Polk wrote public letters urging Missouri to join the southern cause. Nonetheless, the Senate sent the matter of the Missouri senators to the Judiciary Committee.

On January 9, 1862 that committee substantiated all the charges made against Johnson and Polk. Both had secretly crossed into rebel territory and sworn an oath of allegiance to the Confederate government. Satisfied that neither demonstrated the slightest interest in answering the Senate charges and that both participated in secessionist war activities, the committee recommended expulsion. The Senate expelled Waldo Johnson by a 35 to 0 vote and Trusten Polk by a 36 to 0 vote on January 10, 1862. In the expulsion of Johnson and Polk the Senate continued the trend established in the John C. Breckinridge case, resolved earlier in December. The Senate could not tolerate a situation in which the senators of a Union state gave open support to the enemy government.[27]

Mr. President, I shall now turn to the last occasion on which the Senate expelled one of its members. That event took place on February 5, 1862. In the 121 years since that time, there have been 15 additional efforts, but none has ended in formal expulsion.

Among the forty-four senators who remained after the southern states seceded, Jesse Bright of Indiana was the Senate's most senior Democratic member. A senator since 1845, Bright had earned a reputation for his knowledge of Senate rules and precedents and for his frank manner. He seldom avoided taking a firm position on sensitive issues, generally reaching a decision quickly with little regard for the long term consequences of his stands. Bright's colleagues regarded him as capable of unswerving friendship to those who shared his pro-slavery views and as "an enemy who knew how to inflict punishment" to those who did not. His principal antagonists were abolitionist Senators Charles Sumner and Morton Wilkinson. In recognition of his seniority, Bright had served as the Senate's president pro tempore in 1854, 1856, and 1860. During his tenure in that position, Bright saw to it that Sumner received no committee assignments.

Shortly after the inglorious rout of Union troops at the First Battle of Bull Run in July 1861, Thomas Lincoln, a Texas arms merchant, was captured by federal forces as he attempted to cross into Confederate territory. Lincoln's captors found, among his possessions, a letter, dated March 1, 1861. It was addressed to "His Excellency Jefferson Davis, President of the Confederacy" and bore the signature of Senator Jesse Bright. The brief document read as follows:

> Allow me to introduce to your acquaintance my friend Thomas B. Lincoln of Texas. He visits your capital mainly to dispose of what he regards a great improvement in firearms. I recommend him to your favorable consideration as a gentleman of the first respectability, and reliable in every respect.

In the following months before the Senate convened for the second session of the 37th Congress, Washington was rife with speculation as to Bright's likely fate at the hands of his Republic Senate colleagues. Over the years he had denounced those who equated abolitionism with loyalty to the Union. He believed that the rupture in the Union would be only temporary and that military force would have little effect in healing the break. Clearly, Bright was vulnerable in a Senate whose majority feared that southern sympathizers lurked throughout the highest councils of the national government.

On December 16, 1862, shortly after the Senate convened for the new session, Senator Wilkinson introduced a resolution providing for Bright's expulsion on grounds of disloyalty. The resolution was referred to the Judiciary Committee, which then consisted of five Republican and two Democratic members.

In his own defense, Bright argued that although he had written the letter, he did not specifically remember doing so because he had sent thousands of similar commendations on behalf of his friends and constituents. Early in his career, Bright had served as Thomas Lincoln's attorney and, in 1861, he felt it was only natural to introduce his friend to his former Senate colleague, Jefferson Davis. Bright contended that his letter followed the conventions of the day, using a polite form of address customary between two gentlemen. At the heart of Bright's defense was the question of the state of relations between the Union and Confederacy on March 1, 1861, the date of the letter. He argued that the break was then considered by no means irrevocable.

This seemed to be the weakest point in Bright's case. His opponents pictured Jefferson Davis as the arch-traitor who, in March 1861, was busily assembling arms for the Confederacy's April attack on the federal garrison at Fort Sumter. For Bright to introduce an arms merchant to Davis was, in their view, *prima facie* evidence of treason. They also focused on the wording of his letter, underscoring its subservient tone with references to "Your Excellency" and "your capital."

Where Bright's defenders agreed that he was guilty only of bad timing and indiscretion, his opponents charged that he violated his oath to defend the Constitution against foreign and domestic enemies.

The Judiciary Committee reported to the Senate on January 13, 1962. By a vote of 5 to 2, that panel found that the charges were *not* sufficient to justify expulsion. Debate in the Senate began a week later and continued intermittently until February 5, 1962. The most dramatic and damaging speech was by Charles Summer who demanded that the Senate purge itself of traitors. The decisive vote occurred on February 5, in a chamber filled to capacity with members of both houses and the public. During the proceedings, which lasted for five hours. Bright summarized his case, noting that the Republican caucus undoubtedly had already made the final decision. He spoke, he said, only to set forth his case for posterity. Upon completing his address, Bright gathered his belongings from his desk and walked out of the chamber. Moments later, the Senate, by a vote of 32 to 14, expelled him.[28]

Mr. President, Twenty-five southern senators serving in 1860 terminated their Senate service as a result of the Civil War. Of that number, one resigned before the Senate could expel him and four others had their terms expire in March 1861, so action against them was unnecessary. The remainder were expelled by formal resolution. Of the twenty-five, seven went on to serve with Confederate military forces, ten became members of the Confederate Congress, and eight occupied high posts in President Jefferson Davis' administration. The loss of such distinguished men from the United States Senate was but one further mark of the tragedy of the war that divided our Union.[29]

Of that war and the Senate's role in prosecuting it, I shall have more to say in my next address.

Mr. BYRD. Mr. President, I yield the floor.

RECESS UNTIL TOMORROW AT 10:30 A.M.

The PRESIDING OFFICER. Under the previous order, the Senate will now stand in recess until 10:30 a.m. tomorrow.

Thereupon, the Senate, at 2:17 p.m., recessed until Thursday, March 3, 1983, at 10:30 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 2, 1983:

THE JUDICIARY

Gregory Wright Carman, of New York, to be a judge of the U.S. Court of International Trade.

Shirley Wohl Kram, of New York, to be U.S. district judge for the southern district of New York.

DEPARTMENT OF JUSTICE

James W. Diehm, of the Virgin Islands, to be U.S. attorney for the district of the Virgin Islands for the term of 4 years.

HOUSE OF REPRESENTATIVES—*Wednesday, March 2, 1983*

The House met at 12 o'clock noon.

The Chaplain, Rev. James David Ford, D.D., offered the following prayer:

Gracious God, as we pray for justice and righteousness and peace, so may we also have the spirit to do the good works necessary to carry out Your holy words. May we not be bearers only of Your word of truth, but may we be doers also of the work that brings grace to the lives of those we serve. Help us to see the words of faith translate into deeds of love and compassion that we become Your messengers of peace to our land and world. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, D.C.,
March 2, 1983.

Hon. THOMAS P. O'NEILL, JR.,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I have the honor to transmit herewith a copy of a letter received from Mr. Thomas W. Wallace, Executive Director, New York State Board of Elections, indicating that the Honorable Gary L. Ackerman is the apparent winner of the Special Election held on March 1, 1983, for the Office of Representative in Congress from the Seventh District of New York.

With kind regards, I am,

Sincerely,

BENJAMIN J. GUTHRIE,
Clerk, House of Representatives.

STATE BOARD OF ELECTIONS,
Albany, N.Y., March 2, 1983.

Hon. EDMUND L. HENSHAW, JR.
Clerk of the House of Representatives, Capitol, Washington, D.C.

DEAR MR. HENSHAW: Please be advised that the State Board of Elections has been notified by telegram sent by Betty Dolen, Executive Director of the New York City Board of Elections, that Gary L. Ackerman, who resides at 65-47 169th Street, Flushing, NY 11365 is the apparent winner of the special election held on March 1, 1983 for the office of Representative in Congress, Seventh Congressional District of New York.

Attached hereto is a copy of Mrs. Dolen's telegram which sets forth the vote received by all candidates in the contest.

Very truly yours,

THOMAS W. WALLACE,
Executive Director.

[Telegram]

NEW YORK, N.Y.
March 2, 1983.

Hon. THOMAS W. WALLACE,
Executive Director, New York State Board of Elections, Albany, N.Y.

Please be informed that the Honorable Gary L. Ackerman is the apparent winner in the special election held on March 1, 1983 to fill the vacancy in the 7th Congressional District in New York City. The votes recorded and received by the candidates are as follows: Democratic and Liberal Parties Gary L. Ackerman, 18,380; Republican, Conservative, and Right to Life Albert Lemishow, 8,303; Queens Independent Party Douglas E. Schoen, 5,983; Neighborhood Service Party Sheldon S. Leffler, 4,347. The official canvas is expected to be completed by March 8, 1983.

BETTY DOLEN,
Executive Director.

SWEARING IN OF HON. GARY L. ACKERMAN OF NEW YORK AS A MEMBER OF THE HOUSE

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that the gentleman from New York, Mr. GARY L. ACKERMAN, be permitted to take the oath of office today. His certificate of election has not arrived, but I do have in my hand a telecopy of a certificate signed by the executive director of the State Board of Elections in New York. There is no contest and no question has been raised with respect to his election.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER. Will the gentleman from New York, the new Member, kindly step forward into the well and will he be escorted by the New York delegation?

Mr. ACKERMAN appeared at the bar of the House and took the oath of office.

The SPEAKER. The gentleman is a Member of the Congress of the United States, and congratulations.

SOCIAL SECURITY SCAM

(Mr. MICHEL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

The SPEAKER. The Chair wants to wish the gentleman a happy birthday today.

Mr. MICHEL. Well, I thank the Speaker.

The SPEAKER. Perhaps it should be brought to the attention of other Members later in the day.

Mr. MICHEL. Oh, fine, thank you. May I have a moment at this time?

The SPEAKER. The Chair has recognized the gentleman.

Mr. MICHEL. I thank the Speaker for acknowledging me first, even though after making my remarks he may not be all that happy that he did so.

Yesterday I received a letter in the mail, Mr. Speaker, which read:

> The next few weeks are critical to the future of social security. Vote in Congress could come in a matter of weeks. Democratic party must mobilize millions of Americans to see that progress made so far is not undone.
>
> At this moment Claude Pepper and other Democratic leaders on Capitol Hill are working night and day to draft and enact fair social security legislation.

Obviously, those are not my words, Mr. Speaker. They come from the Democratic National Committee's latest soak-the-seniors fundraising campaign. How the Democratic National Committee can in good conscience conduct such a scam just defies imagination.

Those truly interested in saving social security in this body have tried to cooperate in the formulation of a program that will require full public support and backing. You do not get that backing by swindling people.

If the Democratic leadership is sincere about saving social security, then they ought to insist that the scam be scrapped immediately.

That is what I had to say today on my birthday, Mr. Speaker.

The SPEAKER. Very good.

HAPPY BIRTHDAYS

(Mr. WRIGHT asked and was given permission to address the House for 1 minute.)

Mr. WRIGHT. Mr. Speaker, I had thought to do this to observe that today is the 60th birthday of the distinguished minority leader, BOB MICHEL, and to remark that great character sometimes is indicated by the date of one's birth.

March 2 is also the 190th anniversary of the birth of Sam Houston, the only one ever to serve as Governor of two States and citizen of five nations,

if you count the Cherokee Nation as well; so you have a ways to go, but you are almost there.

There was a time not so long ago when I thought that if I ever got to be 60, I would step aside and let a younger man take over, but I no longer feel that way.

Happy birthday, BOB.

Mr. MICHEL. I thank the gentleman.

OPPOSITION TO PROPOSAL FOR DECONTROL OF NATURAL GAS

(Ms. KAPTUR asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. KAPTUR. Mr. Speaker, I am opposed to the Reagan administration's proposal to decontrol all natural gas prices over the next 3 years. According to many analysts, such action could cause a surge in consumer bills by as much as 70 percent over the next 4 years, or $1,000 in additional costs for each family. This is totally unacceptable.

Constituents of mine are already unable to bear the burden of constantly rising natural gas prices. One Toledo family, which has done everything conceivable in terms of insulating its home and conserving natural gas, sent me its gas bills for 1971, 1980, 1981, and 1982. This family is now paying almost five times more for heating than it did in 1971. We cannot support a proposal which would only exacerbate this already intolerable situation.

President Reagan's plan does not protect consumers against sudden price increases. He relies on the Federal Energy Regulatory Commission which has already approved billions of dollars of increases in natural gas costs.

We in Congress must band together against President Reagan's proposal now. We have an obligation to protect the American people against further increases and unfair competition in the gas industry.

HOUSE RESOLUTION CITING ANNE M. (GORSUCH) BURFORD FOR CONTEMPT OF CONGRESS

(Mr. SCHEUER asked and was given permission to address the House for 1 minute and to revise and extend his remarks, and to include extraneous matter.)

Mr. SCHEUER. Mr. Speaker, I have a matter of utmost importance to the House. I have today sent the following letter to the Honorable ROBERT W. KASTENMEIER, chairman of the Judiciary Committee's Subcommittee on Courts, Civil Liberties and the Administration of Justice. I would like to read the letter and place it in the RECORD.

MARCH 2, 1983.

DEAR MR. CHAIRMAN: I am writing to request that your subcommittee conduct an examination of the actions of the United States Attorney for the District of Columbia, Stanley Harris, and officials of the United States Department of Justice—including Attorney General William French Smith—with respect to the resolution approved by the House of Representatives on December 16, 1982 which cited Anne M. (Gorsuch) Burford for contempt of Congress.

It is well established that immediately upon passage of a contempt of Congress citation it is the duty of the United States Attorney promptly to commence prosecution by presenting the matter to a Grand Jury.

Contrary to practice, and his oath of office, Mr. Harris chose not to initiate prosecution.

Mr. Harris' failure to act raises serious doubts concerning his commitment to enforcing the law and raises even more disturbing questions regarding the role of the Department of Justice and the White House in this matter.

Direct intervention by White House officials, or direction dictated by the Attorney General or his subordinates, which can be proven to have resulted in obstruction of the proper legal pursuit of the Contempt citation, may indeed be impeachable offenses.

"Regardless of where the trail ultimately leads, Mr. Harris appears to have abused the legal process with regard to the prosecution of a contempt of Congress citation. If the evidence supports this, he may well bear culpability for thwarting and delaying legitimate requests for information by the legislative branch. It remains to be determined whether the culpability is solely his, or must be shared—along with the consequences—with others in the Administration."

Additionally, I would note published reports quoting J. Paul McGrath, Assistant Attorney General for the Civil Division, that there would be "no prosecution" of Mrs. (Gorsuch) Burford for contempt of Congress.

Rather than proceed with prosecution, the Justice Department actually filed suit against Congress.

These are extremely serious matters involving fundamental Constitutional powers; your attention to this request will be greatly appreciated.

With kind regards,

JAMES H. SCHEUER.

RESTORING MASS TRANSIT FUNDING LEVELS

(Mr. HOWARD asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. HOWARD. Mr. Speaker, if the rule permits, I intend to offer an amendment to the emergency supplemental appropriations bill to restore mass transit funding levels to the amounts agreed to by the House leadership and the administration.

Under that agreement, $400 million was to be provided for mass transit. Instead, the Appropriations Committee included only $110 million in its jobs bill with all of the funds earmarked for a handful of sites around the country. My amendment will restore the funding level to $400 million and will provide for equitable nationwide distribution of the money.

In the amendment, I am proposing a disapproval of the administration's proposed deferral of $229 million in gas tax money for mass transit in 1983. These funds will be distributed according to the formula in the Surface Transportation Assistance Act. Each State or locality receiving mass transit funds would receive about one-third of the total mass transit apportionment originally slated for 1983 or about one-half the amount published in the Federal Register of January 24, 1983, page 3303.

In addition, I am proposing to appropriate an additional $171 million for urban discretionary grants. None of these funds would be earmarked. All localities would be eligible.

I will be printing a copy of my amendment in today's RECORD. In addition, I will be placing a copy of my statement before the Rules Committee in today's Extensions of Remarks.

The amendment follows:

AMENDMENT TO THE COMMITTEE PRINT DATED FEBRUARY 25, 1983, OFFERED BY MR. HOWARD

Page 7, strike out line 20 and all that follows through line 2 on page 8 (relating to mass transportation) and insert in lieu thereof the following:

TO SPEED UP IMPROVEMENT OF MASS TRANSPORTATION

To accelerate the construction, modernization, and improvement of urban mass transportation systems, to increase the mobility of the urban work force which will result in productive jobs, an additional amount of $171 million, to remain available until expended, for Urban discretionary grants, to be obligated at the discretion of the Secretary of Transportation in accordance with section 3 of the Urban Mass Transportation Act of 1964.

The Congress disapproves the proposed deferral of budget authority in the amount of $229 million for the mass transportation capital fund—deferral numbered D83-59—as set forth in the President's special message which was transmitted to the Congress on February 1, 1983. This disapproval shall be effective on the date of enactment of this act and the amount of the proposed deferral disapproved herein shall be made available for obligation.

REAGAN'S "GUNBOAT DIPLOMACY"

(Mr. ALEXANDER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ALEXANDER. Mr. Speaker, the administration has been lobbying for stepped-up involvement in El Salvador ever since the first days in office of the former Secretary of State, Alexander Haig. Indeed, through all the changes in the Reagan team, this affinity for gunboat diplomacy is one of the constrants of administration policy.

Now the cry is raised once more—this time for $60 million dollars more and a sizeable increase in advisers. I have closely followed developments in Central America and I am skeptical there has been no call for joint action from our allies in the region—Mexico, Venezuela, and other nations in the Organization of American States. And to act in our own hemisphere without being part of a common policy is to create the unfortunate spectacle of a Gringo war.

With unilateral action, we risk the possibility that we are on the wrong side of this conflict. And the image of ourselves as the big brother of the Western Hemisphere is one which we should let recede into the past. Let us instead forge a new era of history in which, along with our Latin neighbors, we act as part of a concert of the Americas.

□ 1215

TEXAS BORDER TOWNS HURT BY MEXICO'S FINANCIAL CRISIS

(Mr. COLEMAN of Texas asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. COLEMAN of Texas. Mr. Speaker, I am deeply troubled by recent comments from administration officials concerning assistance to border regions of the United States that have been adversely affected by the Mexican economic crisis.

At the National Governors Association Conference this week, Commerce Secretary Malcolm Baldrige stated that the President has not planned any special assistance for communities across the Southwest that suffer from profound economic dislocation caused by foreign currency devaluation.

As my colleagues are well aware, the Government of Mexico continues to experience the worst economic crisis in its history as a result of decreases in oil prices, excesses in spending, and unrealistic growth predictions. The devaluation of its currency, the peso, has translated into economic disaster for all types of businesses from Brownsville to San Diego.

My constituents in west Texas bear the impact of this economic crisis every day. El Paso is one of the largest metropolitan areas on the border and a major shopping center for northern Mexico. Many commercial enterprises had become dependent on the Mexican market. Following the second devaluation of the peso in August of last year, the El Paso downtown business community has reported drops in sales of between 30 and 70 percent.

This rash of business losses is having a ripple effect on the rest of the city: Tax revenues are down, property values are endangered, credit ratings are weakened. This, in turn, affects business and banking interest around the country.

During the height of the crisis period, border businessmen contacted the Departments of Treasury and Commerce and found little leadership or direction. The Small Business Administration offered only reuglar loans and loan guarantees, which proved to be useless for the majority of ailing businesses because of high interest rates and quick repayment terms.

Having spoken to some other Members whose districts border Mexico, I realize that legislative and administrative relief are imperative for this crisis, and hope that other Members will join us in addressing this issue.

JOBS BILL IS ONLY A STOP-GAP MEASURE TOWARD RECOVERY

(Mr. OLIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. OLIN. Mr. Speaker, aside from preventing a nuclear war, the Nation's highest priority is to stimulate economic recovery and provide the opportunity for people to get back to work. The jobs bills the House is passing this week are a necessary part of that process. They will put people to work on needed projects. But they are at best a stop-gap measure. There is no way that these types of projects can put to work more than a small fraction of the 11 million unemployed.

Only true recovery can do it. In my view, the major factors still standing in the way of a recovery are abnormally high interest rates, unacceptable deficits, and lack of confidence in the future. Unless this Congress takes effective steps to cut the projected deficit in fiscal 1984 and beyond, we do not have a chance of achieving a real recovery.

I urge my colleagues to approach deficit reduction with the same resolve that they are showing on jobs measures. Only with the two approaches together can we achieve our real goal.

HELEN KELLER

(Mr. MRAZEK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MRAZEK. Mr. Speaker, the life of Helen Keller stands as a testimony to the possibilities available to those with handicaps who are given care and training, and not simply discarded by mainstream society.

We honored this potential in 1969 with the establishment of the Helen Keller National Center for Deaf-Blind Youths and Adults. Today, the center serves more than 40,000 deaf-blind Americans in its Sands Point, N.Y., center, 9 regional offices, and 20 affiliates. The center stands as the only specialized training and research center with the resources to meet the special needs of deaf-blind Americans. Its programs allow deaf-blind citizens to become functioning members of society, to establish a desperately needed sense of self-worth and to break free from the limited future of institutionalization.

The number of Americans suffering from these joint afflictions skyrocketed with the advent of a nationwide rubella epidemic in the mid-1960's. More than 6,000 infants were stricken in the epidemic, infants now reaching adulthood and in need of comprehensive services to prepare them for employment and self-sufficiency.

I am confident that the Helen Keller Center will provide these vital services. To insure its stability and survival, today I am introducing legislation to grant the center an independent statutory base similar to those now enjoyed by Gallaudet College, the American Printing House for the Blind and the National Technical Institute for the Deaf.

For the record, this bill entails no additional budgetary expenditures or taxpayer expense. It simply guarantees funding for an important national resource, and allows a sector of our society hampered by severe handicaps a chance to survive.

MILITARY AID IS NOT THE ANSWER FOR EL SALVADOR

(Mr. BATES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BATES. Mr. Speaker, I rise today to state my opposition to the Reagan administration's request to increase the fiscal year 1983 military aid authorization to the Government of El Salvador.

This request for an additional authorization of $60 million will raise the total authorization level to over $86 million for this fiscal year alone. History has shown that more money alone will not solve the problems of poverty and social injustice that are shredding the fabric of life of El Salvador. Rather this proposal will further exacerbate the problems that affect the people of El Salvador and other people in Central America.

El Salvador has not met the standards set for recertification of continued economic and political reforms and the seeking of a political resolution of the conflict. There still has been no action by Salvadoran authorities to bring to justice those responsible for the killing of four nuns in December 1980.

We should not attempt to buy allies, or prop up dictatorships. Human rights goals are paramount and the first tentative steps toward new elec-

tions must be encouraged—but not with more guns and military advisors.

I recommend that this body not approve increased military spending for El Salvador, but instead recognize the inevitability of a political settlement and call for immediate negotiation between all parties involved. Let us get on with the business of helping to build a safe, democratic nation with a genuine respect for human rights.

EDUCATION AND TRAINING OF UNEMPLOYED MUST FOLLOW JOBS BILL

(Mr. SIKORSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SIKORSKI. Mr. Speaker, I rise to call attention to the emergency relief legislation we will be voting on tomorrow, and to make note of one of the great ironies of 1983. The Republican President and numerous members of his party have swung over to the Democratic philosophy of necessary, basic human Government action to aid economic recovery. They have finally come to recognize the human tragedy that their unemployment has caused. They are beginning to see and feel the damage done to those people who have lost their jobs, homes—and hope.

It must not be forgotten this is a relief measure only. It represents just a first step toward assisting those suffering from economic depression. We must do more than provide humanitarian aid. We must insure short- and long-range jobs, education, and training for the jobs of the future. As John F. Kennedy said: "How can we save the few who are rich if we do not help the many who are disadvantaged?"

SALVADORAN LEADERS STRESS NEGOTIATIONS, NOT MILITARY AID

(Mr. OBERSTAR asked and was given permission to address the House for 1 minute and to revise and extend his remarks.

Mr. OBERSTAR. Mr. Speaker, today His Holiness, Pope John Paul II, begins an historical mission of peace to Central America, one of the most troubled regions in the world. Even as he begins his mission, our Government is preparing to seek another $60 million or more in military assistance to a repressive government and to broaden involvement of U.S. personnel as advisers to the Salvadoran military.

When I visited El Salvador a year ago, the Salvadoran military even said they did not want a broader involvement of U.S. personnel. The Bishop of El Salvador, Rivera y Damas, said that the most important thing to his country was to end the killing on both sides, and that increasing arms to the Salvadoran military will increase the resistance on the other side and innocent people will suffer.

Mr. Speaker, the enemies in El Salvador are ignorance, poverty, deprivation, and hunger. The people cry out for human rights. What we need is humanitarian assistance. What we need is a mission of peace that will stop the gunrunning on both sides and bring about a negotiated settlement.

PROPER TARGETING IS KEY TO THE JOBS BILL

(Mr. EDGAR asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. EDGAR. Mr. Speaker, I have two comments to make. First, I would like to applaud my colleague, the gentleman from Minnesota (Mr. OBERSTAR) for his remarks on El Salvador, and I associate myself with his remarks.

I would now like to address the House for a few seconds on the emergency jobs legislation that will be before the House in the next few days. A number of Members of the Congress on both sides of the aisle have had an opportunity to review the provisions of the jobs bill that the Appropriations Committee has put together to expend $4.6 billion to create jobs. Some of us, Democrats, Republicans, conservatives, and liberals, are concerned that the amount of money being spent is insufficient, but also we are concerned that it is not targeted very well.

I hope that all Members will look carefully at the jobs bill and analyze the amendments that may be permitted to be offered by the Rules Committee. One of those amendments will permit the opportunity to target the funds to areas of high unemployment. It would make sure that the targeting of those funds be mandatory and that those funds meets the certain criteria which focus on the pockets of poverty and helps us to have a real jobs bill rather than simply spending money on programs.

FURTHER INVESTIGATION OF EPA URGED

(Mr. BONER of Tennessee asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BONER of Tennessee. Mr. Speaker, today the EPA Administrator, Anne Burford, informed the HUD and Independent Agencies Subcommittee of the House Appropriations Committee that an investigation taking place within EPA could take money from programs that are vital to the quality of our environment. Today Mrs. Burford stated that she has recommended to the White House that EPA enforcement documents be made available for inspection to the Congress, and to this date the White House has restricted her from allowing her to do that.

Mr. Speaker, I believe that an independent investigator should be established to investigate any and all irregularities and improprieties within the EPA, and that a "blue ribbon" committee should be appointed to give renewed direction, integrity and credibility—to the EPA, and especially the Superfund.

CONGRESSIONAL TRIBUTE TO JOHN M. RAU

(Mr. BADHAM asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BADHAM. Mr. Speaker, it is with great personal pride and pleasure that I rise today to pay tribute to a distinguished American, John M. Rau of Orange County, Calif., whose term as national president of the Navy League of the United States ends on March 30, 1983.

Since taking office 2 years ago, John Rau has traveled over 300,000 miles around the world visiting Navy, Marine Corps, Coast Guard and merchant marine ships and facilities. He has sailed with the 6th Fleet in the Mediterranean, with a carrier battle group in the Indian Ocean, with the Coast Guard on interdiction missions in the Caribbean and icebreaking in the Antarctic, and has spent 2 weeks with the U.S. Marines on winter maneuvers in north Norway.

A native of Chicago, John saw service in the Pacific as a radio technician first class in World War II, and again during the Korean war as a recalled Naval Reservists assigned to nuclear weapons testing. Graduating from the Massachusetts Institute of Technology in 1950, he received a B.S. in electrical engineering, a B.S. in engineering administration, and an M.S. in electrical engineering—all three awarded simultaneously for the first time in the history of MIT.

In 1960, he founded David Industries of Irvine, Calif., which with its affiliates, is involved in the development and manufacture of thermal-recovery and other heating systems for the petroleum production industry, precision temperature instrumentation, materials reclamation equipment, and industrial fiberglass products.

On behalf of the Navy League—which since 1902 has been the leading civilian organization in support of the maritime services—Mr. Rau, with tireless effort, unfailing enthusiasm, and dogged determination, has spoken out in support of a strong America before audiences around the country and in testimony before congressional committees.

Active in the Navy League for 21 years at the local, State, and regional levels, he has also been involved in many civic endeavors serving as a trustee and/or director of educational and philanthropic institutions and organizations in Orange County. He has served as president of the Child Guidance Center of Orange County; the University of California, Irvine (UCI) Foundation; the UCI Industrial Associates; The Experience Center (Museum); and the Orange County Center for the Performing Arts. He has taken an active role in politics in California and has served as a major fund raiser for a number of national, State, and local government candidates for office.

In addition to his civic activities, he is the author of a number of papers on engineering subjects and has had many articles published in engineering trade publications.

As my good friend John Rau steps down as national president of the Navy League, I would like to thank him, to congratulate him on a job well done, and to extend my very best wishes to him and to his family for continued success and good health.

Mr. Speaker, I take great pride in commending him to my colleagues for his dedication not only to the Navy League, but also to our country.

FLORIDA CITRUS INDUSTRY THREATENED BY CUTBACKS

(Mr. LEWIS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LEWIS of Florida. Mr. Speaker, Florida ranks first worldwide in citrus production and second nationwide in winter vegetable production.

My State alone furnished 50 to 60 percent of the Nation's fresh vegetable needs during the winter.

While I support the administration's efforts to reduce excessively high budget deficits—I am particularly concerned about the proposal to close seven agricultural weather stations and eliminate the fruit frost warning program.

Growers cannot take chances.

The availability of around-the-clock forecasting means millions of dollars in savings both to the industry and related services—and to the consumer.

I shudder to think of the disastrous result an unanticipated freeze would have on an enormously vital and productive sector of my district and the State of Florida's economy.

□ 1230

THE PRESIDENT'S PROGRAM IS WORKING

(Mr. LOTT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LOTT. Mr. Speaker, I often think that Members of Congress do not listen too well, even to our constituents, let alone each other. But have you been listening recently to the 1-minute speeches? Listening this morning to my colleagues on the other side of the aisle—what are they talking about? They are talking about EPA, El Salvador, yesterday it was Canadian films, the rule on the jobs bill, whereas for the past 1½ years it has been gloom and doom. The naysayers have just been having a grand time talking about how bad the economy was.

Now they are not talking about the economy. I wonder why. It seems that each day a new bud sprouts on the recovery. It began last October, with the dramatic rise in the stock market, and that rise yesterday reached an all-time high. Building starts increased 96 percent in January, as compared to January a year ago. Building permits increased in January 1983 over January 1982 by 88 percent. An even more important signal of the economic upturn is the 0.9 percent increase in industrial production last month.

Domestic auto production jumped 52 percent in February. Construction spending rose 8.9 percent in January, and the initial unemployment claims have steadily been dropping.

Yesterday the first quarter GNP growth figures came out. We think now there may be as much as 4-percent real growth this year.

I urge my colleagues, my Democratic colleagues, that if you are going to continue with your doomsday predictions and with a $68 billion make-work jobs program, you better get going. If you do not, the economy is going to pass you by. The President's program is working, and it is time that we stand up and say so to the American people and for the American people.

BIG GOVERNMENT AND PORK BARREL IS WHAT THE DEMOCRATS ARE ALL ABOUT

(Mr. WALKER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WALKER. Mr. Speaker, for some time we have heard criticism in this Chamber about the administration and about conservatives unwilling to come forth with a so-called jobs approach. Now, within the last few days, we see the kinds of jobs approach that the Democrats have been suggesting. We see that it is not really concerned about the unemployed and the needy; we see that it is concerned about pork. They have got a barrel so loaded with pork that it is top heavy. They are concerned about big-government Congressmen getting their share of the political goodies, and that makes it just like the kind of programs we have had in the past. And the last time they came forth with a program like this, only 12 percent of the people employed within it were previously on the unemployment rolls, and only 2 percent of the money got spent on the unemployed. And that is exactly what is happening in the pork barrel kind of bill that they have brought forth now.

The lesson is clear from what happened in the past. Congress cannot solve unemployment with legislation and programs. Unemployment can only be eliminated with a working economy, meaning lower inflation, balanced budget, low interest, and regulatory reform.

That is the direction in which we have been trying to go and which the Democrats have tried to frustrate for 2 years. They will continue to try to frustrate economic recovery because it is not their kind of big government approach. And big government is what the Democrats are really all about.

PERMISSION FOR SUBCOMMITTEE ON MERCHANT MARINE OF THE COMMITTEE ON MERCHANT MARINE AND FISHERIES TO SIT ON TODAY AND TOMORROW, MARCH 2 AND 3, 1983

Mr. BIAGGI. Mr. Speaker, I ask unanimous consent that the Subcommittee on Merchant Marine of the Committee on Merchant Marine and Fisheries be permitted to sit on Wednesday, March 2, 1983, for the purpose of hearing testimony on the authorization of maritime programs of the Department of Transportation for fiscal year 1984, and on Thursday, March 3, 1983, for the purpose of holding an oversight hearing on the subject of construction differential subsidy paybacks.

The minority members, the gentleman from Kentucky (Mr. SNYDER) and the gentleman from New Jersey (Mr. FORSYTHE), both have been informed and are in accord with this request.

The SPEAKER pro tempore (Mr. ALEXANDER). Is there objection to the request of the gentleman from New York?

There was no objection.

PROVIDING FOR CONSIDERATION OF H.R. 1310, EMERGENCY MATHEMATICS AND SCIENCE EDUCATION ACT

Mr. FROST. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 109 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 109

Resolved, That at any time after the adoption of this resolution the Speaker may pursuant to clause 1(b) of rule XXIII, declare the House resolved into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 1310) to provide assistance to improve elementary, secondary, and postsecondary education in mathematics and science; to provide a national policy for engineering, technical, and scientific personnel; to provide for cost-sharing by the private sector in training of such personnel; and for other purposes, and the first reading of the bill shall be dispensed with. After general debate, which shall be confined to the bill and shall continue not to exceed two hours, one hour to be equally divided and controlled by the chairman and ranking minority member of the Committee on Education and Labor and one hour to be equally divided and controlled by the chairman and ranking minority member of the Committee on Science and Technology, the bill shall be considered for amendment under the five-minute rule. In lieu of the amendments recommended by the Committees on Education and Labor and Science and Technology now printed in the bill, it shall be in order to consider an amendment in the nature of a substitute consisting of the text of the bill H.R. 1699 (containing the text of the amendment recommended by the Committee on Education and Labor to title I of H.R. 1310 and the text of the amendment recommended by the Committee on Science and Technology to title II of H.R. 1310), as an original bill for the purpose of amendment under the five-minute rule, said substitute shall be considered for amendment by titles instead of by sections and each title shall be considered as having been read, and all points of order against said substitute for failure to comply with the provisions of clause 5, rule XXI are hereby waived. It shall be in order to consider an amendment to title I of said substitute striking out the heading "Part B—Postsecondary assistance" and all that follows through the remainder of title I and inserting the text recommended by the Committee on Science and Technology now printed on page 40, line 1 through page 55, line 9 of H.R. 1310, and said amendment shall be considered as if it was an amendment recommended by the Committee on Science and Technology to the substitute made in order as original text by this resolution. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the amendment in the nature of a substitute made in order as original text by this resolution. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

The SPEAKER pro tempore. The gentleman from Texas (Mr. FROST) is recognized for 1 hour.

Mr. FROST. Mr. Speaker, for purposes of debate only, I yield 30 minutes to the gentleman from Missouri (Mr. TAYLOR), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 109 provides for the consideration of H.R. 1310, the National Mathematics and Science Education Act. We are considering H.R. 1310 today in response to a national emergency—the critical shortfall of well-trained educators in our schools, colleges, and universities in the field of mathematics and science and the resulting shortage of students who have adequate knowledge to be trained as engineers, scientists, and teachers of these most important disciplines. For our Nation to continue as a world leader, it is imperative that our schools provide adequate training for our children so that they will be prepared to enter the job markets of the late 20th and early 21st centuries which will require more and more workers trained in mathematics, science, engineering, and other technical skills. H.R. 1310, reported by the Committees on Education and Labor and Science and Technology, is a first step, much like the initial steps taken after the launch of the Sputnik in 1957, to insure that our classrooms are staffed with teachers who can prepare our students for a world in which mathematics, science, and engineering will be of critical importance.

Mr. Speaker, House Resolution 109 is an open rule providing for 2 hours of general debate: 1 hour to be equally divided and controlled by the chairman and ranking minority member of the Committee on Education and Labor and 1 hour to be equally divided and controlled by the chairman and ranking minority member of the Committee on Science and Technology.

Prior to the consideration of H.R. 1310 by the Committee on Rules, the chairmen of both committees introduced H.R. 1699 which contains the text of the Education and Labor Committee amendment to title I of H.R. 1310 and the text of the Science and Technology Committee amendment to title II of that bill. Consequently, to simplify the amendment process when the bill is considered for amendment under the 5-minute rule, the resolution makes in order the text of H.R. 1699 as an original bill for the purpose of amendment. The only amendment specified in the rule is an amendment to title I of the substitute by the Committee on Science and Technology which strikes the postsecondary assistance provisions and inserts the Science and Technology Committee postsecondary assistance provisions as printed in H.R. 1310. While this amendment is specified and shall be considered as a Science Committee amendment, the rule does not otherwise preclude the offering of any other germane amendment to the substitute.

The rule further provides that the substitute shall be read by titles rather than by sections and that each title shall be considered as read. The rule also waives all points of order against the substitute for failure to comply with the provisions of clause 5, rule XXI, which prohibits appropriations in an authorization. Title I of H.R. 1310 and the substitute both contain a reappropriation of funds which is prohibited by clause 5 of rule XXI.

At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or the amendment in the nature of a substitute. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

Mr. Speaker, title I of the bill deals with mathematics, science, and foreign language improvement programs at the elementary and secondary and postsecondary education levels. All of the programs in title I are to be administered by the Department of Education. As reported by the Committee on Education and Labor, title I authorizes $300 million for fiscal year 1984 and an open-ended amount for fiscal year 1985 for programs to improve the quality of instruction and levels of student achievement in mathematics and science education, to increase the supply and strengthen the qualifications of teachers of mathematics and science and to encourage students to pursue teaching careers in mathematics, science, and foreign languages.

Title II provides for the creation of a national policy for technical engineering and scientific personnel. The title provides for a special matching engineering and science personnel fund to be administered by the National Science Foundation to be used in cost-sharing programs for the precollege, college and postgraduate training of such personnel. As reported by the Committee on Science and Technology, the fund is authorized $100 million for each of the 5 fiscal years 1984 through 1988.

Mr. Speaker, there is no question that our Nation needs once again to address the question of mathematical, scientific, and technical education. In 1958 with the passage of the National Defense Education Act, the Congress took positive steps to improve these areas of education and in these times of great economic change we must make a renewed commitment to those efforts. Our schools are facing shortages of qualified teachers to teach these subjects and as a consequence the levels of achievement of our students continues to decline. This bill will at least begin to address a problem that has serious implications in America's future. As we did in the late 1950's and 1960's, we must dedicate ourselves

to quality education and training of students who can compete in global markets.

Mr. Speaker, I commend the Committees on Education and Labor and Science and Technology for moving so quickly to bring us this most important legislative proposal. If we are to insure economic well-being as well as a strong national defense in the coming years, this is a small step that we must support. I urge adoption of the rule.

Mr. TAYLOR. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 109 is an open rule under which the House will consider legislation to authorize a new, $425 million mathematics and science education grant program designed to train teachers and engineering and scientific personnel.

As the gentleman from Texas (Mr. FROST) has explained, this rule makes on order our consideration of a substitute, H.R. 1699, as an original bill for the purpose of amendment under the 5-minute rule. The rule provides for a committee amendment to the substitute, and waives clause 5 of rule XXI against that substitute.

Mr. Speaker, this legislation represents a joint venture between the Committees on Education and Labor, and Science and Technology, and each committee is allotted 1 hour of time, to be equally divided. The substitute, H.R. 1699, is a clean bill introduced by the gentleman from Kentucky (Mr. PERKINS) and the gentleman from Florida (Mr. FUQUA) to expedite consideration of the two pieces of H.R. 1310 their committees reported.

For those Members who may have amendments, I would point out that title I of H.R. 1699 consists of the text of title I of H.R. 1310 as reported by the Education and Labor Committee; while title II of H.R. 1699 consists of the text of title II of H.R. 1310 as reported by the Science and Technology Committee.

The rule provides that the substitute will be read by titles instead of by sections, and each title is to be considered as read. The waiver of clause 5 of rule XXI is provided because a paragraph of the Education and Labor title constitutes an appropriation. In this situation, the appropriating language changes the purpose of which funds already appropriated may be used.

Mr. Speaker, the rule also provides that the Committee on Science and Technology will offer a package of amendments to a portion of the Education and Labor Committee's title. In addition, one motion to recommit with or without instructions is provided for.

Mr. Speaker, the legislation made in order by this rule represents a major effort by the two committees involved to do something about this Nation's mathematics and science education programs in the hope of correcting the shortage of qualified teachers, improving student interest and achievement in math and science, and training adequate numbers of technical, engineering, and scientific personnel to meet the Nation's future needs.

This legislation has bipartisan support among the members of the two committees, and it is being widely acclaimed as a step in the right direction for educating our future generations.

According to the testimomy we received yesterday in the Committee on Rules, this legislation authorizes a total of $425 million for the 1984 fiscal year. Title I of the substitute contains $325 million in authorizations, including $250 million in formula grants to the States; while title II provides $100 million for an engineering and science personnel fund.

Mr. Speaker, there was no opposition to this rule in our hearing yesterday, and under the rule there will be ample opportunity for Members to offer amendments. I urge the adoption of this rule.

□ 1245

Mr. Speaker, I yield back the balance of my time.

● Mr. OLIN. Mr. Speaker, I rise in support of the Emergency Math and Science Education Act. Our country is suffering a crisis in math and science, and Mr. PERKINS' bill takes an important step toward resolving this crisis.

As one of a handful of engineers in Congress. I know how important engineering education is to helping our Nation increase productivity and compete in the world market. I know, too, that if we are to train the engineers this country needs, we must start in elementary and high schools. Tomorrow's engineers, scientists, and mathmeticians are in grade school today, and they are not getting the early education they need. This not only cheats the children, it robs this country of the brainpower and leadership we need to put us on the frontier of new, exciting developments.

In short, we are missing the boat. Today, all college-bound high school students in Japan take 4 years of math and 3 of science. In the Soviet Union, 10 times as many students take calculus as in the United States. Not surprisingly, the Soviets graduate twice as many scientists and five times as many engineers as we do. If we do not act now, we will all lose out to the competition.

We need to examine several approaches to improving our math and science education. We should look at fellowships for graduate students and loans and grants for college students going into math and science teaching. We should consider tax benefits for companies that share their expertise with our students and teachers or donate their equipment to our schools. The key, though, is to start early with upgraded math and science teaching in our elementary and secondary schools.

The money we invest today will come back to us many times over, as our trained scientists and engineers produce breakthroughs in medicine, telecommunications, and other fields that will save time, money and even lives. We have proven that America can be a leader in these fields. Six of the seven 1980 Nobel laureates were American. Last year, the United States produced 7 out of 9 Nobel prizewinners. Let us make sure our next generation of scientists does as well.●

Mr. FROST. Mr. Speaker, I have no further requests for time, and I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. WALKER. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 393, nays 0, not voting 40, as follows:

□ 1300

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERSONAL EXPLANATION

Mr. GILMAN. Mr. Speaker, because I was on official business on February 15, 1983, in Vienna speaking before the United Nations Commission on Narcotic Drugs, I was unable to vote on the two measures considered by the House of Representatives on that date.

Had I been present for those two measures, H.R. 861, the small business pilot procurement program extension, and H.R. 1043, to improve small business access to procurement information and contracting opportunities, I would have voted "yea" on rollcall No. 8 (H.R. 861), as well as "aye" on rollcall No. 9 (H.R. 1043).

APPOINTMENTS AS MEMBERS OF COMMITTEE ON THE HOUSE RECORDING STUDIO

The SPEAKER. Pursuant to the provisions of 2 U.S.C. 123b, the Chair appoints as members of the Committee on the House Recording Studio the following Members on the part of the House:

Mr. ROSE of North Carolina;
Mrs. BOGGS of Louisiana; and
Mr. BADHAM of California

APPOINTMENT AS MEMBERS OF HOUSE COMMISSION ON CONGRESSIONAL MAILING STANDARDS

The SPEAKER. Pursuant to the provisions of section 5(b), Public Law 93-191, the Chair appoints as members of House Commission on Congressional Mailing Standards the following Members of the House:

Mr. UDALL of Arizona, Chairman;
Mr. SOLARZ of New York;
Mr. FORD of Michigan;
Mr. QUILLEN of Tennessee;
Mr. LOTT of Mississippi; and
Mr. CORCORAN of Illinois.

RESIGNATION AS MEMBER OF COMMITTEE ON EDUCATION AND LABOR

The SPEAKER laid before the House the following resignation as a member of the Committee on Education and Labor:

HOUSE OF REPRESENTATIVES,
Washington, D.C., February 23, 1983.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker of the House, H-204, Washington, D.C.

DEAR MR. SPEAKER: It is my desire and intent to resign from my position on the Committee on Education and Labor and relinquish those responsibilities effective Wednesday, March 2, 1983.

I appreciate your consideration.

Sincerely,

LARRY E. CRAIG,
Member of Congress.

The SPEAKER. Without objection, the resignation is accepted.

There was no objection.

EMERGENCY MATHEMATICS AND SCIENCE EDUCATION ACT

The SPEAKER. Pursuant to House Resolution 109, and rule XXIII, the Chair declares the House in the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 1310.

The Chair appoints the gentleman from Kentucky (Mr. NATCHER) to preside over the Committee of the Whole.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 1310, to provide assistance to improve elementary, secondary, and postsecondary education in mathematics and science; to provide a national policy for engineering, technical, and scientific personnel; to provide for cost-sharing by the private sector in training such personnel; and for other purposes, with Mr. NATCHER in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. Pursuant to the rule, the first reading of the bill is dispensed with.

Under the rule, the gentleman from Kentucky (Mr. PERKINS) will be recognized for 30 minutes, the gentleman from Pennsylvania (Mr. GOODLING) will be recognized for 30 minutes, the gentleman from Florida (Mr. FUQUA) will be recognized for 30 minutes, and the gentleman from Kansas (Mr. WINN) will be recognized for 30 minutes.

The Chair now recognizes the gentleman from Kentucky (Mr. PERKINS).

Mr. PERKINS. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, I rise in support of H.R. 1310, the Emergency Mathematics and Science Education Act.

This legislation tackles a grave national problem that threatens to compromise our competitiveness in world markets, further weaken our industrial base and undermine our national defense. That problem is the weak state of mathematics and science education in this country.

This problem is reaching crisis proportions, as evidenced by severe teacher shortages in mathematics and science, declining student achievement, fewer students taking mathematics and science courses, and fewer skilled technicians and high level professionals emerging from our postsecondary institutions.

The legislation before us today will help restore our stature in international markets without trade restrictions. It will beef up our national defense without more weapons.

H.R. 1310 will accomplish these ends by investing in our future: educating our young people, training our teachers, and building the capacity of our schools and institutions of higher education. This bill establishes programs to strengthen mathematics and science education at the elementary, secondary, and postsecondary levels and to revitalize the training of engineering, scientific, and technical personnel.

So important is this endeavor, that we are bringing to bear the resources and expertise of both the Department of Education and the National Science Foundation. Two committees—the Education and Labor Committee and the Science and Technology Committee—worked together to bring this bill to the floor expeditiously. I would like to commend my colleague, Chairman DON FUQUA, for showing the utmost cooperation during this entire process. Chairman FUQUA and his committee have contributed greatly to this bill.

H.R. 1310 is the product of careful, bipartisan deliberation in both committees. After considering the scope of the mathematics and science education problem in hearings over the past year and a half, the education and labor committee reported H.R. 1310 by a vote of 27 to 3. The Science and Technology Committee reported the bill by a unanimous vote.

The need for this legislation is widely recognized in this Chamber, as the bill has 49 cosponsors. Educators, the scientific community, employers and the public are looking to the Federal Government to provide leadership in this area, and the bill has widespread support among major education and other organizations.

I want to emphasize that this legislation has a reasonable cost of $425 million in fiscal year 1984, using the Science Committee's figures. Given the magnitude of the problem, this price tag is modest. Many education associations supporting the bill, like the National Education Association and the National School Boards Association, consider it only a short term, emergency response to our mathematics and science needs. I agree with this view. A broader, more comprehensive proposal will be brought before our committee at a later date and hearings will be held, and I hope such a bill can be reported.

A few statistics from our committee hearings vividly document the extent of the problem:

According to the president of the University of Illinois, of the 8,146 students who received baccalaureate degrees from that institution in 1982, only 49 chose to be certified to teach high school mathematics or natural science.

Forty-three States report shortages of mathematics teachers, 42 of physics teachers, and 38 of chemistry teachers.

Fifty percent of newly employed high school mathematics and science teachers are not formally qualified to teach those subjects.

One-half of all U.S. high school students take no mathematics or science beyond the 10th grade. American student preparation in mathematics and science stacks up poorly against that of the Soviet Union, Japan, and several other countries.

Student science achievement dropped steadily on three national assessments in 1969, 1973, and 1977, with the high achieving students losing the most ground.

These declines are occurring at the same time the demand in the work force for people with better scientific and mathematical skills is growing. The armed services also anticipate growth in their needs for people with scientific and technical skills.

The situation is not unlike the crisis our country faced in 1957, following the Sputnik launch. In that era, Congress, with the leadership of the Education and Labor Committee, enacted the National Defense Education Act of 1958.

I feel strongly that the present conditions demand a renewal of the same sort of commitment. That is why H.R. 1310 proposes a comprehensive approach, touching elementary school through postgraduate, including short-term and longer term solutions, and involving two Federal agencies.

Let me turn to some of the specific provisions of the bill, especially the elementary and secondary program.

In order to really have a significant impact on this widespread problem, and in order to get funds down to the classroom level where they have the most impact, our committee felt it was important to have an elementary and secondary formula grant program insuring almost every school district a grant of a usable amount.

Thus, part A of title I authorizes $250 million for fiscal year 1984 and an open-ended amount for 1985 for grants to States for elementary and secondary mathematics and science education improvement programs. At least 75 percent of each State's grant must be distributed to local school districts, with the remainder kept by the State educational agency for State-run programs and administration.

At both the State and local level, the top priority for using these funds is inservice teacher training in mathematics and science. These programs may focus on improving the skills of current mathematics and science teachers, elementary teachers and other teachers involved in science and mathematics instruction, and recertifying of teachers of other subjects as mathematics and science teachers. These training projects will have an impact on the shortages of adequately prepared teachers. And as teachers become better qualified, this will affect student achievement.

After meeting their teacher training needs, the State and local school districts may use their funds for other activities, at their discretion, to improve mathematics and science education.

The bill encourages joint programs between local school districts, State educational agencies, institutions of higher education, business and industry, and other public and private agencies such as libraries and museums.

H.R. 1310 also addresses the teacher shortage and qualification problem through a variety of postsecondary education programs. First, the legislation will provide scholarships for up to 5,000 undergraduate and graduate students in fiscal year 1984, to encourage them to become teachers of mathematics and science. For every year of scholarship assistance, which can cover up to the full cost of attendance at a postsecondary institution, the student must agree to teach elementary or secondary mathematics or science for 2 years.

The second prong is a program of grants to institutions of higher education to enable them to offer summer institutes. These institutes are aimed at improving the teaching skills and mathematical and scientific knowledge of current teachers.

H.R. 1310 also allows for grants to institutions of higher education for faculty improvement and curriculum development in mathematics and science. Finally, title I sets up a program of research into mathematics and science teaching and learning.

All the above programs are contained in title I of the bill. Mr. FUQUA will explain title II, which deals with the scientific and engineering programs administered by the National Science Foundation.

I would be remiss if I did not praise my colleagues on the Education and Labor Committee for their contributions to this bill and their diligence in getting it to the floor expeditiously. I especially commend my colleagues Mr. SIMON and Mr. GOODLING, who worked with me from the first day of the session and played a major role in writing this legislation.

Mr. Chairman, I look to H.R. 1310 as a first step in reviving our educational

system and economic base. I urge the Members to make this investment in our future and join with me in supporting this essential legislation.

Mr. FORD of Michigan. Mr. Chairman, I rise in support of the bill H.R. 1310, the Emergency Math and Science Education Act.

It is clear that the American work force must change to match the demands of the changing national and international economy. Management analyst Peter Drucker predicts that through the next two decades 10 to 15 million manufacturing jobs will disappear in America. While precise occupational projects are difficult, it is clear that the new jobs will be in areas such as computer technology, robotics, fiber optics, genetic engineering and health care. Most of the job growth in the eighties and nineties will be in occupations requiring high levels of competency—white collar, technical, and skilled trades workers.

Lester Thurow, an economist at Massachusetts Institute of Technology, summarized the situation:

> The economy is not going to thrive unless there is a major effort to upgrade the American labor force from top to bottom.

It is particularly apparent that there is a need for a high level of scientific, technological, and computer literacy for all citizens. This competency will be required not for a few but for most workers—including those displaced by the decline of manufacturing, those currently holding jobs and the new entrants into the labor force.

It is plain that the upgrading of the American work force that is required can only come as products of the American educational system. Yet, when we examine education in America we find that it is not producing or is not being allowed to produce the trained and skilled manpower we need. Shortages already exist or are anticipated for engineers, nurses, computer service technicians, and machinists, among others. For example, the American Electronics Institute estimates that industry will need nearly 200,000 new engineers by 1985; while universities, given their current faculty, can supply only 70,000.

Most projections of skill shortages do not take into account the $1.5 trillion defense buildup planned by the Reagan administration. The Defense Department estimates that its contractors will need 71,000 more computer specialists, 61,000 more electrical engineers and 110,000 more machinists, tool and die makers and metal molders by 1987.

In terms of our needs for trained and skilled manpower both as the engine of economic growth and productivity and as a crucial element in sustaining our national security, we find that critical shortages already exist. As we look back down the educational pipeline, the prospects for the future are also not encouraging.

Looking first at elementary and secondary education:

Between 1960 and 1977, the proportion of public high school students (grades 9 to 12) enrolled in science and mathematics courses declined—from 60 to 48 percent in the case of science.

Since 1970 there has been a nationwide trend toward reduction in high school graduation requirements. Only one-third of the Nation's 17,000 school districts require more than 1 year of mathematics and science for graduation.

There has been a steady decline in the science and mathematics achievement scores of U.S. 17-year-olds in the last decade.

The mathematical and verbal scholastic aptitude test (SAT) scores of students (approximately 1 million college-bound students, largely from the 2% of U.S. high school graduates) have declined steadily over an 18-year period through 1980 and showed only a slight gain in 1981.

There is a severe and growing shortage of mathematics and physical science teachers in the Nation's secondary schools.

In 1981, 50 percent of teachers newly employed nationwide to teach secondary science and mathematics were actually uncertified to teach those subjects.

In 1981, 43 States reported a shortage of mathematics teachers and 42 States reported a shortage of physics teachers.

Only 15 percent of American high school students now study a foreign language—down from 24 percent in 1965. The decline is continuing.

If we turn our attention to postsecondary education, we find:

Colleges and universities have been lowering their admission requirements, accepting students with less course work in mathematics, science, foreign language, and academic subjects generally. For example, only 8 percent of American colleges and universities now require a foreign language for admission, compared with 34 percent in 1966.

The report, Engineering Manpower and Education prepared by the Business-Higher Education Forum notes:

> Overwhelming evidence and almost unanimous consensus point to a severe shortage of doctoral-level engineers, both in the immediate market and in preparation.

For example, a recent report of the National Science Foundation indicates that there are more than 16,000 unfilled engineering faculty positions. The shortage is most severe in computer engineering where 16 percent of faculty positions are unfilled.

The scientific instruments and equipment at our colleges and universities are growing increasingly obsolete. The quality of both teaching and research is diminished when students and faculty must use wind tunnels, telescopes, reactors and accelerators that are not state of the art.

In the arts and sciences, undergraduate enrollments have been declining in many areas as students shift from fields like languages and literature to business and engineering. But, most disturbing is the fact that the very best students in the arts and humanities are not continuing on to graduate school in these fields.

It appears that the doors of educational opportunity are being narrowed. The percentage of nonwhite students in American colleges and universities doubled between 1960 and 1977, but it has remained unchanged in the last 5 years. Low income and minority students are also being forced by increasing costs and decreasing Federal aid to attend the lower cost public 2- and 4-year institutions. The number of students from families earning between $6,000 and $24,000 a year attending private colleges has dropped by 36 percent in 2 years. The number of Harvard's applicants who were the children of parents who never attended college fell by 27 percent in 3 years. The New York Times has editorialized against the danger of "a caste system" and "a new college segregation" in higher education.

The bill we are considering today is an important first step toward remedying the problems which I have described. It is the product of intensive consideration by the Education and Labor Committee and the Science and Technology Committee. It provides for a series of initiatives to strengthen education in mathematics and science at all levels from elementary through graduate school. It utilizes the resources and experience of the Department of Education and the National Science Foundation. I urge my colleagues to support this bill which will put us on the road to upgrading the quality of education in America.

Mr. HOYER. Mr. Chairman, America is currently in the midst of a crisis in the scientific education of our young people. The critical study of math and science is on the wane and the results are devastating. We have fewer technicians in these fields, declining test scores on student achievement tests, and fewer qualifed teachers in these critical areas.

Less than 30 years ago, America was caught unprepared in these same fields, and, as a result, we assumed the unenviable position of spectator as the Russians launched Sputnik. We responded then—with amazing success—and we must respond again today.

The future and present employment and defense needs of this Nation require a technologically literate populace. The world is becoming smaller as high technology allows us to

communicate and produce more efficiently. According to the Education and Labor Committee, demand for electrical and computer engineers is expected to exceed the supply by 40 percent in 1985. Data processing mechanics are expected to grow by 148 percent by 1990, computer analysts and office machine service personnel by 80 percent and 81 percent respectively by 1990.

The defense implications of this situation provide more compelling justification for our prompt action, today. The concept of conventional warfare has in fact been replaced by computerized warfare. Today, the Air Force reports that 57 percent of its civilian vacancies are for engineers. Only 53 percent of the Navy's needs for such personnel have been met, and the Army's need for engineers grew by 34 percent over the past 2 years. A review of the status of qualified teacher availability and student achievement will reveal that the immediate prospect for meeting these needs is not optimistic.

According to the responses of 45 States participating in a national survey, 43 reported shortages in math teachers. Only one-third of the Nation's school districts require more than 1 year of math or science, and seven require no math for graduation. Forty-two States reported shortages in physics teachers. In fact, there are only 10,000 physics teachers for the 17,000 school districts in the country, and calculus in taught in only 31 percent of America's high schools. For America's high school students these shortages produce tangible ramifications. The Education and Labor Committee indicates that only 34 percent of our high school graduates have taken 3 years of math. Less than 20 percent have taken 3 years of science, and only 8 percent have taken calculus. The mean SAT math score dropped from 502 in 1963 to 466 in 1980 while the number of students earning a 700 score on that exam dropped 15 percent between 1967 and 1975.

International comparisons bring the crisis to clarity. In the Soviet Union, high school graduates are required to have taken 2 years of calculus, 5 years of physics, 4 years of chemistry and biology, and 5 years of algebra. Last year the Soviets graduated 300,000 engineers from its postsecondary institutions. Japan's college-bound students take 4 years of math and 3 years of science. Last year 80,000 Japanese engineers matriculated. In the United States, only 65,000 engineers graduated from college.

Finally, Mr. Chairman, I am pleased to support H.R. 1310 because it will be responsive to the needs of the Fifth Congressional District of Maryland, where this year, math and physical science teachers will have to be recruited from out of State. This is so because the State of Maryland graduated a de minimus number of teachers in these areas. In fact, the Prince Georges County Board of Education indicates that all math teachers who were recently laid off have now been recalled, but the need still exists for more.

Mr. Chairman, the Emergency Mathematics and Science Act is a first step in the long road we must travel to bring ourselves up to the level of past expertise. In this increasingly more complex and technically oriented society, clearly our future depends on the adoption of a sound and directed policy for the scientific education of our youth. I hope my colleague will join with me today in adopting this sorely needed legislation.

□ 1315

Mr. GOODLING. Mr. Chairman, I yield such time as he may consume to the gentleman from Illinois (Mr. ERLENBORN), the ranking minority member.

Mr. ERLENBORN. Mr. Chairman, I am opposed to H.R. 1310 on both procedural and substantive grounds. This legislation, originally introduced as H.R. 30, was rushed through the Education and Labor Committee.

I cannot understand why it was necessary to circumvent subcommittee consideration of this legislation. One of the values of subcommittee action is that it provides both the Members and the public an opportunity to review the shape and direction of the legislation in the context of the hearings. Any benefit that might accrue from suggestions made during the hearings or from the reaction of interested parties based on a subcommittee markup is completely negated by unnecessarily rushing this legislation through full committee markup. One example of the problems created by this unwarranted haste is that our members had barely 3 days to consider an alternative proposal put forward by the administration. One would think the committee would at least want the opportunity to evaluate thoroughly a major new initiative by the administration.

Another consideration is the authorization level contained in H.R. 1310. Before the markup ended, the committee managed to incorporate an additional legislative initiative which has the effect of increasing the proposed spending ceiling from $300 million to $400 million. I think it is the height of irresponsibility for the committee to create a new $400 million a year spending program in the face of a $200 billion deficit. This authorization level is $350 million more than the administration has requested.

It is obvious that the committee has no fear that we might just be throwing money at a problem with the hope that it would simply disappear. That tactic has not worked in the past and I am not convinced that it will be any different this time around.

The elementary and secondary education portion of the bill proposes to fund a wide range of activities ranging from teacher inservice training programs, summer institute expenses, and for other activities to improve instructional programs in mathematics and science. Given the scope of this legislation I fear that Congress will be raising expectations and making promises that are not likely to be fulfilled and without any certainty that whatever amount is spent will produce the result sought.

The proposed national teaching scholarship program provides scholarships to college juniors and seniors and to graduate students based on their intention to teach math, science, or foreign language. It does not appear to matter whether these individuals ever had any prior inclination to enter the field of teaching before applying for the scholarship.

These scholarships would be in addition to other Federal aid a student may receive—in other words, the scholarship is to act as an encouragement to students to enter math, science, or language teaching. The idea of incentives is laudable, but it is questionable that these scholarship will really increase the number of math or science teachers. After receiving the scholarship and finishing college, nothing would prevent the student from accepting a job in private industry and opting to repay the scholarship. Some students may view the scholarship as a new form of Federal aid, the only requirements being that they are making satisfactory progress and express an intention to teach math, science, or foreign language.

I also have concerns about the length of time it could take for a scholarship recipient to enter the classroom as a certified teacher from the day he or she receives the scholarship; 2 years to finish college, at least 1 year of study for certification, and possibly more for specialized training. There are no requirements in the bill that a scholarship recipient must begin teaching within a set period of time upon receipt of the money; only that the recipient indicate his intent to teach at some point.

I feel a scholarship program focused on current teachers—people who are more certain to teach but who need retraining—is a better use of Federal dollars and a surer way of getting math and science teachers into the classroom. For that reason, the proposal submitted by the administration entitled the "Science and Mathematics Teacher Development Act—(H.R. 1324)," is particularly attractive, and I intend to offer amendments and sup-

port others which would move in this direction.

I also oppose extending services under part B to teachers of foreign language. There is a shortage of Federal tax dollars, and we should direct them to the highest priority, not diffuse them.

I urge my colleagues to reject H.R. 1310 and to support a series of amendments designed to alleviate the problem of teacher shortages without compounding our deficit problems. I intend to offer a series of amendments which would result in preserving title I, part B of H.R. 1310. In effect, my amendments would provide for a $50 million program to increase the short-term supply of mathematics and science teachers in place of the $400 million package provided in H.R. 1310.

If we are serious about meeting the need to improve our children's knowledge of basic subjects, we ought to write a realistic program designed to achieve that goal. We cannot afford to do otherwise.

Mr. FUQUA. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, the Committee on Science and Technology joins the Committee on Education and Labor in supporting H.R. 1310, proposing a broad and comprehensive bill to deal with what has been termed a crisis in science and math education. H.R. 1310, while comprehensive in nature is not seen by either committee as a solution to all the problems confronting our educational system today in science, math, engineering, and technology. Rather it should be viewed as a first step—although an important one—in a series of steps to be taken collaboratively by the Federal Government with State and local governments, academia, business and the other elements of the concerned private sector. True resolution of the problems will require a protracted effort on everyone's part to reverse the present trends of our educational system and meet our human resource needs of tomorrow.

Mr. Chairman, both committees have had extensive hearings on the issue of science and math education and its impact on the Nation's trained technical, engineering or scientific personnel. The Science Committee held five series of hearings in the last Congress as well as a final set of hearings in this Congress. The last day, in fact, we heard from over 20 witnesses representing industry, academia, State and local governments and various professional and educational groups and societies. In addition, dozens of conferences, meetings, and colloquiums have been held throughout the country with sponsors including the National Academy of Sciences, the American Association for the Advancement of Science, the National Association of Manufacturers, the American Association of Engineering Societies and many others.

Let me note here a few of the facts and ideas we have heard resulting from these oversight and investigative activities:

Fifty percent of new science and math teachers at the secondary school level are unqualified to teach those subjects.

Fewer than 30 percent of the Nation's high schools require more than 1 year of science and math.

There currently exists a 9-percent shortage of engineering faculty at just the time when engineering course enrollments are increasing.

Overcrowding of classrooms, lack of advanced instructional and research instrumentation, as well as noncompetitive salaries are attracting young engineering faculty and instructors out of the university and into industry.

Fewer American engineering students are entering graduate level programs to create the next generation of teachers and researchers in this area.

To put it another way, we are eating our "seed corn"—and that "seed corn"—our teachers and instructors, our researchers and engineers—will be critical to this Nation's future well-being.

As the President recently recognized in his second state of the Union address:

> Education, training and retraining are fundamental to our success as are research, development, and productivity . . . We Americans are still the world's technological leader in most fields. We must keep that edge, and to do so we need to begin renewing the basics—starting with our educational system.

I believe we all agree on the need as we stand here today. As I have noted, the problems are quite extensive, underscoring the need for quick action. In the 97th Congress, over 40 bills were introduced, but none were passed. I believe Members who have studied this problem are now prepared to act.

The bill before us today represents the culmination of almost 2 years of effort by numerous individuals both here in Congress and from outside. Again, it is not intended to be a single answer to the complex issue confronting us. Rather, it is a start in the process.

Let me briefly mention the highlights of the Science Committee's actions and recommendations as reported for consideration on the floor. As already noted by my distinguished colleague from Kentucky, the chairman of the Education and Labor Committee, Congressman CARL PERKINS, H.R. 1310 has two parts, title I—the "Engineering Mathematics and Science Education and Jobs Act" and title II—the "National Engineering and Science Personnel Act of 1983." The elementary and secondary portion of title I was considered solely by the Education Committee; the other portions of title I jointly by our two committees; and title II solely by the Science Committee.

In the title I activities considered by the Science Committee we found ourselves in agreement with the Education Committee as to the actual activities to be taken, although there were some changes in responsibilities and resources allocated between the Department of Education and the National Science Foundation. These included:

A special national teacher incentive scholarship program to be administered by the Department for providing new elementary and secondary math and critical foreign language teachers.

A special national teacher incentive scholarship program to be administered by the Department for providing new elementary and secondary math teachers, and teachers of critical foreign language.

Summer institutes and workshops to be operated by both the foundation and the Department aimed at improving teaching skills.

Postsecondary mathematics, science, and foreign language improvement at institutions of higher education; and investigations of effective educational methods and programs.

In title II the major thrust is twofold. One, to establish a clear policy as to the Federal role in maintaining an adequate supply of properly qualified technical, engineering and scientific personnel. Second, to establish a special matching fund administered by the National Science Foundation. This cost-sharing fund would focus on the following:

Recruitment and retention of new engineering faculty.

Two-year and community college, as well as four-year institution faculty development in high technology and scientific fields.

Instructional Instrumentation with special emphasis on computer accessibility in post secondary institutions.

Precollege science programs including the use of industrial personnel and resources in education programs; and the promotion of public understanding of science and mathematics.

The funding level in title I as reported by our committee was $325 million for fiscal year 1984; in title II $100 million per year is authorized for a 5-year period beginning in fiscal year 1984. The total amount in fiscal year 1984 would be $425 million.

Although $425 million is a lot of money, I would note that the Nation now spends over $200 billion annually for our public education enterprise. The $425 million is less than one-quarter of 1 percent of $200 billion. Given the crisis we have all acknowledged as

confronting us, I believe the amounts we have reported represent a level of investment in our Nation's long-term economic and security needs.

Mr. Chairman, I strongly urge support for this bill. When appropriate, I will offer a committee amendment reflecting the Science Committee's recommendations. With that amendment I would hope we reach a strong agreement on this legislation, and I urge its adoption.

□ 1330

Mr. WINN. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in strong support of legislation which would address a pressing national need—the shortage of qualified mathematics and science teachers and technical, engineering, and scientific personnel. This is a problem that affects the entire Nation, whether it be Kansas, New York, or North Dakota. The United States is embarked on an era where high technology is the byword. Unfortunately, in many cases this country is not equipped to handle the revolution, either now or in the years to come.

Many of our young people have the burning desire to learn about these emerging technologies and to acquire these new skills. Yet, in many instances, we are unable to provide them with the necessary teaching to properly develop and channel this thirst for knowledge. One only has to look at the fascination of a 10-year-old with a new computer to realize that we are allowing a great national resource to go untapped, when we do not promote mathematics and science literacy in our students.

Let me point out that it is just not at the elementary and secondary level that we are falling behind in our efforts to achieve science and mathematics literacy. The crisis extends to the graduate and postgraduate level. The United States faces a crisis at all levels when it comes to providing an adequate number of technical, engineering, and scientific personnel to meet the demands of this high technology revolution.

When sputnik was launched in 1958, its implications and its threat to our national security so alarmed this country that we embarked on an intensive campaign to emphasize science and mathematics education throughout our school systems. There is no doubt that such emphasis paid off, as most dramatically evidenced by the spectacular Moon landing in 1969. That brillant scientific and engineering feat was only a small part of a decade of tremendous achievements by the American science community. As the threat of a Soviet challenge diminished, it seemed so did our interest in science and mathematics education. Our 16,000 school districts nationwide now find themselves extremely hard pressed to come anywhere close to finding an adequate number of qualified teachers in mathematics and science. This is reflected at the other end of the pipeline in our colleges and beyond, as we are not graduating a sufficient number of technical personnel to meet our national needs. We all know that in many respects the Japanese and our Western European allies have caught and surpassed us in many scientific fields. That is why, Mr. Chairman, we have today, I believe, a consensus both in this body and the Nation, that we cannot allow the situation to deteriorate any further. It must be improved.

The thrust of H.R. 1310 is to achieve that improvement. It does so, as the chairman has explained, by a broad, two-track approach. One track provides for grants to States to address elementary and secondary education math and science needs. That essentially will be administered by the Department of Education. The second track provides for a program administered by the National Science Foundation which will address not only elementary and secondary needs, but postsecondary and graduate shortages in scientific and engineering disciplines. With a few modifications, I feel this worthwhile bill will achieve its goals.

Mr. Chairman, having expressed my support for the concepts contained in this bill, I must point out that there are some problem areas. During markup of this bill, in the Science and Technology Committee, the minority members expressed some deep concerns with what we felt was a lack of proper focus in the bill. The bill authorizes $425 million. Some would say that is an inadequate amount to deal with this problem. However, I feel that is more than enough to get the job done if you focus the money properly. This means we must hold down administrative expenses at the local level to a bare minimum. This means we must insure that these are administered to the maximum efficiency between the National Science Foundation and the Department of Education. This means we cannot please everyone in this one piece of legislation by spreading limited resources over too many programs. All of these problems, and others, must be addressed in the context of the impact on the Federal budget and the projected deficit.

Mr. Chairman, at the appropriate time there will be amendments offered to correct many of these deficiencies. However, I do want to reiterate that I fully believe that there is a consensus that a national problem exists. Our only question now goes to the direction of the solution. I am certain that the debate that follows and the amending process will go a long way to pointing out the proper direction.

Mr. PERKINS. Mr. Chairman, I yield such time as he may consume to the gentleman from Iowa (Mr. HARKIN).

Mr. HARKIN. Mr. Chairman, I am very pleased to be an original cosponsor of H.R. 1699, the Emergency Mathematics and Science Education Act. This bill recognizes two facts which have been ignored or underestimated for too long; Namely, the need for more qualified science and math teachers, and the critical importance of these subjects to our economic well-being.

The first section of the bill provides $250 million in grants to States for the improvement of elementary and secondary math and science education. The grants will focus on inservice teacher training, curriculum improvement, and modernization of instructional techniques. Funds are also authorized for postsecondary assistance, including scholarships for those who are planning to pursue teaching careers in math and science, summer institutes for upgrading teacher skills, curriculum development and research into more effective methods of instruction in math, science and foreign languages.

The second section of the bill establishes an engineering and science personnel fund within the National Science Foundation. The fund, authorized at $100 million, will provide matching grants to improve science education. Priority areas for grant awards will include:

College faculty development in high-technology fields;

Updating of instructional techniques for postsecondary education;

Recruitment and retention of new engineering faculty at the postsecondary level;

Community college instructor development in high-technology fields, and purchase of new scientific equipment;

Precollege science and math programs, with emphasis on cooperation with the private sector;

Development and dissemination of instructional materials in math, science, and engineering education; and

Public understanding of science and math.

During the past decade, surveys of schools around the country have shown a shocking decline in the number of math and science teachers. Last year alone, some 600,000 children were unable to enroll in math and science classes due to a lack of teachers or resources. In my home State of Iowa, the number of graduates prepared to teach mathematics declined from 234 in 1970 to 60 in 1979—a decline of 74 percent. The number of teacher vacancies in that period fluctuated between 200 and 250 each year. To make up for a lack of qualified per-

sonnel, certification standards are often lowered.

Training opportunities for math and science teachers to update their skills and backgrounds are essential to keep up with the rapid advances taking place in these fields. In most cases, precollege math, science, and technology instruction has yet to take advantage of the great strides in technology and behavioral science during the past two decades. For example, computers provide an immense opportunity to develop innovative curriculum and instruction approaches while at the same time exposing students to basic computer use concepts. Computer software in classrooms, however, is generally inadequate and many teachers lack the skills needed to utilize these computers.

The situation with respect to computer-related degrees is approaching the level of a national crisis. With more and more students clamoring for computer degrees, and at a time when there are roughly twice as many computer-related jobs as there are graduates to fill them, the pool of qualified teachers has been drying up.

Addressing the shortfalls in math and science education now will lower future unemployment rates and enable the country to compete more effectively in the world marketplace. Even the Reagan administration has come to see the folly of budget cuts in this area. I was happy to see that after 2 years of proposing cutbacks in National Science Foundation programs, Mr. Reagan did an about-face this year. It is particularly fitting to discuss this bill during the same week that we will vote on emergency jobs legislation. While that bill attempts to provide short-term solutions to the problem of unemployment, this bill looks to the future. It is "preventive medicine" to keep future unemployment rates down.

The cornerstone of a healthy economy is a well-educated, well-trained work force. It does not take a crystal ball to see that the jobs of the future, as well as a good number of present job openings, demand a solid background in math and science. The need for a national agenda and a strong, coordinated national policy with respect to math and science education is clear. Passage of this bill is the first step.

Mr. PERKINS. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois (Mr. SIMON).

Mr. SIMON. Mr. Chairman, what we are doing here today is taking a step forward. We are not providing any magic cure for the problem; this bill is not a substitute for State and local school boards moving. It is a gesture, but a gesture of some significance on the part of the Federal Government to the States, to local school boards, that we have to move on this problem.

Mr. VALENTINE. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I now yield to my colleague from North Carolina who has expressed a desire to ask a question.

Mr. VALENTINE. Mr. Chairman, I intended to offer an amendment to the section to the bill which provided for the summer institutes. But I would ask the gentleman a question as to whether or not he understands that it is the intent of this proposed legislation for the Federal Government to cooperate with the chief school administrator or administrators so as to insure or guard against a duplication?

Mr. SIMON. I thank the gentleman from North Carolina for that question. That clearly is the intent.

The amendment the gentleman has drafted, some people were concerned that maybe we were going to end up with too much redtape as we proceed, but clearly the intent is that both the NSF and the Department of Education cooperate with the chief of State school officers so that we avoid duplication.

I thank the gentleman for his question and hope getting this on the record will clarify things.

Mr. VALENTINE. I thank the gentleman.

Mr. CHANDLER. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I am happy to yield to the gentleman from Washington.

Mr. CHANDLER. Mr. Chairman, as the Chairman of the Committee on Science and Technology knows, I had planned to offer an amendment during the committee markup. My amendment was designed to place private business into a partnership with the Federal Government in the provisions of work-study jobs for students pursuing math or science education degrees.

I agreed to withdraw that amendment, Mr. Chairman, at the time in order to consult with the chairman of the committee and the ranking minority member, the gentleman from Kansas (Mr. WINN) and with the gentleman from Illinois (Mr. SIMON) on the impact of the amendment on the existing college work-study program.

I have decided not to offer the amendment on the floor after discussing the amendment with the gentleman from Illinois (Mr. SIMON). We both believe it would be more appropriate to consider it during the upcoming authorization of the Higher Education Act.

Mr. SIMON. If the gentleman would yield back to me, I want to thank the gentleman for agreeing not to offer his amendment to the Emergency Math and Science Act. I have assured the gentleman that we will consider his amendment during the reauthorization of the Higher Education Act on which my subcommittee will begin hearings later this year.

The gentleman has an excellent idea for improving the college work-study program and the cooperative education program. His suggestion has merit and it will be considered by our subcommittee when we get into the reauthorization.

I thank the gentleman.

Mr. CHANDLER. I thank the gentleman for yielding.

Mr. McCURDY. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I now yield to my distinguished colleague from Oklahoma.

Mr. McCURDY. I want to take a minute of the gentleman's time to state for the record my appreciation for the fine work and leadership the gentleman has provided on this issue. There is no question as to foreign languages and the concerns of education in attracting and retaining qualified people in math and science education that the gentleman has been at the forefront and vanguard.

As a member who sits on the Science and Technology Committee with you, and understanding the work you have done on the Education and Labor Committee, I again want to tell you how much the people in my part of the country are pleased and I think the entire Nation owes you a debt of gratitude for the leadership you have provided on this issue.

Mr. SIMON. I thank my colleague from Oklahoma and if I may reciprocate I commend him for his superb leadership in this whole matter.

I yield back the balance of my time.

Mr. GOODLING. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise, of course, in support of the Emergency Science Education Act and the National Engineering and Personnel Act for many reasons.

First of all, I think it is an incentive for local school boards and local school districts to move on an issue where they must move and move rapidly.

I do not know when I ever read testimony as carefully and as often as I read the testimony that was given before our committee. After digesting all of that testimony it appeared to me that there were five areas that most people who came before the committee were concerned about.

First of all, the testimony would indicate that they had a real concern about the shortage of math and science teachers. Some areas have an abundance. Other areas have a real shortage.

They were also concerned about the decline in student performance. They were concerned over the economic impact that our declining math and science literacy may have as we try to recover from a worldwide recessionary period, and they had real concern

about national security as it relates to math and science.

Secondly, I think they were concerned about the fact that the new era we are moving into will demand that the general population have a science and mathematics literacy far beyond anything that we now have. It is stated that perhaps 80 to 90 percent of the general population are illiterate when you speak in terms of math and science knowledge. This cannot be if we are going to move ahead into the kind of an era that we are moving into.

Next, they were concerned that we do some focusing on retraining and upgrading current teacher forces as well as retraining people to fill existing job openings.

We had testimony from different groups that indicated that in many States, 35 to 40 of the States do not have sufficient science and mathematics teachers.

Furthermore, in many instances they have unqualified and uncertified people teaching simply because they do not have the proper certification.

They also were concerned that we start putting some emphasis on the elementary level. We have a tendency to think in terms of math and science and then talk about secondary and postsecondary education.

The unfortunate part about that is that if the youngster's appetite is not whetted in kindergarten, first grade, second grade, and third grade, certainly we are not going to turn him on when suddenly he finds himself in the seventh or eighth grade.

We also find that as many as 16 percent of the elementary school teachers have little background in math and science education.

So our hope is to give them an opportunity to whet the appetites of those youngsters in the areas of math and science long before they reach the secondary level.

The one other area that the testimony seemed to talk about was the need to develop and expand creative involvement in private sector in-school programs. I think this bill helps that and, as I indicated in committee, I think the Ways and Means Committee can help us eventually to get more involvement from the private sector.

So with that in mind, the question then is, if these are the problems, what do we do and what is our responsibility on the Federal level.

Our responsibility, as we decided in the Education and Labor Committee, is in part A and part B, and that is what I am going to talk about.

First of all, we decided that with $250 million, we would try to do the very best job possible to distribute this money to the States according to school age population, State wealth, and State per pupil expenditures, and then 75 percent of the money within that State would be allocated to schools on the basis of chapter 1 population.

We also indicated that we would try to focus on in-service teacher training. We would encourage joint programs with other schools or State-operated programs and the additional 25 percent of the money would be for State-run programs.

Of that 25 percent, we indicated that one-fifth of that must be used for bonus incentive matching grants to fund creative programs.

There are a lot of school districts that are doing new things that are working that are helping us along this line and this would be an incentive for them to move ahead, and others to try to duplicate and even improve upon some of the new things that are being done to improve literacy in math and science.

□ 1345

We would also then emphasize in-service teaching training and the funding of summer institutes. In part B we say that we will use $50 million for postsecondary assistance. National teaching scholarships would receive $20 million, for 5,000 scholarships which would be expanded to 10,000 awards that would be given out between now and 1985. This would help to bring new blood into teaching math and science. We would use also $7.5 million for postsecondary improvement. Competitive grants for program upgrading; we would use $17.5 million for summer institutes to upgrade current teachers including elementary teachers and $5 million for research.

I think that we have to be careful as we go through this exercise today, we have to make sure that we do not expand this program when we are talking about limited funds. If we do, then, of course, we are going to try to do all things for all people and end up doing nothing for anyone. We have very limited funds. These are the areas that are important, these are the areas of concern that the general population and those who are in a position to know who testified before us focused upon. I think our emphasis must be on science and math literacy for the entire population. We basically had programs in the past that zeroed in on making the elite in math and science more elite. We were successful in doing that. Now we have to bring the majority of the population to a reasonable level of math and science literacy. And I would hope that we would resist expanding the program today and I would hope that we would get overwhelming support to move ahead with this particular program.

The CHAIRMAN. The gentleman from Pennsylvania has consumed 7 minutes.

Mr. FUQUA. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from New York (Mr. LUNDINE) a member of our committee.

Mr. LUNDINE. Mr. Chairman, in recent years, it has become increasingly evident that the United States is falling behind in mathematics and science education. In my view, failure to address this problem has severe implications for our ability to revitalize the economy of the United States. For this reason, I rise in strong support of H.R. 1310, the Emergency Math and Science Education Act of 1983, which I believe, is the first step toward addressing this central national problem.

As a member of the Science and Technology Committee, I have had the opportunity to consider this legislation and to contribute to the bipartisan compromise between the Education and Labor, and the Science and Technology Committees. Few would disagree that the bill we are considering here today is much improved over that which was originally introduced. I commend Chairman PERKINS and Chairman FUQUA for their leadership and diligence in guiding this measure through their respective committees.

As reported, H.R. 1310 proposes a program of initiatives to be administered by the Department of Education and the National Science Foundation. The legislation is specifically designed to address the serious problem of quality and quantity of science and math teachers at all levels, outdated resources and materials for use by teachers—including course content, computer and instructional equipment—quality and quantity of technically trained personnel—including engineers—to meet the demands of industry, and the lack of citizen education on the impact of science and technology on our society.

Solving the problem in the long run significantly depends on our ability to spark interest and motivation in students beginning in elementary school and continuing through graduate education. Teachers are the catalyst in the education process and a major factor in efforts to stimulate students to pursue the study of science and math. For this reason, the shortage of qualified teachers of math and science at all levels is particularly critical

H.R. 1310 addresses this problem in part, by providing assistance for inservice teacher training, national teaching incentive scholarships to encourage talented students to pursue careers in math and science education, and by the return to summer institutes for upgrading teacher skills and knowledge. I have been very impressed with the reported success of the summer institutes which were administered by the National Science Foundation during the sputnik era and I am hopeful that this success will be repeated under this provision.

While I am pleased with these provisions, I am concerned that the problems of retaining qualified teachers is not adequately addressed. Additional consideration must be given to ways to provide incentives for these teachers to stay in the teaching profession, rather than leaving for more financially rewarding positions in the private sector. The Federal Government may well have a role to play in providing assistance to State and local education agencies for the purpose of rewarding teacher excellence. In my view, it is time for Congress to examine this difficult question.

Finally, I am very pleased with the creation of the engineering and science personnel fund within the National Science Foundation and, more importantly, with the priorities established for expenditure of these funds. In addressing the problem at the postsecondary level, these priorities give important recognition to the role of community colleges, as well as 4-year institutions, in improving the quality of math, science, and engineering education.

Our experience during the Sputnik era demonstrated that we have the ability to significantly improve the quality and quantity of scientific personnel to continue our research and development activities. This legislation will once again make math and science education a national priority and will stimulate continued achievement in science and technology. In addition, this legislation recognizes the growing importance of citizen education in science and technology. All citizens, not solely those pursuing scientific careers, require a greater understanding of science and technology in order to make decisions affecting their private lives and also regarding public policy issues. H.R. 1310 recognizes this need and makes citizen education one of our priorities.

We must not underestimate the importance of science and math education to the country's industrial competitiveness. Innovation and improved productivity performance increasingly depends on the development of our human resources and the ability of the work force to understand and adapt to technological change. Most of our international trade competitors, like Japan, continue to place a greater emphasis than the United States on science and math education at all levels.

I am confident that this legislation will begin the task of improving science and math education in this country, enhancing our ability to revitalize the economy, and I urge its adoption by the Congress.

Mr. WINN. Mr. Chairman, I yield 5 minutes to the gentleman from New Hampshire (Mr. GREGG) who has been very instrumental in moving this bill to the floor.

Mr. GREGG. Mr. Chairman, as was pointed out by the prior speaker, Mr. LUNDINE, the issue of science and math education in our school systems is probably one of the most critical issues this country faces today. We are as we move into the eighties looking at a national economy which will be 50 percent reliant on high technology; our ability to compete in international markets is moving from a hard-goods approach to a high-technology approach. We are finding more and more our country depends for its lifeblood on international trade and also for its own vitality within the United States, on the high-technology business.

So we now find ourselves confronting the fact that as we move into this age of high technology we are producing less and less scientists, less and less people who are familiar with and capable in handling math.

Some statistics have been related here today but I think a few should be reviewed because of their significance and how they outline the depth of this problem.

Only 13 percent of all the high school students that graduate are prepared for engineering curriculum in college. Only 34 percent of recent high school students have taken 3 years of math. Only 8 percent have taken calculus. Less than 20 percent of high school students have taken 3 years of science.

Only one-sixth of all high school students have taken junior or senior math courses and two-thirds of the U.S. high schools require only 1 year of math and science.

This is the problem with the curriculum. In the role of teachers, it is even more severe. Only 78 percent of the current demand for science and math teachers is being met.

Out of the 45 States polled by the National Governors' Conference, 43 said they had a shortage or a critical shortage of math-science teachers.

In fact, there has been and is projected to be, a 4-percent drop in math-science teachers in 1980 and 1981 and there is projected to be a 35-percent drop in math-science teachers by the year 1992.

In addition, since 1972 there has been a 77-percent decline in the number of qualified secondary school math teachers nationwide, who are prepared in college-teacher programs and 26 percent of all math-teaching positions are filled by noncertified teachers and close to 20 percent of all high school science teachers are nonscience majors in college. Of all the present math-science teachers, 79 percent have not completed 10-hour workshops or courses in their subject areas in over 10 years. Even more startling is the fact that we are in a computer age and yet 69 percent of our math-science teachers at high school level have never attended a computer course.

This bill is presented to this House as a way of addressing this problem. But the simple fact is that this problem cannot be addressed by the Federal Government alone. It is really a problem which must be addressed at the local level. We can, by a bill such as this, try to move local school districts into coming forward with their own approach toward improving their math-science education. But when you come right down to it, the bottom-line decision has to be made by the local school board as to how it compensates the math and science teachers, because this bill skirts that fundamental issue. And that is the issue which is most affecting math and science education in our school systems. Specifically, the average teacher today is paid between $9,000 and $10,000. Yet the average engineering student or math specialist coming out of college can obtain a salary range of anywhere from $15,000 to $30,000. The economics of the situation are such that we are simply draining off from our school systems our qualified and capable math and science teachers.

And yet we refuse to be willing to address that fundamental concern, the payment and the compensation of the local math-science schoolteacher.

Mr. GOODLING. Mr. Chairman, would the gentleman yield?

Mr. GREGG. Mr. Chairman, I would be happy to yield to the gentleman from Pennsylvania.

Mr. GOODLING. I thank the gentleman.

As I said in my testimony and in our committee I think that is an area that must be faced. It is one of the biggest problems I think the Ways and Means Committee has to get involved in, because I think you have to go the tax-incentive route because you could never differentiate between an English and math teacher, or you would never have any kind of continuity or any kind of cooperation in a school district. I have some experience along that line. But you could do it with tax incentives.

Mr. GREGG. I appreciate the gentleman's comment.

The CHAIRMAN. The time of the gentleman from New Hampshire has expired.

Mr. GREGG. Mr. Chairman, would the gentleman yield?

Mr. GOODLING. I would be happy to yield 1 minute to the gentleman from New Hampshire.

Mr. GREGG. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I must unfortunately disagree with the gentleman, because in my opinion the issue is compensation. It is like any other situation where we have to recognize the law of supply and demand. The simple fact is that the demand for the math-science teacher is much higher than it is for

other teachers and we are going to have to pay them at the local level if we are going to maintain them in the math and science area.

Mr. PERKINS. Mr. Chairman, I yield 5 minutes to the gentleman from New York (Mr. BIAGGI).

Mr. BIAGGI. Mr. Chairman, I rise to join with my colleagues to lend my strong support to the legislation before us, H.R. 1310, the Emergency Science and Math Education Act.

As an original cosponsor of this legislation and a member of the House Education and Labor Committee where this bill was considered, I am pleased that the critical need for qualified math and science instructions in our schools has been recognized in such expeditious fashion. In hearings held in our committee last year and early this year, we heard countless witnesses testify to the need for emergency action. President Reagan, in his state of the Union address echoed this sentiment.

This bill before us, H.R. 1310, goes well beyond what the President has proposed—and rightly so. The case for improved math and science instruction is well documented:

In my own State of New York, the number of teachers newly certified for physics instruction dropped 50 percent and dropped 69 percent for math teachers between 1975 and 1979;

The private sector has siphoned off many of those prepared in college to be secondary and postsecondary instructors; high school physics teachers now making $12,000 a year are being offered private sector jobs at an average of $18,000 to $20,000;

Recent figures from the National Science Foundation show that 16 percent of all elementary and secondary teachers were inadequately prepared to teach math and science to students;

This shortage in math and science teachers, according to the New York State Regents, has been in existence for an unbelievable 30 years.

This shortage in teachers has had a severe impact upon curricula in our elementary and secondary schools. The Soviet Union requires all citizens to complete 10 years of training in math and high-technology fields, including 5 years of algebra, 2 years of calculus, 5 years of physics and 4 years of chemistry. More than 5 million Soviet students have had calculus by the time they have graduated from high school. By contrast, in the United States, only 500,000 have had the subject in the first year of college. In Japan, 25 percent of secondary school class time is spent in science and math areas including physics, biology, chemistry, algebra, geometry, calculus, and statistics. More importantly, Japan graduates as many engineers as the United States—with half the population. At the same time, the demand for highly trained personnel in these fields is increasing. The U.S. Department of Labor estimates that 250,000 more engineers will be needed by 1990 than are presently employed. In order to meet this manpower shortage, our young people will have to begin a conscious effort to take math and science courses from the seventh grade on.

In my own city of New York, the demand for math and science personnel is especially critical. We will need at least 1,000 new math and science teachers for the next school year. If we cannot fill this gap, our children, and their future educational—as well as earning potential—will be severely hampered.

This bill addresses, in a comprehensive fashion, the need to upgrade current instruction efforts in schools—as well as encourage, at the college level, young people to follow these professions. Working closely with the Science and Technology Committee, and their distinguished Chairman DON FUQUA, we have also provided for a $400 million, 4-year program to insure an adequate supply of technical, engineering, and scientific personnel through the National Science Foundation. I commend Chairman FUQUA for his efforts in this area and for his efforts to bring this bill before us in such timely fashion, along with my own chairman, CARL PERKINS.

This bill also recognizes that the program production and distribution capabilities of this Nation's noncommercial educational television system can provide science and mathematics telecourses to improve the quality of instruction and levels of achievement of students and increase the supply and qualifications of elementary and secondary teachers on a wide scale and in a cost-effective manner. Over one-third of all U.S. classrooms are regular users of instructional programing, produced in close cooperation with teachers; most of the limited number of science and mathematics courses are designed for elementary class use. Inservice training courses and college credit courses have been developed in response to State and local needs and are distributed through State and regional educational television networks as well as the Public Broadcasting Service's Adult Learning Service and the Agency for Instructional Television. These services are particularly valuable for teachers without easy access to campuses, due to employment schedules, domestic demands or both. Little if any programing has been specifically developed to improve the knowledge of existing science and math teachers or to recertify teachers of other subjects. Local and State educational agencies may combine funds they receive to develop, produce and distribute educational television programs to further the objectives of this legislation.

I am pleased to note that the public station of New York City, WNET, has played an important leadership role in this area. With funding support from the New York State Department of Education, WNET, in conjunction with WNYE and WLIW has created a three-channel program service for elementary and secondary education in the State. In addition, WNYE is the only station programing prime time primarily for adult education—including college credit courses.

For the benefit of my colleagues, I wish to insert into the RECORD an outline of this legislation and a brief description of its components. I am also pleased to note that my own city of New York will receive some $14 million under this proposed legislation and the city of Yonkers, which I am now proud to represent jointly with Congressman OTTINGER, will receive approximately $100,000 under H.R. 1310:

EMERGENCY MATHEMATICS AND SCIENCE EDUCATION ACT

ELEMENTARY-SECONDARY

$250 million for '84 "such sums" for '85.

Grants to the States with at least 75% passed through to local school districts according to Chapter 1 allocations.

Local funds to be used for teacher training and retraining, and (only after all training is completed) to be used for any other activity to improve mathematics and science.

State funds to be used for teacher training & retraining, administration, & incentive grants to school districts to cooperate with private industry.

Private school children must participate in programs, & efforts made to increase women & minority enrollments.

SCHOLARSHIPS

$20 million for '84 "such sums" for '85.

5,000 full scholarships in '84 for undergraduate & graduate students who intend to become science, mathematics & foreign language teachers; increases to 10,000 in '85.

30 percent of scholarships set aside for current teachers who want to go back to college.

Recipient must spend two years as a teacher for each year of scholarship.

Selection of recipients made on basis of merit.

SUMMER INSTITUTES

$17.5 million for '84 "such sums" for '85 (Ed & Labor); $20 million for '84, $20 million for '85 (Science & Tech.).

Department of Education (Ed and Labor); National Science Foundation (Science & Tech.).

Summer institutes to upgrade skills of current teachers.

POSTSECONDARY ASSISTANCE

$7.5 million for '84, "such sums" for '85 (Ed & Labor); $10 million for '84, $10 million for '85 (Science & Tech.).

Department of Education (Ed and Labor); National Science Foundation (Science & Tech.).

Grants to improve programs of science, mathematics and foreign languages in colleges.

RESEARCH

$5 million for '84, "such sums" for '85.

Department of Education (Ed & Labor); National Science Foundation (Science & Tech.).

Grants for research in science, mathematics and foreign languages.

TEACHER INCENTIVE GRANTS

"such sums" for '85 (Ed & Labor); $5 million for '85 (Science & Technology); grants to individual teachers of science & mathematics to improve programs in their classrooms.

In sum, Mr. Chairman, I believe we should adopt this legislation as soon as possible so that we can begin our efforts to upgrade the science and math skills of our Nation beginning the next school year. This is a timely response to a growing national problem. In 1958, Congress recognized a similar deficiency in our Nation's manpower needs and we passed the landmark National Defense Education Act in response to the launch of the Russian Sputnik. Today, the Emergency Science and Mathematics Act is a similar recognition that the long-term strength and security of this country rests with a cadre of skilled manpower. This legislation will insure that the United States remains second to no one in the world. I urge my colleagues to join with me in supporting its passage.

□ 1400

Mr. GOODLING. Mr. Chairman, I yield 3 minutes to the gentleman from Missouri (Mr. COLEMAN).

Mr. COLEMAN of Missouri. Mr. Chairman, over the past few weeks both the Education and Labor Committee and the Science and Technology Committee have been deliberating over the content of a math and science bill. We have had our differences over the types of programs to include in this bill, and the price of the bill, but one thing we do not differ on is the need for this bill.

In 1981, the Subcommittee on Postsecondary Education held a series of hearings on problems facing teachers today in general. It was at that time that we began to learn of the shortages of math and science teachers. And since 1981, the evidence of this shortage has grown, and the examples are becoming more dramatic.

Because of the shortage of persons trained in math, science, engineering, and other technical fields, America is losing its position as the leader in the development of new products and technologies. In addition, our citizens are rapidly becoming unable to deal with the computer age, in jobs or at home, and soon many of us will be computer illiterates. Engineering jobs go for the asking because we failed to inspire our students to enter mathematically or scientifically oriented courses of study. By acting on H.R. 1310, we are focusing on the problem and taking the first step to reverse this trend.

What bothers me about our approach in H.R. 1310 is the cost of the bill. When the bill was first brought to our committee, its price tag was $300 million. Shortly thereafter, our bill was appended to the Science and Technology Committee bill and overnight the price jumped to $400 million. Then, the Science and Technology Committee reported out the bill and the price became $425 million.

The proposal originally submitted by the administration included $50 million for a new math and science teacher training initiative.

At just the point where the President's plan for economic recovery is beginning to work—interest rates and inflation are dropping—we are adding $425 million more to the Federal deficit in one year.

I am also concerned about the effectiveness of the programs in the bill to actually solve the problems of teacher shortages and bring new math and science teachers into the classroom. I will attempt to target the funds more directly in this area with an amendment.

It is for these reasons that I do not totally embrace this bill. While supporting its intent, I question its method and funding level and hope we will be able to address some of these concerns through amendments this afternoon.

Mr. FUQUA. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Pennsylvania (Mr. WALGREN), a member of the committee.

Mr. ALBOSTA. Mr. Chairman, will the gentleman yield?

Mr. WALGREN. I yield to the gentleman from Michigan.

Mr. ALBOSTA. Mr. Chairman, we are facing a crisis in education. This country has fallen seriously behind in the training of math and science teachers that will educate our next generation of engineers and mathematicians.

According to a survey of the National Science Teachers Association, some 32,000 classes, involving 640,000 children, in science and mathematics for the 1982-83 school year had to be canceled because of the lack of teachers and resources. Less than two-thirds of all high school districts have physics teachers and only 31 percent of all high schools offer courses in calculus.

Last year, the United States graduated 30,000 engineers, Japan graduated 70,000 and the Soviet Union graduated 300,000 engineers. It is no wonder we are falling behind in the development and use of innovative technology to increase our productivity and put the United States back to work. Good math and science skills are necessary if this country is to meet the economic challenges of the 1980's, both at home and aboard.

H.R. 1310 will provide the funds to train math and science teachers at all levels of our education systems. Scholarships will be made available to students in college to pursue further math and science training. This bill will give us the tools to graduate a generation of highly trained mathematicians, engineers and scientists. Through these efforts we can take a major step forward to restoring American industrial strength and competitiveness.

We in the Congress have the responsibility to provide these important programs to our Nation's students and teachers and at the same time assist our Nation in recovering from double digit unemployment. The training of math and science students must be increased and therefore I urge my colleagues to vote for H.R. 1310, the Emergency Science and Mathematics Education Act, so that we can get on with the job of science and math education in this country.

Mr. WALGREN. Mr. Chairman, I would like to say how important I think this piece of legislation is. There is no question that the crisis in science and math education is real. The statistics that are cited all around deserve to be thought about and thought about deeply. Two-thirds of all American high schools require only 1 year of science and math. When you compare that to the comparable training in Japan where all college bound high school students take 4 years of math and 3 years of science, you can see that we are going to have difficulty in any competition in that area.

In the Soviet Union, high school students take 5 years of physics and 4 years of chemistry. They graduate 5 million high school students with training in calculus. In the United States we graduate only 500,000.

We should underscore the fact that if we are not educated in math and science at the start of our secondary education, we cannot catch up later on.

I, for one, had a most difficult time with calculus in my second year in college because I had absolutely no exposure to it before. I am afraid I may be living testimony to the fact that those of whose education does not introduce us to math and science in high school and before have no real opportunity to catch up later. The real decisions about the breadth of science and technological skills in our people are made well before they graduate from high school.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. WALGREN. I am happy to yield.

Mr. PERKINS. First, let me state that the gentleman made a tremendous contribution to this legislation as chairman of the subcommittee in the Science and Technology Committee.

I want to compliment him. I think he deserves the compliments of all the Members of the House.

One of the great leaders in the Congress today is the gentleman's chairman, DON FUQUA. We all worked together in connection with this bill, and it is a piece of legislation that I think all of us should be proud of.

Let me conclude by saying that I compliment the distinguished gentleman.

Mr. WALGREN. I appreciate the gentleman's remarks more than I can say.

Mr. SISISKY. Mr. Chairman, will the gentleman yield?

Mr. WALGREN. I am happy to yield to the gentleman from Virginia.

Mr. SISISKY. Mr. Chairman, hundreds of media stories in the last year have centered on the current post-Sputnik math and science crisis in the United States at a time when projected labor forces needs show strong growth in jobs areas such as engineering, computer work or electronics, all of which require math and science skills, U.S. students are taking fewer courses in these subject areas than ever before.

Statistics comparing years of training in math and science between U.S. students and their counterparts in other competing countries such as the U.S.S.R., West Germany or Japan—reveal a widening gap, with our students coming out at the bottom end of the scale.

Feeding into this problem is the shocking shortage of science and math teachers across the country. Many teachers neither specifically trained for nor certified in math and science, are pinch-hitting in the classroom in these subject areas; this, even as math and science are being hailed as the Nation's top educational priorities. This situation hurts teachers and students alike, and must be addressed to adequately respond to technological, economic or national security challenges currently facing us.

It is certainly most appropriate that the Congress address this problem with a plan to improve the situation.

I strongly endorse H.R. 1310 largely because it is an immediate short-range response, with resources, directed to levels that can begin to make a difference.

I applaud the effort of the committees involved, but, would urge that the committees also examine H.R. 881, as a more comprehensive solution to the math/science problem faced by our Nation.

Mr. WALGREN. Mr. Chairman, there is one piece in this bill that I would like to focus on that I think has tremendous potential to make a great contribution to solving our economic problems. That is the particular provision for matching grants, $20 million from the Federal level, $20 million from local, State, and private levels of our society, to provide help for community colleges and technical schools to establish model instructional programs and to do other things, like improving their faculty and upgrading equipment and instrumentation, all for the purpose of technician training.

The truth of the matter is that we face an incredible unemployment problem in this country as new computer controls, robotics, and automation spread with a rush across our economy.

It has been said that this change in our work place will be more profound than any other economic change in our history except for the introduction of the tractor to American agriculture; but when the tractor changed the face of agriculture, nobody really asked how many unemployed horses there were.

If we are to survive the broad structural unemployment that will accompany this change, we are going to have to provide in advance the training for technicians to participate in that future economy.

I think it is most important to realize that the programs that can be successful in this area have got to come from the local level.

The magic in this particular portion of the bill is that funds will be provided for proposals made from the local level, from the community colleges, and from the private sector.

Clearly, we do not have enough resources on the Federal level to solve this problem. But that means we must change the institutional relationships to make the best use of our resources where they are. With respect to access to training with state-of-the-art instruments and equipment, we do not have even a fraction of the needed funds. There is not that much government money, but we can change the institutional relationships. We can put students into the businesses and the private sector where the instruments now are. This bill will help find creative ways to provide the training and experiences to develop, the trained technicians we will need. And perhaps the next time the President holds up the want ads, there will be plenty of takers for those jobs that we hope will be present in our economy.

Mr. WINN. Mr. Chairman, I yield 5 minutes to the gentleman from Wisconsin (Mr. SENSENBRENNER), a very active member of the committee.

Mr. RUDD. Mr. Chairman, will the gentleman yield?

Mr. SENSENBRENNER. I yield to the gentleman from Arizona.

Mr. RUDD. Mr. Chairman, I rise in opposition to this sloppy math and science bill.

Mr. Chairman, what started out as a good idea, which originally was to initiate an upgrading of math and science education around the Nation, has been diluted, deemphasized, and significantly distorted in the bill under consideration, H.R. 1310.

In his state of the Union message, President Reagan said something with which most of us would readily agree. As part of a four-point plan to improve education, he offered, in his words:

> A quality education initiative to encourage a substantial upgrading of math and science instruction through block grants to the States.

To carry out this policy, the President's budget included a $50 million block grant to the States and an 18-percent increase in the 1984 budget for the National Science Foundation.

Put simply, the President agreed that we should do something at the Federal level to spark State and local education agencies into re-emphasizing math and science training, primarily in the area of teacher retention in these fields.

The bill before us today defeats that purpose by creating a new $400 million spending program, dragging the Federal Government further into the realm of local education, and includes programs not even within the same orbit as math and science.

What, for instance, do foreign language grants, as contained in H.R. 1310, have in common with getting more science and math teachers back in the classroom? Further, why should we expand the role of the Department of Education at the expense of National Science Foundation, which is already in the business of promoting science programs at private and public education institutions around the country? I share the view of many that this bill could result in a further "brain drain" in the math and science teaching fields as opposed to focusing on the problem of teacher retention.

I oppose this bill, H.R. 1310, as passed out of committee, and I urge adoption of the amendments to bring this legislation into line with the original objective of providing incentives to teacher retention in the math and science fields.

Mr. SENSENBRENNER. Mr. Chairman, one of the reasons why this country is facing a crisis in mathematics and science education is due to the inability of States and local educational agencies to retain and obtain qualified science and mathematics teachers at the secondary level. This assessment is shared by the National Science Board's Commission on Precollege Education in Mathematics, Science and Technology. The Commission, established in April 1982, by the National Science Board, the policy-making body of the National Science Foundation, was instructed to define a national agenda for improving mathematics and science education in this country. On October 18, 1982, the Commission, in its first formal report entitled, "Today's Problems, Tomorrow's Crises," identified four problems that are contributing to the decline in

student achievement levels in math and science.

Frist, inadequate equipment and facilities;

Second, the need to modernize our math and science curriculum; and

Third, the failure of our current instructional methods to take advantage of the advances in technology, such as computers.

These identified problems are addressed by this legislation. However, the fourth identified problem—the need to obtain and retain qualified math and science teachers—is ignored by this bill.

The significance of this fourth identified problem cannot be understated.

The Commission, in its report, stated, "Therefore, the documented shortage of superior teachers must be considered a prime contributing cause of decreasing student participation and achievement in mathematics, science and technology."

The statistics bear out the Commissions finding.

In 1981, 43 States, out of 45 responding, reported a shortage of mathematics teachers.

For physics teachers, 42 States reported shortages.

From 1971 to 1980, student teachers in science and mathematics decreased threefold in science and fourfold in mathematics, and only half of them have actually entered the teaching profession.

Twenty-five percent of those currently teaching have stated that they expect to leave the profession in the near future.

Five times more math and science teachers left teaching in 1980 for employment in nonteaching jobs than left due to retirement. If the present exodus of math and science teachers from secondary schools continues, the Nation will suffer a net loss of 35 percent of the total by 1992.

The Commission's Cochairmen, William T. Coleman, Jr., and Cecily Cannan Selby issued a warning in the Commission's letter of transmittal, "The problems summarized in our report—if left unresolved—will escalate in the years ahead." We cannot ignore these warnings any longer.

Therefore, I will be offering at the appropriate time an amendent to begin to address this problem.

The amendment would establish a fund of $50 million, under the administration of the National Science Foundation, from which States would be eligible to receive grants. These grants would be used by a State, either directly or through local educational agencies to retain and increase the number of math and science teachers at the secondary school level through State-developed programs, including, but not limited to, salary bonuses, summer employment, and scholarships for college undergraduates and holders of a bachelor degree.

When this amendment was presented to the Science and Technology Committee, the major argument against this amendment appeared to be that the Federal Government was intruding into the procedures by which teachers' salaries are set at the State or local level. This argument is categorically untrue. Not one dime of the money is mandated to be spent on salary bonuses. That decision will be made at the State or local level, depending upon local needs and problems. This amendment merely allows the States the ability to plug any holes in their dikes.

For the betterment or our children's education, I urge the adoption of this amendment.

The CHAIRMAN. The Chair would like to state that the gentleman from Kentucky (Mr. PERKINS) has 11 minutes remaining, the gentleman from Pennsylvania (Mr. GOODLING) has 15 minutes remaining, the gentleman from Florida (Mr. FUQUA) has 17 minutes remaining, and the gentleman from Kansas (Mr. WINN) has 16 minutes remaining.

The Chair recognizes the gentleman from Kentucky (Mr. PERKINS).

Mr. PERKINS. Mr. Chairman, I yield 4 minutes to the gentleman from Montana (Mr. WILLIAMS).

Mr. WILLIAMS of Montana. Mr. Chairman, it would be a mistake to think of the present crisis in math and science education as simply one facing only American education. Yes, America faces a crisis in math and science education, a severe and growing shortage of math and science teachers, and the following numbers bear this out:

Last year in New Hampshire, only one college graduate planned to become a mathematics teacher. Now, I know New Hampshire is small, but she is not that small.

At the same time in New York, the Nation's second most heavily populated State, only 32 college graduates planned on careers as junior or senior high school math teachers. With a junior and senior high school enrollment of well over 1 million students, 32 teachers will not teach much math.

And in the State of Texas in 1982 only seven college graduates became math teachers.

As you all know, similar figures can be cited for almost all States. This shortage is very real and very serious.

We can expect even more calamitous shortages in the future as two serious demographic trends begin to interact to exacerbate the present situation. One trend is teacher age; the other is school enrollment. In general, due to retrenchment and drain off by industry, the present teacher supply is graying rapidly. Math and science teachers, on average have about 16 to 18 years of teaching experience, and consequently will begin retiring over the next decade or so. At the same time, school enrollments, which are currently down, are expected to climb again in the 1990's. This climb in school enrollments will parallel the large-scale retirements of math and science teachers. Thus, in the next 15 to 20 years, the crisis in math and science could reach catastrophic proportions.

At the postsecondary level, fewer individuals are being trained for research and teaching positions in the sciences and in engineering. In most of the sciences, the number of individuals receiving advanced degrees is down. Likewise, in engineering, the number of unfilled faculty positions as of fall, 1981, was 1,650. One obvious result of such shortages will be increased teacher-student ratios, which frequently signal poorer quality education. But, less obvious perhaps, is the linkage between the quality of basic research in the sciences; in engineering; and in subsequent applied developments that have individual, economic, and defense-related impacts.

Basic research provides an important foundation for this country's economic growth and development. For example, biological and psychological research has led to significant applications in health, in industry, and in agriculture. Without a continuous infusion of new scientists/researchers, this Nation's economic growth will certainly suffer.

While one goal of education is to acquire knowledge, an equally important goal is to apply knowledge toward the enhancement of one's own well-being as well as the enhancement of the Nation's well-being. That is, an education should help the individual better himself or herself and at the same time contribute to the collective national good. In this sense, education is inextricably bound up in the Nation's economy.

As long as our economy was characterized by large labor forces, by reliance on heavy manufacturing, and by little foreign competition, the direct relationship that exists between education and the economy was masked by continual increases in our gross national product. Our economy is undergoing some major structural changes, causes by a decreasing need for large labor forces, for heavy manufacturing, and from increasing foreign competitiveness. Consequently, the importance of the quality and content of education to economic productivity is now becoming readily apparent. And, while this is true with all areas of education, it is especially true with respect to math and science education because these two content areas provide the foundation for our rapidly developing high-technology-based economy.

According to data from the Brookings Institution, technology as a factor of productivity comprises 38.1 percent, the largest component. In the United States, productivity continues to drop. The continuing decline of math and science skills in individuals who will comprise the labor force suggests that U.S. productivity will continue to decline unless the math and science problem is satisfactorily addressed.

Data from two divergent sources indicate the impact of poorly trained employees on productivity: quality control and consumer costs. AT&T now spends $6 million a year to train 14,000 employees in basic arithmetic and writing during office hours, and a survey of over 2,000 corporations, published in December 1982, revealed that mathematics was consistently noted as a deficient skill across a wide range of job classifications. Given that the most rapidly growing industries in our economy are high-technology and energy-related industries, all requiring math and science backgrounds, continued reliance on employees with poor educational backgrounds will not only likely increase consumer costs significantly but, more importantly, will likely accelerate the United States already-eroding competitive economic position.

Lest my words sound like mere rhetoric, consider the case of our neighbor, Japan. Once characterized by a lack of valuable minerals, arable land, and financial resources, Japan today is in direct competition with the United States. Japan's rapid economic gains have enabled her to surpass the United States in a number of areas. Some reasons for this may be related to differences in how well Japanese children are educated, especially in the math and science areas.

Japanese 13-year-olds have the highest achievement scores among 12 major industrialized countries, including the United States.

One-fourth of all class time in grades 7–9 is spent on math and science content.

Japanese high school students normally take three natural science courses and four math courses.

Only 8 percent of Japanese students fail to graduate from high school.

Whereas, in the United States, the record is considerably poorer.

The relationship between math and science education and defense is also a critical one. The defensive armaments we develop and maintain are characterized increasingly by reliance on sophisticated electronic, chemical, mechanical, and information-based designs. Individuals who develop, maintain, and operate such equipment must be well educated in math and science. Given current conditions in math and science education, it is sobering to consider that technology is the only military advantage we have over the Soviets.

One critical but often overlooked aspect of the present crisis in math and science education is that of public awareness. Americans of all ages need to be made aware of the vital role math- and science-related activities play in their personal lives and in their work opportunities so that they can contribute positively to this Nation's economic productivity. A part of this bill will provide for such efforts, and I want to thank my colleage, Mr. FUQUA, and the members of the Science and Technology Committee for including my "Public Understanding of Science" amendment in title II of this bill and for making citizen awareness one of their priorities.

In the late 1950's, America's formation of a national math and science educational program was generated out of fear of the Soviet Union's technological superiority, and that fear overrode the need to look at the more direct relationship that exists between education and economic development. Today, we need not look abroad for our motivation. We now can see clearly the need to provide policy that is both comprehensive and focused, and which will realistically address the various interacting factors comprising this Nation's math and science problems; for educational and scientific reasons, for defense reasons, but most of all—to promote our general economic welfare.

Mr. GOODLING. Mr. Chairman, I yield 3 minutes to the gentleman from Wisconsin (Mr. GUNDERSON).

Mr. GUNDERSON. Mr. Chairman, the availability of and interest in a quality, well-taught math and science education has dwindled for the second time in the last three decades. The creation of the National Defense Education Act in 1958 and the leadership of President Kennedy in the 1960's was a reaction to a situation as vital as the one we face today.

The American response to the Soviet success in space with Sputnik clearly must be equaled by our Nation in the 1980's. While the motive in that time stood upon the Nation's perceived national security shortcomings, our present dilemma encompasses both our defense and economic well-being. The shortage of both qualified teachers and students in the math and science fields is now well apparent and the ramifications of the problem appear expansive.

The scope and depth of the problem is well known, and, relatedly, a significant disagreement on a proper solution has become apparent. A myriad of facts and statistics are available which clearly demonstrate the problem the President, Congress, and the Nation must solve. For example, at the elementary and secondary level, a national survey indicated that of 45 States responding, 43 reported shortages of mathematics teachers, 42 of physics teachers, and 38 of chemistry teachers. At the postsecondary level, the number of freshman intending to major in math and science, and thus the prospective number of teachers in these fields, has declined by 80 percent since 1970.

In my own State of Wisconsin, 30 percent of the secondary schools reported difficulties in hiring new math and science teachers. In addition, of the 31 institutions of higher education in the State, only one graduating physics major indicated an intent to become a physics teacher at the elementary or secondary level. That situation comes at a time when 24 percent of the secondary schools have indicated their intent to increase their science requirements.

The committee hearings have demonstrated that a wide range of suggested solutions are available, ranging from improved assessment and planning, inservice teacher training, summer institutes and workshops, curriculum improvement, undergraduate and graduate scholarships, funds for equipment and materials, to a national study for the improvement of math and science teaching strategies. A complete and immediate solution however, using all of the above, would require billions of dollars. Unfortunately, we continue to confront ever-increasing Federal deficits which preclude such a comprehensive approach. As such, we must target legislation to provide relief to the most-pressing aspects of our mathematics and science education deficiency.

Central emphasis should thus be placed upon the improvement of the caliber of our present teachers in the short run through teacher retraining using inservice teacher training and summer institutes and workshops. In addition, we must also encourage the development of a guaranteed supply of these math and science teachers in the future. While the other math and science problems undoubtedly require attention, the limited amount of funds available dictate a targeted response.

While I strongly support this bill and I commend the efforts of the two committees to deal with the issue quickly, H.R. 1310 will stretch the approximately $400 million authorized to the breaking point. On the other hand, the proposal forwarded by the Department of Education would inadequately attempt to heal only a single portion of our math and science deficiencies. It is insufficient by itself. Although I strongly support efforts to improve foreign language education and training, the inclusion of this discipline in the bill further dilutes the limited funds available.

Our work then, with the passage of this legislation, will be far from com-

plete. Our purposes would be better served through the passage of targeted legislation aimed at solving the most-pressing problems of quality teaching and teacher supply in the near term, and then turning our attention in the future to a more comprehensive approach.

However, we should move on with this legislation and all the hard work it represents. I would urge the other body and any future conferees to work to reduce the number of programs in the bill so that targeting may be accomplished. As such, I urge a positive vote on this important legislation.

Mr. FUQUA. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Oklahoma (Mr. McCURDY) a member of the committee.

Mr. McCURDY. Mr. Chairman, I rise in strong support of H.R. 1310. It is appropriate that the first major piece of legislation considered by the House in this Congress is one that addresses the crisis in science, math, and technical education. This is an issue that affects every sector of society. If not addressed now, our economic, scientific, and military leadership will be eroded beyond repair.

Over the last 2 years I have stood here many times urging my colleagues to support legislation to combat the critical shortage of qualified science and math teachers. Fortunately, my commitment has been shared by many Members of this body. Today, it is my hope and expectation that the great majority on both sides of the aisle will join in a resounding message to America—there is a crisis in science and math education and Congress is about the task of a resolution.

Last spring I chaired a special field hearing on science and math education in my district. The testimony I heard from Oklahoma educators was devastating and reflects the situation nationally. Fifty percent of Oklahoma science teachers are not qualified. In the fall of 1981, only 15 college students took the math or science teacher competency test. Yet Oklahoma anticipated at least 250 vacancies in math and science teaching in 1982. One superintendent said that three out of four of his science teachers were physical education instructors. Another superintendent had 50 applications on file for a science teaching position. Not one of the applicants was certified to teach science or math. Eighty-seven percent of Oklahoma students have never taken trigonometry. Only one-half have taken geometry.

It is our education system that has enabled us to advance faster and farther than any other country in the world. Our future hinges on high technology, but we do not have the science and math teachers to prepare our young people for their roles in a technological world. Our institutions of higher learning have neither the faculty nor the instructional equipment to train our future engineers, scientists, and technicians.

The declining quality of science and math education in the United States is in marked contrast to our industrial and military competitors, as illustrated during our recent committee trip to Japan. After several days of meetings with Japanese officials representing government, education, and private industry, what struck me most was their uniform cooperation. The Japanese have proven that education planning is a vital component of economic planning. They have set high standards of scientific literacy for all Japanese citizens. During the 1970's the Ministry of Education developed a national program to attract and retain high-quality teachers. Since the Diet (the Japanese Parliament) passed a 1974 law to provide higher pay for public school teachers, teacher salaries have increased four times. They have made enormous investments in teacher retraining. The Japanese have high-quality teachers. Their students are performing better than American students on science and math achivement tests. Their gifted young people are pursuing careers in science, math, and engineering.

H.R. 1310 is the important first step toward the revitalization of science and math education in the United States. It recognizes that the key to a quality education is a quality teacher. The bill is focused on attracting well-trained new teachers into the classroom and upgrading the skills of current math and science teachers. H.R. 1310 also establishes a national policy and a set of programs to insure an adequate supply of well-trained engineers, scientists, and technicians to propel America into the technological age.

Half of the math and science teachers in our classrooms are unqualified and teaching with emergency certificates. The primary purpose of the funds in title I, part A, is for inservice teacher training. The bill also reinstates the summer institutes for updating and upgrading teacher skills and knowledge. These extremely popular institutes were a casualty of this administration's budget cuts.

We also need a program to attract new teachers into the classroom. This issue is one that I have rated a top priority for the last 2 years. In 1980, only 55 percent of the college graduates who were prepared to teach math actually went into teaching. In 1981, 43 States reported a shortage of math teachers. Forty-two reported a shortage of physics teachers. Over the last 10 years there has been a dramatic decline in the number of college students earning degrees in math and science education. H.R. 1310 directly attacks this problem. It establishes a teacher incentive scholarship program to encourage young people to pursue careers in science and math teaching. The bill also contains a program to insure top quality undergraduate instruction of these future teachers.

H.R. 1310 is a comprehensive, balanced bill. It provides some of the answers. But as a Congress and as a nation we must not dust our hands and walk away satisfied that we have fully addressed the problem. This legislation does not adequately address the problem of retaining math and science teachers. Math and science teachers can earn 50 to 100 percent more in industry. In 1980, math and science teachers who left teaching for industry employment outnumbered those who retired by five times. If we do not eliminate the salary differential, the people we invest in with H.R. 1310 will apply their skills in industry rather than in the classroom. I have introduced legislation which will be the second step in attacking the technical education crisis. H.R. 836, the Math and Science Education Act, grants a tax credit to high-tech companies that hire math and science teachers during the summer. This initiative would supplement teacher salaries and provide them with hands-on high-technology experience to prepare their students for future jobs. It also grants tax credits to high-tech firms that allow their certified employees to teach math and science part time in the local schools. I urge my colleagues to fully address the crisis in science and math education by cosponsoring and supporting H.R. 836.

I commend my chairman, DON FUQUA, Chairman PERKINS, PAUL SIMON, BILL GOODLING, DOUG WALGREN, JUDD GREGG, and many others who have worked so diligently and quickly to bring this emergency legislation to the floor. I would also like to pay a special thanks to Ms. Suzy Leonard on my staff who has worked tirelessly for the past 2 years on this issue. The time for special studies and task forces is past. Congress must act now. H.R. 1310 is no panacea. But it is a vital first step toward excellence in science, math, and technical education. If Congress does not pass this legislation, the trend toward scientific illiteracy will continue. If we allow that to happen, we will surrender our position of economic and military leadership.

I urge my colleagues on both sides of the aisle to oppose all weakening amendments and to support this initiative so vital to our Nation's future.

Mr. WINN. Mr. Chairman, I yield 5 minutes to the gentlewoman from Rhode Island (Mrs. SCHNEIDER).

□ 1430

Mrs. SCHNEIDER. Mr. Chairman, I rise in strong, wholehearted support of H.R. 1310, the Emergency Mathemat-

ics and Science Education Act of 1983. As a member of the Science and Technology Committee, I am pleased to have had the opportunity to take part in shaping this significant legislation. Through a cooperative effort between Chairman Perkins and the members of the Committee on Education and Labor and Chairman FUQUA and my colleagues on the Science and Technology Committee, we are able to present a bill to the House that I feel goes a long way toward meeting the heavy educational needs of our expanding technological society.

Mr. Chairman, as we enter this post-industrial era, our need for a highly skilled technical workforce is reaching proportions never before imagined. By the year 1990, the demand for scientists and engineers is expected to increase a full 40 percent; 180,000 new jobs will become available in mathematics and the physical sciences while 480,000 new positions will need to be filled in the computer field. Yet, a 1981 survey by the National Science Teachers Association indicates a 65-percent decline in the number of students opting for certification as math teachers. My own commissioner of education in Rhode Island has indicated to me that while Rhode Island is not experiencing a shortage of science and mathematics teachers on the par of other States, there are a good number of teachers presently in the classroom who could greatly benefit from workshops designed to bring their skills up to date in the latest developments within the field. H.R. 1310 will provide these teachers and others like them with the opportunity to refine their knowledge and skills in these rapidly changing fields. The legislation also takes important steps toward providing college students with the necessary incentives for becoming dedicated math and science teachers.

Throughout the hearings held by my committee on H.R. 1310, substantial data came to our attention which clearly documented the severe inequities currently existent in the scientific and technical fields. As a case in point, in 1980, the numbers of master's degrees issued in chemistry varied sharply between men and women, with men receiving 1,287 degrees and women receiving only 444.

I therefore found it necessary to take action to reverse the Nation's present inability to attract sufficient numbers of women and minorities into the scientific, engineering, and technical fields. I am pleased to note that the committee on science and technology accepted my amendment into the final text of H.R. 1310 which insures equal educational opportunities for women, the handicapped, and minorities.

Mr. Chairman while H.R. 1310 by no means provides all the answers to our educational dilemmas, I believe it addresses, with critical urgency, the need for educators, students, and average citizens alike, to take a more active role in becoming technologically literate in today's sophisticated world. We can no longer afford to see our technological preeminence erode—both our economy and our national security depend upon our action today.

I urge my colleagues to lend their support by voting for this timely and significant legislation.

Mr. PERKINS. Mr. Chairman, I yield 3 minutes to the distinguished delegate from Puerto Rico (Mr. CORRADA).

Mr. CORRADA. Mr. Chairman, I rise in support of H.R. 1310, the Emergency Mathematics and Science Education Act. I want to first of all commend Chairman PERKINS and Chairman FUQUA for the intense work they have put into this bill and the speed with which they have taken action on this critical issue.

In my view, H.R. 1310 represents a thoughtful approach to the critical national need to improve the quality of science and mathematics education, and to increase the proficiency of our teachers in these areas.

Numerous studies have documented the decline of student achievement in mathematics and science. Average science and mathematics scores on standardized college entrance examinations have been steadily dropping for the past 20 years.

This decline is not surprising when one considers that secondary students are taking fewer courses in mathematics and science than in past years, and fewer courses are being offered. Although half of all high school students in the United States take no mathematics after the 10th grade, other industrialized nations, particularly Japan and Germany, are placing increasing emphasis on science and mathematics education.

One of the major causes of the decline in the quality of education in science and mathematics is the shortage of qualified mathematics and science teachers. During the 1970's, the number of secondary school mathematics teachers being trained declined by 77 percent and the number of science teachers being trained declined by 65 percent. It has been estimated that about 50 percent of all newly employed teachers nationwide are uncertified and unqualified to teach mathematics and science. This situation is exacerbated by the departure of trained classroom teachers for better paying jobs in industry. Recent statistics released by the National Science Foundation indicate that, nationwide, 16 percent of all elementary school teachers are not sufficiently prepared to provide basic training in science and mathematics.

Our national security and economic future depend to a considerable extent on how well we meet the challenge of training and retraining America's work force to compete in the age of high technology. The problem of inadequate instruction in science and mathematics is not limited to certain States or regions; it is rather, a major national problem. Throughout the country, there are too few qualified teachers and too little modern equipment to provide adequate instruction in science, mathematics, and other technological subjects.

Although most States are making efforts to improve the quality of instruction in science and mathematics, significant improvement on a national level will not occur without substantial Federal financial support. State and local educational agencies simply do not have the resources needed to meet this challenge. Yet, in this era of increasing emphasis on high technology and automation, I truly believe that our economic future depends upon the development of a work force that is literate in science and mathematics. This is why H.R. 1310 is so important to our Nation—it will provide a new source of funds for schools to use in improving—not just maintaining the quality of their programs.

Mr. Chairman, recent profiles prepared by the Puerto Rico Economic Development Administration indicate that much of Puerto Rico's recent economic growth had occurred in the high technology, pharmaceutical, and electronic industries. Yet, many of our science teachers are deficient in the academic preparation needed to effectively teach subjects—such as chemistry, mathematics and physics—which relate to those industries.

Some efforts have been made to address this problem in Puerto Rico. For example, in-service programs are presently being operated by the University of Puerto Rico's Resource Center for Science and Engineering and the Puerto Rico Science Teachers' Association. Although these efforts have resulted in some improvement in the qualifications of science teachers in Puerto Rico, our limited resources have enabled only a small number of teachers to participate in the training.

Funds allocated under H.R. 1310 for teacher training, scholarships, and summer institutes will go a long way in extending the benefits of this type of programs to a much larger base of teaching personnel, and therefore open a range of material to students in our elementary and secondary schools.

Mr. Chairman, I also want to point out the vital importance of provisions in H.R. 1310 to address the lack of foreign language proficiency among our population. Although I believe that we have a real shortage of science and math teachers in the Nation, I also believe that an equally serious problem exists in our national capability for

communication with other countries. I trust that this bill will provide a beginning for increased awareness of the need for knowledge of foreign languages.

I am pleased to be a member of the Education and Labor Committee which has developed this bill and to join with President Reagan in his drive to expeditiously address this need in our educational system. I urge my colleagues to support H.R. 1310 and to join me in my support of this vital piece of legislation.

Mr. GOODLING. Mr. Chairman, I yield 4 minutes to a new, enthusiastic member of our committee, the gentleman from Texas (Mr. BARTLETT).

Mr. BARTLETT. Mr. Chairman, I thank the gentleman for yielding me this time, and I rise in support of the need of this Congress to address the national need. I rise in opposition, however, to H.R. 1310, and I rise in opposition for two reasons:

First, because this bill simply costs too much. This Congress and this country are facing a $200 billion deficit, and this would add $375 million to the deficit. As the gentleman from Illinois (Mr. ERLENBORN) and the gentleman from Missouri (Mr. COLEMAN) had previously told us, the total size of this bill began at $50 million, then it went to $200 million, then to $300 million, and now it is $425 million.

Second, Mr. Chairman, I would submit that this bill does not in fact address the real problem.

I commend my colleagues on the Committee on Education and Labor, the distinguished chairman of the committee, the gentleman from Kentucky (Mr. PERKINS) and the chairman of the Committee on Science and Technology, the gentleman from Florida (Mr. FUQUA) along with my colleagues on both committees, for demonstrating a deep concern about the future of this country by giving a high priority to the problems of American math and science education, and I share their concern about the crisis in math and science education today.

But, Mr. Chairman, I rise to oppose H.R. 1310 because, while the committee showed concern for the problem, the results of this legislation do little to solve that problem.

The crisis in American math and science education, as we all know, is multifaceted, but the immediate and most critical and most widely agreed upon problem consists of two parts: math and science teacher supply and math and science teacher retention in the classroom, and H.R. 1310 does not adequately focus on the pressing teacher supply and retention crisis.

As a member of the Committee on Education and Labor, I submit that this bill spends proportionately too much money on problems peripheral to the shortage of math and science teachers and short-changes the real need of students, and that is the need to keep present math and science teachers in the classroom and recruit and train more qualified teachers in the classroom as rapidly as possible.

In 1983 we faced the prospect of a Federal budget deficit approaching $200 billion, and that deficit requires the resources available for math and science education by this Congress be limited. It would be a better approach, I think, that those limited dollars spent to address the problems of math and science education be focused where those dollars can do the most good, by correcting the teacher shortage.

We have heard all the statistics here today, and in the Committee on Education and Labor and in the Committee on Science and Technology we heard testimony from experts from around this country week after week that 43 States now report a shortage of math teachers, 42 a shortage of physics teachers, and 38 a shortage of chemistry teachers. Witnesses have detailed a 79-percent decline in the number of people preparing to teach mathematics and a 64-percent decline in those preparing to teach science. We have heard that from 1971 to 1980 the number of student teachers in science declined threefold and the number of future math teachers fell fourfold, and that occurred in a decade.

But in spite of this evidence, the programs, in H.R. 1310 with the exception of the very small national teaching scholarships administered in Washington, do not directly add to the stock of new math and science teachers. Despite witness after witness testifying to the critical teacher shortages, H.R. 1310, Mr. Chairman, spends only about 4 percent of its appropriations for fiscal year 1984 on retaining present and training new math and science teachers.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. BARTLETT. I am happy to yield to the distinguished chairman of the committee.

Mr. PERKINS. Mr. Chairman, I want to take a rare opportunity, I say to my good friends on the minority, to compliment the gentleman from Texas (Mr. BARTLETT) who has been so attentive and who has done so much good work since he has been a member of the Committee on Education and Labor. I do not know of anyone on the majority side who studies an issue as thoroughly as the gentleman from Texas.

The CHAIRMAN. The time of the gentleman from Texas (Mr. BARTLETT) has expired.

Mr. PERKINS. Mr. Chairman, I yield 1 additional minute to the gentleman from Texas (Mr. BARTLETT).

Mr. Chairman, if the gentleman will yield, let me say that I very seldom agree with the gentleman, but in his views he always has logic for his reasoning, and I hope that someday we can win him over so that our views may to some degree coincide. I say that because of his thorough study of all the issues involved in any piece of legislation that comes before the committee.

Mr. BARTLETT. Mr. Chairman, I thank the chairman of the committee for those words.

In the 20 seconds that I have remaining, let me say that I will be submitting, along with two other Members of the House, an amendment this afternoon in the hope of winning over the chairman of my committee and in the hope of addressing this critical shortage that we face today in the classrooms.

Mr. FUQUA. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from California (Mr. MINETA), a member of the committee.

Mr. MINETA. Mr. Chairman, I rise in support of H.R. 1310, the Emergency Mathematics and Science Education Act. This bill addresses one of our country's most pressing problems—a serious shortage of math and science faculty and curriculum in our Nation's schools and colleges.

Improvement in the quality of our life and assurance of adequate security has become increasingly dependent on the development of our electronics and communications industries. Yet our educational system is not producing the math and science graduates and teachers necessary to the continued advancement of these industries.

In California, alone, there is a severe shortage of math and science teachers. It has been estimated that the State will need about 2,000 math and science teachers in the 1983-84 school year. Yet only 250 instructors are currently available to fill these positions.

I urge you to vote yes on this legislation. H.R. 1310 will help to solve the current teacher shortage and will send a signal of congressional concern to the industries and educational institutions whose full participation in our efforts is vital to a successful solution to this problem.

I also hope that we can learn from this experience. We cannot neglect the education or our citizens. A strong educational system is vital to the very existence of our democractic system. This bill provides grants and incentives for math and science students. But we must provide adequate funding and incentives in all areas of education. After all, Johnny can't study math and science, if Johnny can't read.

Mr. WINN. Mr. Chairman, I yield 3 minutes to the gentleman from Washington (Mr. CHANDLER), a member of the committee.

Mr. CHANDLER. Mr. Chairman, I would like to commend the chairmen and members of the Committees on Science and Technology and Education and Labor for the work they have done on H.R. 1310, the Emergency Mathematics and Science Education Act. I join my colleagues in support of the concepts and intended goals of H.R. 1310. This legislation will not solve all of our problems, but it is an important effort by the Congress to provide leadership and to put a national focus on the need for qualified teachers. Until we as a nation recognize the importance of teachers in our children's lives, and pay them commensurately, the problems with employing and retaining teachers who can inspire students to learn will continue. The pay issue must, of course, be addressed at the State and local level, but I hope that passage of this legislation today will serve to emphasize how serious we think the problems are.

During the past decade the United States has experienced a serious decline in the quality of education in mathematics and science. Most alarming to me was an article in the March 1982 issue of Education Week indicating that since 1972 there has been a 77-percent decline in the number of secondary-level mathematics teachers prepared in 600 teacher-training programs nationwide. Among newly employed science and mathematics teachers, 50.2 percent were judged by principals to be unqualified to teach in those fields but had been employed on an emergency basis because school officials could not find qualified teachers.

This shortage of mathematics and science teachers hampers the ability of the schools to provide the quality curriculum and instruction so necessary to academic achievement. During an age of technological advances, it is incumbent upon us to provide our students with the necessary skills to compete in today's society. I think this legislation we are considering here today is an important first step which could well determine this country's leadership role as we advance into the 21st century. I urge my colleagues to support H.R. 1310 because I feel that in order to achieve academic excellence tomorrow, we must make a commitment to education today.

□ 1445

Mr. PERKINS. Mr. Chairman, we have no further requests for time, and I yield back the balance of my time.

Mr. GOODLING. Mr. Chairman, I yield 3 minutes to the distinguished gentleman from Pennsylvania (Mr. RITTER).

Mr. RITTER. Mr. Chairman, we do indeed face a crisis in science and math education. And I do believe that H.R. 1310 makes a good first-step effort.

Speaking as a former scientist, engineering professor, former member of the Science and Technology Committee, someone who has been deeply concerned in his own district with this question of better math and science education, I see H.R. 1310 as a major effort to increase the flow of science and math teachers in the pipeline; that is, to educate, to train, and to make available, I think H.R. 1310 goes a long way. It makes a yeoman effort. But the problem is going to occur at the other end of the pipeline. Once the teachers are prepared, will the opportunity be there in a way that people can provide for their families in somewhat similar fashion than they can do were they to work in the private sector?

I submit that that question is not yet addressed. In reponse to a previous statement, we are not in a postindustrial age; we are in a new industrial age. We will continue to build cars, we will continue to make steel, we will continue to produce chemicals. This country is not to be turned into one large Silicon Valley where everybody is making Ataris. Incidentally, Atari just shipped 1,700 jobs to Taiwan and Hong Kong. No; it is the infusion throughout America of new technologies. And the prime sponsors are going to be those able to teach in these areas.

I submit that opportunities, once they are through the pipeline, once H.R. 1310 and the system has worked its will, that opportunity will not be there if the market forces for talent are being repressed. The teacher recruitment and retention problem is largely a matter of economics. Here are some interesting aspects of the problem.

In a recent study by James Guthrie, chairman of the School of Education at University of California the author noted that the dramatic shortage of mathematics and science teachers may doom the United States to a "second rate" future in high technology. The author noted that private industry offers more lucrative pay to people qualified to teach math and science. For example in the San Francisco Bay area, starting teachers earn $12,680 while private industry likely would pay them $20,000, the report said.

The report suggested five tactics for fighting the high school brain drain in technical fields. One of the five recommendations was to allow schools to offer higher pay for these higher demand fields.

In Houston teachers with critical skills, such as science and math teachers will be paid bonuses of $2,000 a year. If they agree to teach in the poorer neighborhoods they receive an additional $2,000. And if they teach in a school where test scores rise above the anticipated norm, they get an additional $1,300.

This has led to an extremely low number of vacancies in these areas in the city of Houston. Only four vacancies in math and science.

Many teachers are drifting away toward industry at this point and according to Henry Tunis, research director of the National Council of Teachers of Mathematics it will get worse as economic recovery progresses. At that point he notes potential science and math teachers will find it easier and more rewarding to go into industry.

Herman L. Carter, personnel supervisor for the Richmond, Va. schools noted that he received over 300 applicants for teaching positions after offering a $1,500 bonus. He noted:

> It used to be in some cases that you'd hire the only (science) applicant who applied. Now for the first time we have the opportunity to pick from them.

In Oklahoma City the school system's personnel chief is offering math and science teachers $500 plus an additional $100 for each credit hour they teach. And the result has been an improvement in the situation.

And I know this is a touchy political situation. Every school administrator, in fact, many teachers whom I spoke with back in my district, recognize it as a touchy situation. But they all recognize that a physics teacher or a mathematics teacher does command a different rate of return and something has to be done.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. BROWN).

Mr. BROWN of California. Mr. Chairman, I yield myself 2 minutes.

Mr. Chairman, I rise in support of H.R. 1310, as amended, and reported by the two committees involved, and I commend the leadership for placing such a high priority on addressing the emergency in science and math education. Chairman FUQUA of the Science and Technology Committee and Chairman PERKINS of the Education and Labor Committee have done an admirable job of bringing together the efforts and interests of their two committees in this one bill.

A number of other Members from both sides of the aisle have also been involved in fashioning this important piece of legislation. The result is a well-balanced bill.

Mr. Chairman, I am not going to detail the merits of this bill nor the urgency of the problem which has resulted in its being moved in an expedited fashion to the floor. I would rather comment very briefly on the fact that the effort to bring it to the

floor in a cooperative way exemplifies the need that exists in this country for a cooperative approach for meeting this very important problem.

The Federal Government cannot solve this problem, nor can the State government or the local school districts. We can each play our part in solving that problem and our part at the Federal level may well be that of merely indicating priorities or providing leadership, of getting out of the way of some of the initiatives that need to be done, and I think that this piece of legislation is an illustration of our willingness to move in that direction.

Amongst the many groups that need to be involved in solving this problem, of course, are the professional mathematicians and the professional scientists who are the ones who create the knowledge base with which we are so concerned. And I note that perhaps through inadvertence that no specific reference is made to these groups in the bill, and I may have a perfecting amendment to accomplish that.

I would like to comment on two general features of the bill that I think are fundamental elements of any solution to the science education problem.

First, while I recognize that we must confront the problem at each level of education, I strongly believe that we should focus a significant portion of our efforts on teacher training at the elementary and secondary school level. Our children are our future, and we cannot afford to squander that valuable human resource through inadequate preparation in those crucial early school years. The most immediate need at the precollege level, as you have heard again and again, is for more properly trained teachers. A recent study in my own State of California estimated that only 10 to 15 percent of the 3,000 new math and science teachers needed statewide each year are now undergoing training. The approach used in this bill to meet the teacher shortage is, I believe, a good one.

Second, it is important that we bring all segments of our society into the solution of this problem. To paraphrase Georges Clemenceau, "Science education is too important to be left to the educators." Private industry, the military, and State and local governments all have an interest in educating a scientifically literate public and in building a technically trained work force. The provision in title II of this bill that requires the matching of funds will insure that these other sectors are brought in as part of the solution. In these times of budget constraints, I hardly need to point out that the matching of funds will also give greater leverage to our limited Federal funds.

Having made those two general comments on the bill, I would like to highlight three of the priorities in title II that I think are especially important.

In section 205, one of the priorities for use of the engineering and science personnel fund is for the development of instructional instrumentation and systems, with special emphasis on computer accessiblity. As we heard in testimony before the Science and Technology Committee 2 weeks ago, our colleges and universities are failing to graduate enough people with the capability to maintain our world lead in computer technology. A recent Wall Street Journal article that I am inserting today as an extension of remarks further underscores this point. Not only is there a great need for training computer experts, but we need also to insure that all college graduates are technically literate. By technically literate, I mean being able to use the new information technologies to obtain information and make informed decisions. A recent report by the Office of Technology Assessment on "Informational Technology and Its Impact on American Education" describes some of the profound changes that we can expect in the coming years. We all realize that the $15 million provided in section 205 for moving our colleges and universities into the so-called information age is not enough money to solve the problem. With the use of matching funds, however, I think the Federal Government can be an important part of the solution. Our action will provide a signal to the country that we intend to maintain our lead in the development and use of information technologies.

Another one of the priorities for use of the personnel fund is for grants to 2-year and community colleges. I thank Mr. WALGREN, chairman of the Subcommittee on Science, Research and Technology, for his active leadership in this area. The community colleges have emerged as the largest arm of American higher education, and I am pleased that their importance is recognized in H.R. 1310. Community colleges are probably the largest source of advanced skill training, outside industry. While our children will be the work force of the future, our adults will provide the transition to the technological society. The education and training needs of our adult population are critical. These are the people jamming unemployment offices and being left behind as our economy shifts its course. It is a matter of the highest national priority to help these people find a place in a society which demands new skills. Community colleges will provide this valuable training and retraining.

A final priority that I see to be very important is to increase the public understanding of science and mathematics. It is my conviction that, in order to promote and encourage technical, engineering, and scientific personnel development in the private sector and in higher education, it will be necessary to communicate these needs and goals widely. Not only do those in these target areas need to know them, but the public also must know them—and help to support them. Otherwise, experience has shown that this sort of effort will again cease just as soon as Federal funds stop. Public television programs such as "Nova" and "3-2-1 Contact" reach million of households and represent a valuable contribution to science education in the United States. These programs have received support in the past from the National Science Foundation, and I hope that these public understanding activities will resume and continue in the future.

With these priorities in how the funds are allocated, I think we have a very strong bill. My only regret about this legislation is that we have not acted before now. As a member of the Committee on Science and Technology during the last decade, I recall how the Congress has fought every year to strengthen science education programs while those programs were given lower and lower budget priority. Those battles have been particularly tough in the last 2 years as the current administration sought to eliminate all funding for science education. Now I feel those many budget fights are paying off. The tide has finally turned. President Reagan has now joined us in asking for increased funding for science education. We gladly welcome his support.

Mr. Chairman, our Nation must make a commitment to educate and train our citizens for living and prospering in a technological economy and society. The work of educating our citizens for the future is one of the most important tasks facing our country. The Federl Government has an important leadership role to play in this process, especially in bringing together and encouraging linkages between all segments of our society which should be concerned with this problem. Our work on science education will not end when we finish action on this bill. In many ways our work is just beginning. As an important first step in meeting the challenge, I strongly urge my colleagues to support H.R. 1310.

Mr. WINN. Mr. Chairman, I have no further requests for time, and I yield back the balance of my time.

Mr. BROWN of California. Mr. Chairman, I yield such time as she may consume to the gentlewoman from Tennessee (Mrs. BOUQUARD).

Mrs. BOUQUARD. Mr. Chairman, I rise in support of H.R. 1310, the Emergency Science and Mathematics Education Act. This important measure will help us to correct the problem of decline in the quantity, and in many

cases, the quality of technical manpower.

In the not so distant past, the United States was the unquestioned technological leader of the world. Indeed, we have been in this position for so long that is difficult for the great majority of the American public to realize how rapidly this lead is disappearing or, in many cases, has been already lost as in the case of consumer electronics—which we well know from watching our Japanese TV's and listening to our Japanese radios.

How have we found ourselves in this predicament? Certainly one major factor in this decline has been our failure to make adequate investments in research and development—R&D. But I also believe that our national investment in R&D is but one of two major contributions to our current difficulties; the other major contributor is our failure to provide the technical training needed by our work force if we are to compete effectively in the international marketplace. At the precollege level, in particular, we have fallen far behind our international competitors both in quality and in quantity.

The past decade has also witnessed a dramatic decline in the quality and quantity of secondary schoolteachers of science and mathematics.

Finally, our system is failing to provide sufficient incentives for our young people to go into graduate study in science and engineering. Low stipends for graduate fellowships, poor salaries for university professors, and obsolete laboratory equipment are turning American science and engineering graduates to private industry which offers high pay and state-of-the-art equipment with which to work.

Clearly, this loss of resources and wasting of talent for which the Nation has urgent need must not be tolerated, and I am convinced that if we are to get a handle on the problem we must begin by making major improvements at the secondary levels—improvements which I believe the Federal Government can expedite. In fact, it was my concern about this vital issue that led me to support this bill. The programs supported by these additional funds can play a pivotal role in reversing the grim situation in which we find ourselves today.

These programs will, of course, take time to show results. But the time to begin is now and we must remain resolute. The failure will have grave consequences for our economic well-being and for our national security in the coming decades.

Mr. GOODLING. Mr. Chairman, I yield myself 1 minute.

Mr. Chairman, I would just like to reemphasize that the difference of the approach we are using today from anything I can think of that was done in the past is that we are trying to improve the math and science literacy among the general population rather than merely enhance the expertise of the elite, and we are doing this through institutes and in-service training programs; we are doing this by upgrading existing teachers, recertifying teachers, and bringing those into the field who have expertise in math and science but are not certified.

Mr. Chairman, I yield back the balance of my time.

Mr. BROWN of California. Mr. Chairman, I yield 5 minutes to the gentleman from Missouri (Mr. SKELTON).

Mr. SKELTON. Mr. Chairman, I appreciate the gentleman from California yielding me this time to speak on a very important issue.

In the 1950's, the Soviet Union sent aloft a satellite which alarmed the world and alarmed us. This satellite, known as Sputnik, caused this Congress in 1958 to pass legislation known as the National Defense Education Act of 1958. That helped us bridge the so-called Sputnik gap and to get ourselves back on track in the area of science engineering and technology, and that we did. And we have done well in recent years.

But we have also learned that, as a result of our not paying as strict attention to these areas in the last couple of years, we have slipped.

Mr. Chairman, I asked that the Library of Congress prepare, a year ago, a study as to America's position in science and engineering. The Library of Congress responded with a two-part study, and in that study they pointed out that the United States has fallen to third in the world in producing scientists and engineers. We are third behind the Soviet Union, which is first, and the country of Japan, which is second.

This is alarming. This bill is a first step in correcting that wrong.

Mr. Chairman, as a member of the Armed Services Committee and also one who is deeply interested in our exports of American products and our trade here as well as abroad, this bill will help us right the wrong that we have at the present time. There is a teacher shortage. There is a lack of general understanding of the need for the importance of science and technology, and that is what this bill addresses.

I hope that we will not only begin with this bill but that we can continue in the future to work and do our very best to make sure that the technology gap of the 1980's will narrow and that we will again be in the lead.

I wish at this time to engage the gentleman from Florida (Mr. FUQUA) in a colloquy dealing with this bill.

As the gentleman knows, I ordered the two-part Library of Congress study on America's role and the lack of our having science and engineering and the need for it, and thereafter, as the gentleman will recall, I introduced legislation to establish a commission that would assist and to assess our problems and our goals and needs in the area of science, engineering, and technology.

Now, the gentleman's bill, H.R. 1310, does not include the commission that I have recommended. However, the gentleman does have, as part of his bill, legislation that would establish a coordination between this and the White House.

I would appreciate the gentleman's comments on that, please.

Mr. FUQUA. Well, we have the Department of Education involved in some of the programs, the National Science Foundation, and others, and also the science and technology policy within the White House, which is its normal function and responsibility, to make sure that there is coordination between all of the functions that are involved in education, whether it be just these two agencies or maybe even the Department of Defense in the programs that they may feel that are necessary. And that is the function as the Science Adviser to the President. And the Office has indicated, Science and Technology Policy, that they recommend and review the condition of these activities, to make sure that they are with the overall purposes that not only Congress intended but also the national purposes that we pursue.

□ 1500

Mr. SKELTON. What assurances, then, do we have that the Office of Science and Technology Policy which answers to the White House would be committed to fulfilling the objectives of this Congress?

Mr. FUQUA. We feel as though they would. We would hope that the charge that is given to the Department of Education as well as the National Science Foundation would be followed.

We hope that the Department of Education and the National Science Foundation are experienced agencies in operating these programs and we think within the scope of their responsibilities that they can carry that out.

However, we want to insure that there is coordination and we have designated that in the bill where the Office of Science and Technology Policy within the White House to review and work with them and coordinate between these two agencies to make sure that they are carrying it out, and we have every reason to believe they will.

We have had very cooperative relationships with the Office of Science and Technology Policy and its Director, Dr. Keyworth, and I have every reason to believe that will continue.

Mr. SKELTON. I appreciate that.

Mr. NELSON. Mr. Chairman, will the gentleman yield?

Mr. SKELTON. I yield to the gentleman from Florida.

Mr. NELSON. Mr. Chairman, I am pleased to have this opportunity to speak in strong support of H.R. 1310. I am a cosponsor of this legislation which is a combination of two bills—the Emergency Mathematics and Science Education Act and the National Engineering and Science Personnel Act. I was originally a cosponsor of each of these vital bills also. Today's debate is an important step in securing a speedy enactment of this important legislation.

The global economy of the 1980's will be one of high technology in homes, schools, businesses, and government services. Today, the United States is a world technological leader primarily as the result of our national resource of skilled scientists, technologists, engineers, and technicians. This leadership is essential for our economic and national security.

U.S. technological supremacy has eroded as other industrial countries have developed and implemented programs for expanding their technological capability. Our technological edge is threatened by a shortage of skilled engineers and scientists and, even more seriously, by the lack of general scientific and mathematical literacy necessary for the majority of citizens who provide the technical and consumer support of our economy. Technological literacy is also becoming increasingly important for full participation in our society and for individual personal development.

Our future national economic and social well-being is determined partly by our schools and their ability to prepare youth for effective participation in a technological information society. There is increasing evidence that the mathematical and scientific literacy of our youth and adults is being neglected.

If we are to respond effectively it is essential that we:

Establish the improvement of education and mathematical and scientific literacy as a priority for action;

Increase and improve the pool of qualified teachers of mathematics and science who can adequately prepare our youth for the emerging technological society;

Restructure and revise the mathematics and science curriculum to prepare the nonspecialist as well as the specialist and to modify the sequencing of curriculum to match the stages of intellectual development and ability;

Increase the amount of time students spend on academic studies and increase the availability of scientific equipment and facilities; and

Develop comprehensive programs that can further general computer literacy, including computer applications that will lead to increased mathematical and scientific literacy.

This legislation is an important first step in addressing our current crisis. Our leadership in technology for the world is at stake. We cannot afford to wait any longer.

Mr. SKELTON. Mr. Chairman, I certainly hope this is a major step in doing away with any technology gap that we have in our future.

Mr. PORTER. Mr. Chairman, I rise in support of H.R. 1310, the Emergency Mathematics and Science Education Act of 1983.

Among other provisions, the bill provides for the in-service training of teachers and encourages modernizing and expanding courses of instruction in mathematics and science. These are worthwhile objectives that need further effort and involvement by all segments of the Nation, including the business community, the Nation's universities and above all the members of the teaching profession and their allies in the educational publishing industry.

It has been truly said that this is the age of the computer and the decade when the elementary and secondary school children of the United States will prepare themselves to use the scientific and mathematical wonders of the 21st century. These students face greater intellectual challenges than any other generation of Americans. This effort by the Congress to further the teaching of mathematics and science and meet that intellectual challenge has my enthusiastic endorsement.

Beyond the better preparation of teachers in these crucial areas, our Nation needs to bring forward better programs to enhance the ability of students to learn. One of the most innovative plans to identify and bring to the attention of teachers everywhere effective programs in many areas of learning is the National Diffusion Network, a modest $9.7 million part of the discretionary funds of the Secretary of Education. I believe very strongly that together with the efforts contained in H.R. 1310 to encourage better qualified and a larger number of math and science teachers, our Nation needs the ability to mobilize our best efforts in the actual teaching of these subjects. For this reason I intend to work for increased funding of the National Diffusion Network, together with appropriate language in the report accompanying the appropriation for the Department of Education directing the Secretary to increase his efforts to discover and promulgate the most innovative and effective teaching programs in mathematics and science to our Nation's elementary and secondary teachers.

This dual effort—both in obtaining the best possible teaching personnel and the best possible teaching models or programs—in mathematics and science for our Nation's schools will help our children meet the challenge of the next century in the exemplary fashion that we have always met the future and made it ours.

Mr. GREEN. Mr. Chairman, I rise in support of H.R. 1699, a bill to provide funds for science, math, and technical training. Having sponsored a hearing in my district last year on our Nation's scientific training base, and as the ranking minority member of the Appropriations Subcommittee for the National Science Foundation, I am familiar with the severity of the problems the United States faces in this area, and support the manner in which H.R. 1699 deals with them.

Science bears on almost every aspect of our lives: On our ability to heal the sick, to dispose safely of hazardous waste, to compete internationally, to innovate technologically, and so on. Recent years have seen remarkable scientific advances, and in the coming decades the pace of technological change will probably quicken. Technological skills are in short supply and at a premium due to structural changes in our economy. Yet because of the dwindling supply of science and math teachers and engineers, the United States may face a severe shortage of the technologically trained personnel necessary to sustain a United States and world economy icnreasingly dependent on scientific know-how. While few would deny the United States is today preeminent in science, few, too, would deny that the United States stands a good chance of seeing this preeminence evaporate unless steps are taken to improve science and mathematics education in the United States.

At my February 1982 hearings on science and math education I heard from a variety of educators, Government representatives, scientists, and industry representatives about science and math education. The witnesses at the hearing painted a disturbing picture of our country's inability to train scientists and engineers and to educate nonspecialists in the scientific and quantitative skills they will need to participate fully in our increasingly technical society. At my hearing, I learned of industry salaries in engineering that are drying up the supply of teachers for future generations of engineers, causing shortages and bottlenecks in a profession that is crucial to economic growth. I learned of the severe shortages of precollege math and science teachers that prevent many children from getting the preparation they need and preclude them from pursuing scientific careers. This is a terrible waste of intellectual resources. Furthermore, it has caused a mismatch between the needs of the

work force and the ability of our educational system to fulfill them that must be corrected.

The bill deals with these problems in various ways. Title I of the bill is to be administered by the Department of Education, and is intended primarily to improve math and science education at the elementary through postsecondary levels. Part A of title I authorizes $250 million for fiscal year 1984 to improve training for current teachers in elementary and secondary schools. Part B of title I authorizes $50 million for postsecondary education programs. It seeks to increase the supply of science and math teachers, and would in fiscal year 1984 provide 5,000, and in fiscal year 1985, 10,000, scholarships for students committed to teaching science or math. Part B also funds summer institutes and workshops for teachers, curricula improvement, education research, and the minority institutions science improvement program.

Title II of the bill deals with engineering and technical personnel, and will be administered by the National Science Foundation. The $100 million authorized by this title will enable postsecondary institutions to increase the pool of technically trained manpower in the United States, especially in engineering. Grants made under title II must be matched by funds from private or other public sector sources. Title II outlines several broad priorities: To improve technician training, to provide greater access to computers, to enhance precollege science education, to encourage public participation in and exposure to science, and to encourage women and minorities participation in science. Title II also gives the White House Office of Science and Technology Policy primary responsibility for coordinating research and development and science personnel.

As I have said, I support the bill and will vote for it. I am concerned, however, that of the $400 million authorized in the bill only $50 million is devoted to increasing the supply of precollege science and math teachers. I feel this issue is the most serious in the long term and am concerned only one-eighth of the funds authorized in this bill are expressly devoted to solving it.

Section 205 of title II of the bill lists "recruitment and retention of engineering faculty" as the first of the seven priorities to be addressed by the NSF in administering the title. I believe equal importance should be attached to recruitment and retention of computer sciences faculty and hope this will be clarified during consideration of the bill.

Title II's use of matching funds from private and other sources is a very constructive approach. As industry is part of the problem in science and technical education, so should it participate in the solution. Also, the private sector will be a good ally in averting the crisis in math and science education because it has both a strong vested interest in seeing the problem solved and the resources to provide effective help.

Mr. Chairman, the problems of science and math education and technical personnel are very serious and I am pleased the 98th Congress has moved so expeditiously to ease them. Enacting this bill will not solve our technological personnel problems, and I certainly intend to continue my efforts in this area, but the bill is a good first step and I support it.

● Mr. MARKEY. Mr. Chairman, I join today with many of my colleagues in supporting H.R. 1310, the Emergency Math and Science Act. It is not necessary to impress upon this body the critical need to bolster math, science, and other technology-related education because it is a situtation with which we are very familiar.

This country has been most fortunate in terms of the quality of teachers employed in our schools. But the shortage of math and science teachers is well known, as is the need to train our future generations to compete with new skills in a changing world. Testimony has shown that most States are short of physics, math, and chemistry teachers. At the same time, student achievement on college entrance exams has declined in these areas, while fewer students prepare for careers in science or mathematics.

The Emergency Mathematics and Science Education Act could pave the way toward addressing this most serious problem. We are all aware of the present economic situation, but this is an instance where money spent today will come back to us in the future. There is no wiser investment than the education of our youth. The technological community in this country would be invigorated by the entry of more scientists and mathematicians into a number of fields, including teaching. We should begin by directing our efforts, through this bill, at the schools. Building up the Nation's standing as a technological leader will be a long process, but one which can and must be undertaken today with passage of this bill.●

● Mr. ROE. Mr. Chairman, I rise today to express my strong support for H.R. 1310, the Emergency Mathematics and Science Education Act of 1983, a bill whose passage I consider vital to the very future of our Nation.

For decades this country has been the world leader in the field of technological innovation. Indeed, we were the first Nation to put a man on the Moon. For the most part, our scientists and engineers have continued to startle the world with new developments in the fields of science and mathematics.

But recently our technological edge has been dulled and indeed threatened by a radically increasing shortage in this Nation of skilled scientists, technologists, engineers, and technicians.

Recent Federal education budget cuts by our current administration has greatly exacerbated this dangerous situation by reducing both funding and programs to train our young people in these essential fields.

The situation has deteriorated to the point where last year, in my own State of New Jersey, all 21 counties reported an inability to find fully qualified teachers in the fields of mathematics and science.

Mr. Chairman, H.R. 1310 would do much to alleviate this situation at minimal cost. It appropriates adequate funding to improve math and science instruction at the elementary and secondary levels and to increase the supply and qualifications of teachers at those levels.

It also establishes a unique 2-year scholarship program, to be called the national teaching scholarships, for undergraduate and graduate students and 1-year scholarships for current teachers. Each person receiving a scholarship would be required to teach 2 years for every year of assistance he or she received.

Mr. Chairman, there has been much concern expressed by the White House over the need to expand our military defense system. Yet, there is little effort coming from this administration to train our young people in the scientific skills that will enable them to develop the new weapons and defense systems they are urgently calling for.

If we are to remain competitive in the world economy, we must have the technological expertise to deal with the economic threat coming from Japan and other nations who are stealing our thunder in this area. A giant step in that direction would be the passage of H.R. 1310 and I urge my colleagues to overwhelmingly support it today.●

● Mr. DYMALLY. Mr. Chairman, when the Science and Technology Committee marked up the Emergency Science and Math Education Act, H.R. 1310, I offered an amendment which was agreed to unanimously by my fellow committee members. The amendment removed the qualifier "certified" from before the word "teacher" in the summer institutes section of the bill. There are some who have expressed the fear that this amendment would open the summer institutes to people who are unqualified. That is not the intent of the amendment. It is my intent that only those who possessed a teacher certification or those who have professional training in the area they hope to teach should have access to the summer institutes and workshops.

Those who are unqualified either through lack of a credential or through lack of professional training in the area they would teach, would still be excluded from participation in the summer institutes funded through H.R. 1310. The amendment was intended to allow State and local authorities to make use of a teaching talent pool that has been largely neglected.

This is the talent pool represented by professional scientists and mathematicians. If the word "certified" had remained in the bill, such experts would have been barred from the program. Far from intending to open the summer institutes to those who are unqualified in science or mathematics, its intent is to open the programs to those who are most qualified: Scientists and mathematicians.●

● Mr. WISE. Mr. Chairman, I strongly oppose any proposal advocating a differential in pay for teachers in math and science. This band-aid approach to the problem of attracting and retaining teachers in the areas of math and science is very shortsighted. Pay differentials—sometimes referred to as merit pay—make a strong statement to all teachers: Some subject areas are more important than others. After all, without reading and writing skills, no child can learn science or math. This means that education at the elementary school level must be taken into account in any initiative proposing to improve math and science training. Without a basic framework on which to build from the earliest years, students will not be able to achieve their potential in any subject area.

It is clear, in addition, that recruiting well prepared teachers of English or other languages, art, or music is as vital as hiring good math and science teachers. The pursuit of all-around quality must stay as a guiding education policy.

Added pay schemes fail to take into account two fundamental considerations: Why people enter teaching and why they remain in it. Virtually every available study shows that people enter the field primarily because they want to work with young people. These same studies reveal that many leave because of inadequate time to teach and because of other factors that are directly related to salary. Obviously, salaries for all teachers must be raised, but there are other ways of making teaching more attractive than simply paying more to teachers who are—perhaps only temporarily—in short supply. Class size must be made manageable, nonprofessional duties must be reduced, and teachers must be given time to pursue courses and other professional development activities to help them improve their teaching and their sense of self-worth. These changes cost money, but money that will aid teachers—and students—not only a select few.●

● Mr. ROYBAL. Mr. Chairman, I welcome this opportunity to speak on behalf of H.R. 1310.

For some time now, I have been growing increasingly concerned about the state of our educational system. We simply have not been able to keep pace with the rapidly changing demands of our high-technology society. I am gratified that so many of my colleagues appreciate the urgency of this matter, for the situation is becoming critical. Warning signs are everywhere:

First, of the 25 instructional hours available in a school week, elementary schoolchildren get an average of 1 hour of science instruction and less than 4 of arithmetic.

Second, in junior high school, most students are not exposed to algebra until ninth grade, and then only two-thirds of ninth graders elect to study it. In addition, there is little opportunity for junior high students to explore a specific science or engineering topic.

Third, only 34 percent of our 3 million annual high school graduates have completed 3 years of math. Only 31 percent of our high schools even bother to include calculus in their curriculum. Science fares even worse—only a third of all seniors have taken a chemistry course, and only 10 percent have taken physics.

Our schools do not have the proper equipment for instruction in many of the sciences, and are facing a critical shortage of qualified science and math teachers. During the 1970's, we experienced a 77-percent decline in the number of secondary school mathematics teachers being trained, and a 65-percent decline in science teachers in training. Of those who are trained, many are leaving the low pay and high aggravation level of teaching for jobs in business and industry. In light of these figures, it is not surprising that as many as 50 percent of those currently teaching science and math were found to be unqualified to do so.

Those students who do decide to pursue a course of study in science or mathematics in college are often plagued by the same problems they faced in high school—lack of equipment, underqualified teachers, a limited selection of classes, and a poor prepatory background in those fields. Of the group that manages to overcome these obstacles, minorities and women are seriously underrepresented.

This is in sharp contrast to the educational systems of such countries as the Soviet Union and Japan, where a high priority is placed on developing skills in science and math. Those countries even have a national education policy emphasizing the importance of those disciplines to economic and cultural progress. They will be prepared for the future. Where we once ruled the roost in virtually all high-technology areas, other nations are rapidly catching up and in some cases, such as the Japanese in microelectronics, have displaced us.

If we continue as we have been, where will we be in a few years from now? How will we fill the estimated annual demand for over 50,000 new electronic, computer, mechanical, and science technicians through the end of the decade? Where will our major new advances in those fields come from? If we do not want to get them second hand, we had better act now.

It is past time to reemphasize education as a national, not just a local concern, and one that is just as important to the defense of our Nation as the latest developments in missiles. What good are these costly and complicated weapons systems if we have no one to conceive of them, to build, operate, and maintain them, to improve on them? In my opinion, fading technological capabilities pose as serious a security risk to this country as do the Soviet weapons systems. We need cooperation among State, local, and Federal Governments, school boards, colleges, and universities, and private industry if we are going to effectively address this problem, and we need it now.

H.R. 1310 emphasizes those critical areas I have just discussed—teacher training, curriculum revitalization, and equipment availability—and it will be of benefit to precollege and postsecondary students alike. It also recognizes the important place foreign languages should occupy in our schools' curriculum—our students must be prepared to deal with the ever-expanding world marketplace. Moreover, the development of a national policy in these areas is encouraged.

For the sake of our future, we must act today. I urge you to join with me in voting for passage of this measure.●

● Mr. BOUCHER. Mr. Chairman, I rise in support of H.R. 1310 the Emergency Mathematics and Science Education Act. As a member of both the House Committee on Education and Labor and the Committee on Science and Technology, I have been deeply involved in the development of this legislation which is, in my view, as important to our Nation's economic development and national security as was the National Defense Education Act of 1958 which followed the Soviet launch of the Sputnik satellite.

The statistics which dramatize our national neglect of science and math education are well known and will be repeated here frequently during the debate on this measure. Less than 30 percent of the Nation's high schools require more than 1 year of science and math instruction. There is currently a 9-percent shortage of engineering faculty despite the growing

demand from business and industry for engineers. At the elementary and secondary level, and at the postsecondary level, science and math classrooms are overcrowded and equipment is obsolete. My own State of Virginia faces a serious shortage of elementary and secondary schoolteachers certified in chemistry, physics, the Earth sciences, and mathematics. Other nations are outdistancing the United States in their course requirements for science, math, and engineering.

The statistics are indeed telling. But, as is so ofter the case, it is not until we take the time to look within our home districts that we understand how pervasive the problem really is.

Last month, I spent several days traveling throughout my district in southwest Virginia talking with constituents, business leaders, educators, and students. Whether I was on the campus of Virginia Tech in Blacksburg, one of the South's leading research and development institutions, or in the coalfields of Wise County, the impact of technology and the need for basic science and math training for students was everywhere apparent.

At Virginia Tech I visited with professors and students involved in agricultural research to improve farm productivity. Their work will have applications on the family farm as well as on the large agricultural enterprises.

At United Coal Co., in Bristol, company officials showed me the product of a new coal technology that converts solid coal into a combustible liquid form. New coal technologies will make America's most abundant energy resource more economical and will help put unemployed miners back to work.

In Abingdon, I visited the computer career training center at Virginia Highlands Community College, and in Montgomery County, area business leaders described their difficulty in finding employees with basic technological training.

The message of the visit was clear: The need for expanded science and math education is urgent. It is a need as important in our rural areas as in developed, metropolitan areas. The longer we delay in responding to the need, the further our community will fall behind in meeting the demands of the modern marketplace.

The assistance to local governments contemplated in H.R. 1699, the program of national teaching scholarships, and other provisions to revitalize the teaching of science and math represent an important first step in this effort to once again place America on the frontier of science and technology. H.R. 1310 substantially addresses this need, and I urge its adoption by the House.●

● Mr. WIRTH. Mr. Chairman, our passage of H.R. 1310 today is the first action we can take on the floor of the 98th Congress to make some much needed investments in our country's future—investments which will pay for themselves many times over in increased productivity and competitiveness in our rapidly changing economy.

The bill is the result of a carefully crafted consensus between Chairman PERKINS of the Education and Labor Committee and Chairman FUQUA of the Science and Technology Committee. As such, it addresses a range of critical problems facing our Nation's elementary, secondary, and postsecondary institutions, and contains sound, carefully drawn solutions.

First, it contains a range of remedies to our serious erosion of quality in math and science education. Just 2 weeks ago, the Denver-based Educational Commission of the States, in its new national assessment of education, pointed out that high achieving students do not seem to be realizing their potential, particularly in math and science. It is no wonder. Our schools have a severe shortage of teachers trained to teach these subjects. For example, studies show that 43 States have a shortage of math teachers at the secondary school level. In my own State of Colorado, only 80 percent of the math slots are being filled by qualified math instructors, and this is expected to decline to 50 percent by the year 2000. Similar shortages have been reported in physics and chemistry.

At the same time, our economy which is increasingly reliant on technology and information, needs more than ever a work force which can manipulate numbers and machines. The jobs of the future will go to those who have a solid math and science background, and we must take steps to insure, as H.R. 1310 does, that all students will have access to these jobs. Otherwise we would be reneging on our longstanding commitment to provide equal educational opportunity for all students. Serious needs in our math and science education programs are national in scope, and require our attention.

Second, H.R. 1310 has a strong commitment to some investments in research and higher education which are critical to future economic growth. There is an established relation between investments in basic research and our Nation's productivity, both within industries and across the entire economy. A University of Pennsylvania study for example showed that 40 percent of increased productivity over a 20-year period is due to new technology or information.

But now when we are stuck in the midst of a persistent and deep recession and facing longer term challenges to our economic competitiveness in an increasingly international economy, we have neglected our basic research seriously.

Our universities have traditionally been partners with Government and business in the national mission of basic research and development. But Federal investment in universities R&D plants fell—in adjusted 1972 dollars—from more than $211 million in 1966 to less than $16 million today.

The result is that our university laboratories are eroding, and they are starving for new instrumentation. Now when our future international competitiveness depends on the ability to continue to innovate and invent, students are training on equipment twice as old as industry's, often on instruments already obsolete.

Last year, in recognition of these problems and their serious economic consequences, I proposed in the Budget Committee a productivity package of investments. Comprised of a major 5-year strategy to renew and increase Federal investment in university research and development, its goal was to restore universities to their place as full partners in the pursuit of economic growth. A similar goal, and many of the same components, are reflected in H.R. 1310. It includes $50 million directed toward university's instrumentation needs and a multifaceted emphasis on strengthening educational research and development. It further would establish a National Science Foundation engineering and science personnel fund as an important step toward insuring that our country is supplied with the trained manpower that is badly needed in these fields. These are among the most important investments we can make toward reversing alarming declines in productivity growth, and setting the stage for sustained economic growth.

In addition, as chairman of the Subcommittee on Telecommunications, Consumer Protection, and Finance, I want to commend the Education and Labor Committee for recognizing the valuable contribution public television can make to this effort. At this point, Mr. Chairman, I would like to offer for my colleagues a fine article by William Finegold which clearly illustrates the potential for public television in improving science and math education, and insert it in the RECORD at this point.

TV CAN TEACH SCIENCE AND MATH

(By William Finegold)

Our nation's schools are facing a crisis in science and mathematics on the secondary school level caused by the shortage of science and math teachers. This shortage will have a serious impact on our country's future capability in the area of scientific and industrial research and development as well as our national defense.

One major reason given for this shortage of teachers is that college graduates who excel in science and math are recruited for positions in industry that are more remunerative and possibly more challenging.

One practical solution that has not received sufficient consideration is the expanded use of television to teach science and mathematics. The top teachers at the secondary school and college levels could be recruited to develop and teach these courses. They can be broadcast over public TV stations, closed circuit TV or cable, or they can be put on videotape to be used at a school's convenience.

Science and math would seem to be the ideal subjects for the use of electronic instruction. The TV screen and computer offer the special advantages of color and animation as well as dramatic and graphic presentation. We have seen how the younger generation is attracted by television, the computer and the excitement of electronic games. This interest can be built upon and broadened in science and math instruction.

Scientific experiments can be shown on the screen in full color, magnified many times over with the use of the electron microscope. Slow motion and stop action photography will enable the students to study biological, chemical and physical processes in minute detail.

In a very practical way, these television presentations will serve as demonstration lessons for current as well as future science and math teachers. The ideal way to improve the quality of instruction is for superior teachers to demonstrate the finer procedures in the art of teaching.

On the college level, these televised science and mathematics lessons will provide training in methodology as well as content for the students preparing to enter the field of teaching. These college students can, at the same time, be utilized as teachers-in-training or interns on the secondary school level. They will be able to follow up the television presentations with the high school students on a group or individual basis in the classroom or laboratory. It would be feasible to pay them some stipend as part of this work-study program.

The dual value of science education and teacher training through television is cited by Robert Diamond of the University of Miami, who states: "The use of television in science instruction has allowed the schools to increase the amount of individual attention for our exceptional children, and it has permitted an excellent program of teacher education with minimal expense to the district . . . "We are convinced that television, properly used, will bring the most talented instructors and the highest quality of instruction."

TV programs with science content, such as "Cosmos," "Connection," "Nova," "The Ascent of Man" and "The Body in Question," have attracted a large audience. Although they have been intended for the general public, study outlines are available for some of these courses, and some colleges do grant credit for students who watch such courses, do additional readings, and take an examination based on the TV course.

Other general television courses have been adapted for college students, and colleges throughout the country are granting credit for such courses. Despite the fact that these programs were not designed for instructional television, they do indicate its potential as a teaching tool. Last year 55,000 students in more than 500 colleges in 47 states took television courses offering college credit, some in science and mathematics.

The shortage of science and math teachers may provide the opportunity for a breakthrough in the use of instructional TV. If the best scholars, educators and media specialists pool their talents, they will not only fill the science and math teaching gap, but also improve the quality of instruction. They may even help TV fulfill its potential for becoming the exciting tool for learning that some educators foresaw in its infancy.

Mr. Chairman, as chairman of the Democratic Caucus' Task Force on Long-Term Economic Policy, I have spent a great deal of time in the past 2 years consulting with thousands of Americans from all walks of life about what the Federal Government, along with business and labor, can do to get our economy back on track for the rest of this decade and beyond. An answer that came back loud and clear from leaders of finance, universities, labor, high technology firms, and troubled basic industries, as well as many common citizens, was that we need to make adequate investments in our people. Our brainpower is our most valuable national resource. Our long-term economic policy report thus puts major emphasis on investments in human capital. H.R. 1310 is the first piece of legislation before us in this Congress which addresses these very important issues. I am proud to be a cosponsor of this bill, and urge its adoption today.●

● Ms. OAKAR. Mr. Chairman, the legislation we are considering today is crucial to the continued vitality of our educational system. H.R. 1310 channels funds where they are most needed. The problem our country faces in its shortage of qualified mathematics and science educators is a serious one. Our country needs to hold its own in the area of education—our children are a valuable resource that needs to be cultivated. We cannot allow them to have anything but the best—and, therefore, we need to provide the best possible training for our teachers.

The decline we have seen in the number of students participating in mathematics and science programs is largely due to the decline in available, qualified teachers in those fields. Students are not encouraged by the lack of parity between the financial compensation of teachers and private industry personnel with commensurate qualifications.

The funds that the measure authorizes will not only strengthen current mathematics and science teachers but will encourage postsecondary students to pursue careers in these fields as well as in the field of foreign languages.

Another need that will hopefully be alleviated by the passage of this legislation is the critical shortage of skilled technicians and high level scientific personnel. This is a dilemma which threatens to weaken our stature in the international marketplace as well as our industrial base. It is essential that our Nation's commitment to science and technology be strengthened—this legislation would do just that.

Mr. Chairman, it is imperative that we pass the legislation today. We cannot do any better by our children than to invest in their futures by investing in their educations.●

● Mr. STARK. Mr. Chairman, I wholeheartedly support the concept and purpose of this legislation to provide Federal assistance to improve mathematics, science, and foreign language training in our Nation's schools.

We are in the midst of a new type of industrial revolution; one that takes on even greater and more mind-boggling technological aspects than our first such revolution. To deny this country's students the needed technological training to prepare them for the jobs spawned by this revolution is to seriously handicap both the students and, ultimately, this Nation.

When we speak of literacy in this age, we must consider more than just an ability to read and write in our native tongue—we must consider computer literacy, as well. And establishing that literacy, which is so vital to our future, requires the necessary computer hardware.

In the 97th Congress, I introduced legislation to provide tax incentives to all computer companies that donate their wares to our country's schools. The measure passed in the House overwhelmingly, but time ran out in the final days of the lameduck session, and the Senate was unable to act.

I have reintroduced this legislation in the 98th Congress, and during this session we will have the unique opportunity to witness how a similar program works on a smaller scale.

With my bill serving as the impetus, the California Legislature, in the true spirit of federalism, last year approved a measure granting tax incentives to computer manufacturers to encourage equipment donation to the State's school system.

One computer company alone estimated it would be able to donate as many as 10,000 computers to California schools, a figure enthusiastically greeted by the superintendent of schools in my district.

"Everything we hear these days tells us computers are going to become a bigger and bigger part of our lives, somewhat like the changes in our lives the automobile made," Alameda County Superintendent of Schools, Robert Coney, said. Coney added that donations made by computer manufacturers would "provide for the expansion of hands-on training," which he says is extremely important.

Despite its many budgetary problems, California is willing this year to serve as a living laboratory to test the theory that government support for technological training in computers

will ultimately pay off in a better educated, better equipped citizenry.

Therefore, during the coming months, I will be asking California teachers, administrators, students, and parents to describe the impact that the computer equipment donations in California have on their curriculum, their rate of learning, their test results, their attendance and interest in the classroom and the problems they have in effectively utilizing donated equipment, training teachers in their use, and in finding or using good quality software.

As chairman of the Select Revenue Measures Subcommittee, which handled my 1982 bill to encourage a system of national donations, I intend to hold field hearings in California this summer or early fall to document the successes and failures of the California donation program. If, as I suspect and hope, it is a success and does improve classroom learning and enthusiasm, then I believe we can make an irrefutable case for the enactment of national legislation.

Our educational and hi-tech employment problems are national in scope; if the California experiment is useful and helpful to the students of the Golden State, then the same program should be enacted for the whole country.

I know that the teachers and administrators of my State do not need any more forms or questionnaires to fill out—but I hope they will respond to my future inquiries in this matter, since it can lead to a major national program of benefit to the entire country.●

● Mr. AUCOIN. Mr. Chairman, within a matter of days, we here will consider a jobs bill that many of us do not like a great deal. That bill will provide jobs in some few industries but it does not invest enough in the long term future of this Nation and its vital industries.

In the legislation before us, the math and science education bill, I find far more cause for optimism. For the opportunity before us today is to make a carefully targeted, high-yield investment in the Nation's most valuable resource, the brain power of its youth.

I rise as a cosponsor and strong advocate of H.R. 1699, and do so because for me, this is truly a jobs bill that fulfills one of our deepest needs—providing an educated and trained work force that will inherit an industry whose precise nature is really beyond the imagination of most of us in this House today.

As things stand now, this Nation is startlingly unprepared to face the future. Last year in my home State of Oregon, a State where high technology is the wave of today and tomorrow, higher education produced only one new physics/chemistry teacher. One. This, in a State where 18 instructors teaching science at the high school level are not certified for those subjects. And where 28 math teachers lack proper certification.

But it is not just Oregon, Mr. Chairman. There are shortages of math and science teachers in virtually every school district in the United States. In 1981, 43 States reported a shortage of math teachers, and 42 claimed shortages of physics instructors.

It is not too hard to see where that is leading us, in a world where our trading partners are making major national investments to outstrip us in basic research and development of high tech components. The simple fact is, that if we are to harness the incredible growth that high technology industries have to offer, it is essential that we provide that industry a highly skilled work force.

In Oregon, high technology firms tell me that the single most important thing we can do to keep them competitive and producing jobs is to make it possible for our public schools to provide a solid education in math and science. Without that, we face a future in which no trade legislation will be worth anything, no military system will be more than second rate, and no phase of our economy will be anything other than vulnerable to the merest breeze in the international trade winds.

Consider—the rate of knowledge in the electronics industry is doubling every 18 months. That means a huge demand for trained technicians, 50,000 a year until at least the end of the decade according to the Department of Labor. Additionally, forecasters are predicting that the electronics industry will open up, overall, 2 million new jobs during the 1980's.

H.R. 1699 will move to fill this gap by offering recertification programs for elementary and secondary teachers and scholarships for college students pursuing a teaching degree in these fields. In addition, it will allow school districts to amend their curriculum to take advantage of advances in technology.

The bottom line is that if we do not have the trained work force to fill these jobs, some other country will. We have got to act now, and I commend the Education and Science Committees for the bipartisan way in which they fashioned this bill. While H.R. 1699 is not the end-all be-all, it is an important first step, and I urge its passage.●

● Mr. FRENZEL. Mr. Chairman, here is another example of Congress rushing to get on board a popular wagon. As usual, proponents are saying it will solve our problem.

Actually, we are voting on another expensive symbol. We are asking the taxpayers to shell out a couple of hundred million dollars a year for a program which would not do very much other than to signal congressional interest in providing better math and engineering education at all levels. Better we should have passed a commendatory resolution.

Unfortunately, H.R. 1699 is also an example of something else. It is an example of the old politics of the 1930's. It is another bill that would not do much except whet appetites for more.

Local people, parents, educators, and elected officials are concerned that so little planning has gone into the consideration of H.R. 1699. Nobody has a good idea how it works.

Spending the peoples' money requires better work than has gone into this bill. Everybody wants instant engineers and computer whizzes, but this bill is unlikely to produce them. We can do much better.●

● Mr. MILLER of California. Mr. Speaker, the Emergency Mathematics and Science Education Act is a first important step toward solving our national problem and mathematical and scientific literacy.

Our Nation's elementary and secondary mathematics and science education is suffering from neglect. We know this especially well in California, birthplace of high-technology industry. In my own district of Contra Costa County, major employers have told me that many high school graduates they interview for entry level jobs come ill prepared in mathematics and science. Throughout the State, colleges and universities are complaining that too many students require remedial education prior to the start of college level work. A recent report to the California Business Roundtable concluded:

> The evidence suggests that California students are not now being adequately prepared for college or work, and that current levels of achievement are well below those attained one or two decades ago.

This decline in achievement could have potentially ominous consequences for our State's high-technology industries which are highly dependent on a well-educated work force. In 1982, I held a hearing in San Francisco on the need to improve our educational systems to prepare students for further training and jobs in high technology. Gary Peterson, of the Electronic Industries Association, testified at that hearing.

> No matter whether you are talking about literacy in computer science or literacy in the basic electronics industry, we cannot basically use people who are not skilled or . . . disciplined in such things as basic science and math.

In some cases, this lack of trained personnel has led these companies to go abroad to meet their needs.

At the same time, Armando Picciotto, computer science teacher and district computer coordinator for the Richmond Unified School District, in my own district, reported:

I saw the (shortage of trained personnel) first hand last year while working at Fairchild in San Jose during a leave of absence from my teaching duties. I was amazed at the number of skilled and semi-skilled technicians that the company had imported from Singapore, the Philippines, Hong Kong and even Europe because they could not find enough qualified people locally.

The California Commission on Industrial Innovation, whose members include leaders of business, labor, and education, recommended in their report on enhancing industrial innovation and productivity, that:

The United States should mobilize national resources to support math, science, computer engineering and high technolgy vocational education . . .

Mr. Speaker, we are beginning this mobilization today with the passage of the emergency Mathematics and Science Foundation Act. I am proud to have played an active role in the development of this landmark legislation.

Because of the immediate need to rectify this education crisis, we have focused the act on improving existing teacher's knowledge of mathematics and science, including instruction in the use of computers. In drafting several portions of this act, I made certain that every teacher who has responsibility for mathematics and science education is eligible for additional training. I was particularly concerned that elementary teachers, who often teach mathematics and science as part of a broader educational program, be included. Elementary teachers, while far less likely than secondary teachers to have extensive education in mathematics and science, strongly influence student attitudes toward these subjects. If we lose a student's interest in fourth grade, there is a good possibility we will lose it for a lifetime.

To a large degree, the success of a school's educational program is dependent upon the leadership of the school principal. I have included a special provision in the act to provide principals with inservice training in mathematics, science, and the use of computers. While the principals will not be teaching these subjects, this training can offer special insights to the curriculum and new teaching approaches which will help them support their mathematics and science teachers.

Throughout my district I have heard of many creative projects by teachers to improve mathematics and science teaching. In response to several teachers' suggestions, I included a program of teacher initiative grants to reward and encourage such efforts. Under this program, any teacher who has attended training provided by this act may apply for a personal grant to enhance their classroom teaching of mathematics, science, or technology. Grants might be made for the purchase of equipment for a special project or demonstration, purchase of specialized reference materials, or underwriting the cost of bringing a lecturer to the classroom or school for student and faculty enrichment.

Important as the legislation is, it is only a beginning. In particular, our vocational training programs need similar direction. The rapidly changing nature of technology, and the demand for highly trained technicians, in combination with unwise reduction in education funding in recent years, have resulted in many of our programs falling behind. A spokesman for over 500 high-technolgy companies recently told a hearing on vocational education that "training within the vocational education system has not been relevant to employers' needs." The solution to this training problem can best be found by encouraging business and vocational educators to work together.

I will soon introduce the High-Technology Training Act of 1983. This legislation will amend the existing Vocational Education Act to provide thousands of workers and students with new opportunities to train for rewarding careers in high technology.

Working together, these two pieces of legislation will raise the mathematical and scientific literacy of our Nation's students while encouraging the public sector-State and local governments and school systems—to work more closely with the private sector in planning educational programs which will provide students and workers the basic skills they need for a wide range of occupations and further education.●

The CHAIRMAN. The time of the gentleman has expired, and all time has expired.

Pursuant to the rule, the text of H.R. 1699 is considered by titles as an original bill for the purpose of amendment under the 5-minute rule in lieu of the amendments recommended by the Committees on Education and Labor, and Science and Technology, and each title is considered as having been read. It shall be in order to consider an amendment to title I of said substitute made in order by House Resolution 109 which shall be considered as an amendment recommended by the Committee on Science and Technology.

The Clerk will designate title I.

Title I of H.R. 1699 reads as follows:

H.R. 1699

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—EMERGENCY MATHEMATICS AND SCIENCE EDUCATION ASSISTANCE

SHORT TITLE

SEC. 101. This title may be cited as the "Emergency Mathematics and Science Education Act".

AMENDMENTS TO THE NATIONAL DEFENSE EDUCATION ACT OF 1958

SEC. 102. (a) The National Defense Education Act of 1958 is amended by adding the following new title:

"TITLE VI—EMERGENCY MATHEMATICS AND SCIENCE EDUCATION

"PART A—ELEMENTARY AND SECONDARY ASSISTANCE

"FINDINGS

"SEC. 601. The Congress finds that in order to enhance our Nation's economic productivity and ensure an adequate number of skilled individuals to meet our national defense needs, it is necessary (1) to improve the quality of instruction and levels of student achievement in mathematics and science at the elementary and secondary education levels, and (2) to increase the supply and strengthen the qualifications of teachers of mathematics and science at the elementary and secondary education levels.

"AUTHORIZATION OF APPROPRIATIONS TO THE DEPARTMENT OF EDUCATION

"SEC. 602. (a) There are authorized to be appropriated to the Department of Education to carry out this part $250,000,000, for fiscal year 1984, and such sums as may be necessary for fiscal year 1985.

"(b) No funds are authorized to be appropriated to carry out this part for any fiscal year if the amount appropriated to carry out chapter 1 of the Education Consolidation and Improvement Act of 1981 for such fiscal year does not equal or exceed the amount appropriated to carry out such chapter for the preceding fiscal year.

"ALLOCATION OF FUNDS

"SEC. 603. (a)(1) From the amount appropriated under section 602 for any fiscal year, the Secretary shall reserve—

"(A) one per centum for allocation among Guam, the Virgin Islands, American Samoa, the Northern Mariana Islands, and the Trust Territory of the Pacific Islands in proportion to their allocations under chapter 1 of the Education Consolidation and Improvement Act of 1981; and

"(B) one-half of one per centum for payment to the Secretary of the Interior for use in Bureau of Indian Affairs schools for programs consistent with the purposes of this part.

"(2) The remainder of the amount so appropriated (after meeting the requirements of paragraph (1)) shall be allocated among the States (treating the District of Columbia and Puerto Rico as States) as follows:

"(A) One-half of such remainder shall be allocated among the States in the same manner as is required by the second sentence of section 302(a)(1) of this Act.

"(B) One-half of such remainder shall be allocated among the States by allocating to each State an amount which bears the same ratio to that one-half of such remainder as—

"(i) the product of the school-age population of such State, multiplied by a fraction equal to (I) the per pupil expenditure amount determined under the second sentence of section 111(a)(2)(A), or under section 111(a)(2)(C), of the Elementary and Secondary Education Act of 1965 with respect to such State, divided by (II) the average per pupil expenditure in the United States as determined under section 198(a)(2) of such Act, bears to

"(ii) the sum of such products for all the States.

"(b)(1) From the amount allocated to any State pursuant to subsection (a) the State educational agency may reserve not more than 25 per centum of such amount for the conduct of State programs, planning, and administration pursuant to section 605.

"(2) The remainder of the amount allocated to any State pursuant to subsection (a) which is not reserved under paragraph (1) shall be allocated by the State educational agency among the local educational agencies in that State in proportion to their most recent allocations under chapter 1 of the Education Consolidation and Improvement Act of 1981.

"USE OF FUNDS BY LOCAL EDUCATIONAL AGENCIES; APPLICATION

"SEC. 604. (a) Funds made available to any local educational agency pursuant to this part shall be used, in accordance with a local application certified to meet the requirements of subsection (c) by the State educational agency—

"(1) first, to assess the needs for improvement of mathematics and science education in the school district of that local educational agency, including the needs of traditionally underrepresented groups, to determine methods for meeting those needs, and to provide services to aid school administrators and school board members in assessing those needs;

"(2) upon completion of activities under paragraph (1), for (A) in-service training (i) to improve teacher knowledge of and teaching skills in mathematics, science, and their applications, (ii) to train school principals for the supervision of course offerings in mathematics, science, and their applications, and (iii) to recertify teachers of other subjects as mathematics and science teachers; and (B) payment of expenses related to teachers attending (i) State-operated teacher training programs in mathematics and science, including programs under section 605, and (ii) summer institutes funded under section 624 of this title; and

"(3) after meeting the needs of teachers in the school district of the local educational agency for the programs described in paragraph (2), for any other activity to modernize, expand, or improve instructional programs in mathematics and science in the school district of that agency.

"(b) In meeting the needs of teachers for programs described in paragraph (2) of subsection (a) and in carrying out activities under paragraph (3) of such subsection, local educational agencies shall give thorough consideration to the establishment of such programs and activities in conjunction with other such agencies, the State educational agency, educational service agencies, area vocational education schools, and institutions of higher education. Such agencies are also authorized to establish such programs and activities in conjunction with private business enterprises, museums, libraries, and other public and private organizations and agencies.

"(c) The application to the State educational agency required by subsection (a) shall consist of (1) an assurance that the local educational agency will comply with applicable Federal audit requirements, and (2) satisfactory information to ensure that the local educational agency will use the funds received hereunder in a manner consistent with the purposes of this part and in accordance with section 607.

"(d) All in-service teacher training provided under this section shall be in programs which meet any mandatory State standards for teacher training, retraining, and professional development.

"STATE USE OF FUNDS; STATE PLAN

"SEC. 605. (a)(1) Funds made available to any State educational agency under section 603(b)(1) shall, in accordance with a State plan certified to meet the requirements of this part (including section 607) by the Secretary, be used (A) for programs described in subsection (b) or (c), or (B) for other programs to meet State priorities for modernizing, expanding, and improving mathematics and science education in the State.

"(2) Such programs may be operated directly by such agency or under grants to or contracts with local educational agencies and institutions of higher education. Such funds may be used for programs described in clause (B) of paragraph (1) only after the need in such State for programs described in clause (A) of such paragraph has been met.

"(3) Such funds may be made available as grants to local educational agencies in accordance with criteria established by the State educational agency which emphasize assisting school districts with special needs. Such grants may include grants for—

"(A) cooperative programs developed by rural school districts to maximize in-service training efforts within rural regions or States, develop mathematics and science curricula that take into consideration the special needs of rural regions or rural States, and facilitate cooperative efforts of rural school districts with institutions of higher education and other public or private nonprofit organizations to enhance service delivery; and

"(B) efforts to increase the representation of typically underrepresented groups.

"(b)(1) Funds allocated to a State educational agency pursuant to section 603(b)(1) may be used for—

"(A) in-service training (i) to improve teacher knowledge of and teaching skills in mathematics, science, and their applications, (ii) to train school principals for the supervision of course offerings in mathematics, science, and their applications, (iii) to recertify teachers of other subjects as mathematics and science teachers;

"(B) payment of expenses related to teachers attending summer institutes funded under section 624 of this title.

"(2) In carrying out activities under paragraph (1)(A), the State educational agency shall give thorough consideration to the establishment of such activities in conjunction with local educational agencies, educational service agencies, area vocational education schools, and institutions of higher education.

"(c)(1) At least 20 per centum of the funds allocated to a State educational agency pursuant to section 603(b)(1) shall be used for making grants to provide not more than one-half the cost of joint programs to improve mathematics and science education. Such programs shall be operated by local educational agencies in conjunction with private business enterprises, institutions of higher education, museums, libraries, or other public or nonprofit private organizations and agencies. Private sector personnel shall be under the supervision of State certified teachers when instructing students in the school classroom. Such programs may include—

"(A) training of teachers in programs operated by the private sector;

"(B) use of private sector personnel (i) to donate time in elementary and secondary schools for improvement of mathematics and science education and (ii) to train teachers in mathematics and science;

"(C) sharing of equipment and facilities;

"(D) on-site mathematics and science instruction at private sector facilities; and

"(E) improving the skills of teachers while employed in summer jobs.

"(2) Funds available under chapter 2 of the Education Consolidation and Improvement Act of 1981 may be used to meet the other one-half of the cost of a program under this subsection, but no other Federal funds may be used to meet that requirement.

"(d) Not more than 12 per centum of the funds available under section 603(b)(1) may be used by the State educational agency for the cost of administration of programs under this part.

"REQUIREMENT TO SUPPLEMENT NOT SUPPLANT

"SEC. 606. A State or local educational agency may use funds received under this part only so as to supplement and, to the extent practicable, increase the level of funds that would, in the absence of funds received under this part, be made available from non-Federal sources for programs and activities assisted under this part.

"PARTICIPATION REQUIREMENT

"SEC. 607. Each State and local educational agency shall take appropriate steps to ensure equal educational opportunity and the full participation of traditionally underrepresented groups, including women and racial and ethnic minorities, in assessment, planning, in-service training, joint programs, and other programs assisted with funds made available under this part.

"PARTICIPATION OF CHILDREN AND TEACHERS FROM PRIVATE SCHOOLS

"SEC. 608. (a) To the extent consistent with the number of children in the State or in the school district of each local educational agency who are enrolled in private elementary and secondary schools, such State or agency shall, after consultation with appropriate private school representatives, make provision for including special educational services and arrangements (such as dual enrollment, educational radio and television, and mobile educational services and equipment) in which such children can participate and which meet the requirements of this part. Expenditures for educational services and arrangements pursuant to this subsection for children in private schools shall be equal (taking into account the number of children to be served and the needs of such children) to expenditures for children enrolled in the public schools of the State or local educational agency.

"(b) To the extent consistent with the number of children in the State or in the school district of a local educational agency who are enrolled in private elementary and secondary schools, such State or agency after consultation with appropriate private school representatives shall make provision for including teachers from such schools in programs and activities conducted with funds available under this part. Expenditures for such teachers shall be equal (taking into account the number of children served by such private schools) to expenditures for teachers in the public schools of the State or local educational agency.

"(c) If by reason of any provision of law a State or local educational agency is prohibited from providing for the participation of children or teachers from private schools as required by subsections (a) and (b), or if the Secretary determines that a State or local

educational agency has substantially failed or is unwilling to provide for such participation on an equitable basis, the Secretary shall waive such requirements and shall arrange for the provision of services to such children or teachers which shall be subject to the requirements of this section. Such waivers shall be subject to consultation, withholding, notice, and judicial review requirements in accordance with section 557(b) (3) and (4) of the Education Consolidation and Improvement Act of 1981.

"CONTROL OF FUNDS

"SEC. 609. A State or local educational agency may receive funds under this part only if control of such funds, and title to property derived from such funds, is in a public agency, and only if a public agency will administer such funds and property.

"EVALUATION AND DISSEMINATION

"SEC. 610. (a) Each State plan and local educational agency application under this part for fiscal 1985 or any succeeding fiscal year shall contain an evaluation of the programs conducted under this part. Such report shall include (1) a description of the needs determined to exist for in-service teacher training as described in section 604(a)(2); (2) the extent to which training provided under this part during the preceding year has met that need; and (3) a specific list of the expenditures made.

"(b) The Secretary shall utilize the national diffusion network operated under chapter 2 of the Education Consolidation and Improvement Act of 1981 to disseminate information concerning particularly successful programs under this part to other State and local educational agencies.

"PART B—POSTSECONDARY ASSISTANCE

"FINDINGS

"SEC. 621. (a) The Congress finds that it is necessary (1) to improve the educational foundations of American citizens in order to improve the Nation's economic productivity, (2) to encourage students in postsecondary education to pursue teaching careers in mathematics, science, and foreign language, and (3) to improve the quality of instruction in colleges of teacher education.

"(b) The Congress declares that it is therefore necessary (1) to increase the number and quality of postsecondary students entering careers in teaching, (2) to improve the quality of instruction for future teachers of mathematics, science, and foreign language, (3) to provide enriched opportunities for currently employed teachers, and (4) to evaluate (A) current teaching techniques, including technological improvements in classroom equipment and instructional methods, and (B) methods of improving instruction.

"NATIONAL TEACHING SCHOLARSHIPS

"SEC. 622. (a)(1) Sums available for the purpose of this section shall be used to award national teaching scholarships in accordance with this section to not more than five thousand individuals for fiscal year 1984, and to not more than ten thousand individuals for fiscal year 1985. Such scholarships may not exceed an amount equal to the tuition and fee expenses of any recipient for two academic years (of undergraduate or graduate education) and may be paid only upon proof of satisfactory achievement in the preceding academic year.

"(2) The Secretary of Education may reserve up to 30 per centum of the sums available for national teaching scholarships to make awards to individuals who are currently teachers for one year of study at an institution of higher education. Such awards shall not exceed $5,000 to cover the cost of attendance at such institution and related expenses.

"(b) Each chief State school officer or appropriate State officer responsible for postsecondary education may provide to the Secretary of Education the names and qualifications of a number of individuals who are qualified to receive national teaching scholarships which does not exceed the product of the number of Members of Congress from that State, multiplied by twenty. The chief school officers of the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, the Northern Mariana Islands, and the Trust Territory of the Pacific Islands may each provide to the Secretary the name and qualifications of not more than fifty such individuals. Such nominations shall be supported by suitable academic credentials and recommendations, and shall include a personal statement by the individual expressing a commitment to pursue a career in teaching.

"(c)(1) National teaching scholars shall be selected by a committee composed of the Librarian of Congress (acting as chairman), the Secretary of Education, the Director of the Office of Science and Technology Policy, the Director of the National Science Foundation, the Administrator of the National Aeronautics and Space Administration, four individuals appointed by the Speaker of the House of Representatives, and four individuals appointed by the majority leader of the Senate. The individuals appointed by the Speaker and the majority leader shall be individuals (A) who are prominent in public or private elementary, secondary, or postsecondary education, such as teachers, professors, administrators, or officials, (B) who are in private business enterprises and who have a thorough understanding of the requirements for educated employees of business, or (C) who are members of the public, including parents of students and students.

"(2) Selections of national teaching scholars shall be made in accordance with regulations prescribed by the Secretary of Education after consultation with the Librarian of Congress, the Director of the National Science Foundation, and the Director of the Office of Science and Technology Policy. Individuals shall be selected on the basis of merit and shall be pursuing a course of instruction in science, mathematics, foreign language, or other course of study identified by the chief State school officer of the pertinent State as having a critical shortage of qualified teachers. The committee shall ensure that the individuals so selected include individuals who are unrepresented or underrepresented in the respective disciplines. The committee shall also assure appropriate geographic distribution of national teaching scholarships.

"(d) To be eligible for selection as a national teaching scholar, an individual shall have completed the equivalent of at least two years toward a baccalaureate degree and shall have formally expressed the intention to teach elementary or secondary school mathematics, science, foreign language, or other appropriate subject for at least two years for each year for which assistance is received under this section.

"(e) Each national teaching scholar shall be obligated to teach for two years for each year of scholarship assistance received, or to repay the total amount of the scholarship, plus interest at a rate prescribed by the Secretary of Education.

"(f) Notwithstanding the provisions of section 428(a)(2)(B) through (F) and section 482(a)(1) and (2) of the Higher Education Act of 1965, scholarship funds awarded pursuant to subsection (a) shall not be considered in determining eligibility for student assistance under title IV of such Act, but the sum of student assistance received under such title and a national teaching scholarship shall not exceed the cost of attendance (as such term is defined in section 482(d) of such Act).

"POSTSECONDARY MATHEMATICS, SCIENCE, AND FOREIGN LANGUAGE IMPROVEMENT

"SEC. 623. (a) Funds available for this section for fiscal year 1984 or 1985 shall be made available by the Secretary of Education for competitive grants to institutions of higher education for undergraduate mathematics, science, and foreign language curriculum improvement and faculty development, in consultation with the school or department of education at that institution. Such programs shall be directed to improving instruction in mathematics, science, and foreign languages for degree and nondegree students who have or who are pursuing teaching certificates.

"(b) Twenty-five per centum of the funds available pursuant to subsection (a) for fiscal year 1984 or 1985 shall be made available by the Secretary for programs described in such subsection to institutions of higher education which are eligible for assistance under title III of the Higher Education Act of 1965.

"SUMMER INSTITUTES

"SEC. 624. From the funds available for this section for fiscal year 1984 or 1985, the Secretary of Education shall make grants to institutions of higher education to support summer institutes and workshops for supervisors and certified teachers in elementary and secondary schools to improve the knowledge and skills of such teachers in the areas of mathematics, science, and foreign language, and to improve their instructional skills. Such institutes may, to the extent possible, involve the cooperation of advanced technology firms and other private industries which are able to supply assistance in the teaching of mathematics and science. Such institutes may also be conducted in such other areas as determined by the Secretary. Upon request of the State educational agency, the Secretary may make grants to other public teacher training agencies as established by the State educational agency prior to January 1, 1983.

"INVESTIGATIONS OF EFFECTIVE EDUCATIONAL METHODS AND PROGRAMS

"SEC. 625. (a) The Director of the National Institute of Education, in consultation with appropriate Federal agencies, shall conduct investigations of effective methods of instruction, and effective educational programs, in mathematics, science, and foreign language (including technical literacy and methods to secure full participation of women and racial and ethnic minorities). Such studies may include—

"(1) teaching and learning research in mathematics, science, and foreign languages and on the instructional uses of information technologies;

"(2) application of teaching and learning research to the local and private sector development of instructional materials, and to the improvement of teacher training programs;

"(3) secondary school operations as they affect student learning in mathematics, science, and foreign languages; and

"(4) analysis of local and institutional policies enhancing or inhibiting the recruitment, retention, and improvement of mathematics, science, and foreign languages faculties.

"(b) There are authorized to be appropriated to the Department of Education and made available to the National Institute of Education and the Fund for the Improvement of Postsecondary Education to carry out this section not more than $5,000,000 for each of the fiscal years 1984 and 1985.

"LIMITATION

"SEC. 626. Notwithstanding any other provision of this part, the total amount which may be appropriated pursuant to this part for fiscal year 1984 shall not exceed $50,000,000, of which not less than—

"(1) 40 per centum shall be available to carry out section 622; and

"(2) 15 per centum shall be available to carry out section 623; and

"(3) 35 per centum shall be available to carry out section 624.

"PART C—TEACHER INITIATIVE GRANTS

"AUTHORIZATION OF APPROPRIATIONS TO THE DEPARTMENT OF EDUCATION

"SEC. 641. There are authorized to be appropriated to the Department of Education to carry out this part such sums as may be necessary for fiscal year 1985.

"ALLOCATION OF APPROPRIATIONS

"SEC. 642. The amount appropriated pursuant to section 651 for any fiscal year shall be allocated among the States in the same manner as is required by section 603(a) of this title.

"USE OF FUNDS

"SEC. 643. (a) Funds made available to any State pursuant to this part shall be used to make grants to teachers, who have completed in-service or other training under part A or B of this title, for teacher-initiated projects to improve mathematics, science, and technology education. Such uses may include—

"(1) purchase of equipment for a specific classroom project or demonstration;

"(2) purchase of specialized reference materials;

"(3) transportation and other costs of participation for class visits to science museums, computer centers, laboratories, or institutions involved in research and development; and

"(4) underwriting the cost of bringing special equipment or lecturers to the classroom or school for student and faculty enrichment.

"(b) From the amount available to any State, the State educational agency may reserve not more than 1 per centum of such amount for the conduct of State administration and activities to assist teachers in formulating programs eligible for grants under this part.".

(b) Section 103 of the National Defense Education Act of 1958 is amended to read as follows:

"DEFINITIONS

"SEC. 103. Except as otherwise provided therein, the following terms are defined for purposes of this Act:

"(1) The term 'State' means any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Northern Mariana Islands, or the Trust Territory of the Pacific Islands.

"(2) The term 'institution of higher education' has the same meaning given such term in section 1201(a) of the Higher Education Act of 1965.

"(3) The term 'Secretary' means the Secretary of Education.

"(4) The term 'State educational agency' has the same meaning given such term in section 198 of the Elementary and Secondary Education Act of 1965.

"(5) The term 'school-age population' means that part of the population which is between the ages of five and seventeen, both inclusive, and such school-age population for the several States shall be determined by the Secretary on the basis of the population between such ages for the most recent year for which satisfactory data are available from the Department of Commerce.

"(6) The term 'elementary school' has the same meaning given such term in section 198 of the Elementary and Secondary Education Act of 1965.

"(7) The term 'secondary school' has the same meaning given such term in section 198 of the Elementary and Secondary Education Act of 1965.

"(8) The term 'local educational agency' has the same meaning given such term in section 198 of the Elementary and Secondary Education Act of 1965.".

MINORITY INSTITUTIONS SCIENCE IMPROVEMENT

SEC. 103. Section 406A of the General Education Provisions Act (as added by the Education Amendments of 1980; 94 Stat. 1497) is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS FOR SCIENCE IMPROVEMENT PROGRAM

"SEC. 406A. There are authorized to be appropriated $5,000,000 for each of the fiscal years 1984 and 1985 for the purpose of carrying out the minority institutions science improvement program transferred to the Secretary from the National Science Foundation by section 304 of the Department of Education Organization Act.".

SCIENCE AND TECHNOLOGY COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will report the amendment recommended by the Committee on Science and Technology.

The Clerk read as follows:

Committee on Science and Technology amendment: Strike out line 22 on page 13 and all that follows through line 8 on page 24 and insert in lieu thereof the following:

"PART B—POSTSECONDARY ASSISTANCE

"FINDINGS

"SEC. 621. (a) The Congress finds that it is necessary (1) to improve the educational foundations of American citizens in order to improve the Nation's economic productivity, (2) to encourage students in postsecondary education to pursue teaching careers in mathematics, science, and critical foreign languages, (3) to encourage members of groups now underrepresented in mathematics, science, and critical foreign language teaching, including women, racial and ethnic minorities, and the handicapped, to pursue such careers, and (4) to improve the quality of instruction in colleges of teacher education.

"(b) The Congress declares that it is therefore necessary (1) to increase the number and quality of postsecondary students entering careers in teaching, (2) to increase the number and quality of students entering teaching from groups now underrepresented in mathematics, science, and critical foreign languages, including women, racial and ethnic minorities, and the handicapped, (3) to improve the quality of instruction for future teachers of mathematics, science, and critical foreign languages, (4) to utilize the National Science Foundation when developing and monitoring programs designed to improve the quality of instruction for future teachers of mathematics and science, (5) to provide enriched opportunities for currently employed teachers, and (6) to evaluate (A) current teaching techniques, including technological improvements in classroom equipment and instructional methods and the use of community resources such as science museums, regional centers, public television, and community colleges, and (B) methods of improving instruction.

"NATIONAL TEACHING INCENTIVE SCHOLARSHIPS

"SEC. 622. (a)(1) Sums available for the purpose of this section shall be used to award national teaching incentive scholarships in accordance with this section to not more than five thousand individuals for fiscal year 1984, and to not more than ten thousand individuals for fiscal year 1985. Such scholarships may not exceed an amount equal to the tuition and fee expenses of any recipient for two academic years (of undergraduate or graduate education) and may be paid only upon proof of satisfactory achievement in the preceding academic year.

"(2) The Secretary of Education may reserve up to 30 per centum of the sums available for national teaching incentive scholarships to make awards to individuals who are currently teachers for one year of study at an institution of higher education. Such awards shall not exceed $5,000 to cover the cost of attendance at such institution and related expenses.

"(3) The Secretary of Education may reserve up to 10 per centum of the sums available for national teaching incentive scholarships for individuals pursuing a course of instruction in a critical foreign language.

"(b) Each chief State school officer or appropriate State officer responsible for postsecondary education may provide to the Secretary of Education the names and qualifications of a number of individuals who are qualified to receive national teaching incentive scholarships which does not exceed the product of the number of Members of Congress from that State, multiplied by twenty. The chief school officers of the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, the Northern Mariana Islands, and the Trust Territory of the Pacific Islands may each provide to the Secretary the name and qualifications of not more than fifty such individuals. Such nominations shall be supported by suitable academic credentials and recommendations, and shall include a personal statement by the individual expressing a commitment to pursue a career in teaching.

"(c)(1) Recipients of national teaching incentive scholarships shall be selected by a committee composed of the Librarian of Congress (acting as chairman), the Secretary of Education, the Director of the Office of Science and Technology Policy, the Director of the National Science Foundation, the Administrator of the National Aeronautics and Space Administration, four individuals appointed by the Speaker of the House of Representatives, and four individ-

uals appointed by the majority leader of the Senate. The individuals appointed by the Speaker and the Majority Leader shall be individuals (A) who are prominent in public or private elementary, secondary, or post-secondary education, such as teachers, professors, administrators, or officials, (B) who are practicing scientists or mathematicians, (C) who are in private business enterprises and who have a thorough understanding of the requirements for educated employees of business, or (D) who are members of the public, including parents of students and students.

"(2) Selections of recipients of national teaching incentive scholarships shall be made in accordance with regulations prescribed by the Secretary of Education after consultation with the Librarian of Congress, the Director of the National Science Foundation, and the Director of the Office of Science and Technology Policy. Individuals shall be selected on the basis of merit and shall be pursuing a course of instruction in science, mathematics, or a critical foreign language. The committee shall ensure that the individuals so selected include individuals who are unrepresented or underrepresented in the respective disciplines, including women, racial and ethnic minorities, and the handicapped. The committee shall also assure appropriate geographic distribution of national teaching incentive scholarships.

"(d) To be eligible for selection as a national teaching incentive scholarship, an individual shall have completed the equivalent of at least two years toward a baccalaureate degree and shall have formally expressed the intention to teach elementary or secondary school mathematics, science, or critical foreign language for at least two years for each year for which assistance is received under this section.

"(e) Each recipient of a national teaching incentive scholarship shall be obligated to teach for two years for each year of assistance received, or to repay the total amount of the scholarship, plus interest at a rate prescribed by the Secretary of Education.

"(f) Notwithstanding the provisions of section 428(a)(2) (B) through (F) and section 482(a) (1) and (2) of the Higher Education Act of 1965, funds awarded pursuant to subsection (a) shall not be considered in determining eligibility for student assistance under title IV of such Act, but the sum of student assistance received under such title and a national teaching scholarship shall not exceed the cost of attendance (as such term is defined in section 482(d) of such Act). However, this subsection shall not be construed to require the payment of a scholarship of less than $1,000.

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 623. Notwithstanding any other provision of this part, there are authorized to be appropriated to carry out this part $20,000,000 for fiscal year 1984 and such sums as may be necessary for fiscal year 1985.

"PART C—TEACHER INITIATIVE GRANTS

"AUTHORIZATION OF APPROPRIATIONS TO THE DEPARTMENT OF EDUCATION

"SEC. 641. There are authorized to be appropriated to the Department of Education to carry out this part $5,000,000 for fiscal year 1985.

"ALLOCATION OF APPROPRIATIONS

"SEC. 642. The amount appropriated pursuant to section 651 for any fiscal year shall be allocated among the States in the same manner as is required by section 603(a) of this title.

"USE OF FUNDS

"SEC. 643. (a) Funds made available to any State pursuant to this part shall be used to make grants to teachers, who have completed inservice or other training under parts A or B of this title, for teacher initiated projects to improve mathematics, science, and technology education. Such uses may include—

"(1) purchase of equipment for a specific classroom project or demonstration;

"(2) purchase of specialized reference materials;

"(3) transportation and other costs of participation for class visits to science museums, computer centers, laboratories, or institutions involved in research and development; and

"(4) underwriting the cost of bringing special equipment or lecturers to the classroom or school for student and faculty enrichment.

"(b) From the amount available to any State, the State educational agency may reserve not more than one per centum of such amount for the conduct of State administration and activities to assist teachers in formulating programs eligible for grants under this part.".

(b) Section 103 of the National Defense Education Act of 1958 is amended to read as follows:

"DEFINITIONS

"SEC. 103. Except as otherwise provided therein, the following terms are defined for purposes of this Act:

"(1) The term 'State' means any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Northern Mariana Islands, or the Trust Territory of the Pacific Islands.

"(2) The term 'institution of higher education' has the same meaning given such term in section 1201(a) of the Higher Education Act of 1965.

"(3) The term 'Secretary' means the Secretary of Education.

"(4) The term 'State educational agency' has the same meaning given such term in section 198 of the Elementary and Secondary Education Act of 1965.

"(5) The term 'school-age population' means that part of the population which is between the ages of five and seventeen, both inclusive, and such school-age population for the several States shall be determined by the Secretary on the basis of the population between such ages for the most recent year for which satisfactory data are available from the Department of Commerce.

"(6) The term 'elementary school' has the same meaning given such term in section 198 of the Elementary and Secondary Education Act of 1965.

"(7) The term 'secondary school' has the same meaning given such term in section 198 of the Elementary and Secondary Education Act of 1965.

"(8) The term 'local educational agency' has the same meaning given such term in section 198 of the Elementary and Secondary Education Act of 1965.".

SUMMER INSTITUTES AND WORKSHOPS

SEC. 103. (a) From the funds available for this section, the Secretary of Education and the Director of the National Science Foundation shall make grants to institutions of higher education (as that term is defined in section 1201(a) of the Higher Education Act of 1965) to support summer institutes and other workshops for supervisors and teachers in elementary and secondary schools to improve the knowledge and skills of such teachers in the areas of mathematics, science, and critical foreign languages, and to improve their instructional skills. Such institutes may, to the extent possible, involve the cooperation of advanced technology firms and other private industries which are able to supply assistance in the teaching of mathematics and science. Upon request of the State educational agency, the Secretary or the Director of the National Science Foundation may make grants to other public teacher training agencies as established by the State educational agency prior to January 1, 1983.

(b) The Secretary of Education and the Director of the National Science Foundation shall each prepare a program implementation plan for the programs under this section. Such plans shall provide for appropriate coordination of such programs by the Department of Education and the National Science Foundation. No funds may be obligated for expenditure under or expended for any such program unless—

(1) a period of thirty calendar days (excluding any day on which either House of Congress is not in session because of an adjournment of more than three days to a day certain) has passed after the Secretary of Education or the Director of the National Science Foundation, respectively, has transmitted such plan to the appropriate committees of the House of Representatives and the Senate; or

(2) each such committee before the expiration of such period has transmitted to the Secretary or the Director a written notice to the effect that such committee has no objection to the plan.

POSTSECONDARY MATHEMATICS, SCIENCE, AND CRITICAL FOREIGN LANGUAGE IMPROVEMENT

SEC. 104. (a) Funds available for this section shall be made available by the Director of the National Science Foundation for competitive grants to institutions of higher education (as that term is defined in section 1201(a) of the Higher Education Act of 1965) for undergraduate mathematics science, and critical foreign language curriculum improvement and faculty development, in consultation with the school or department of education at that institution. Such programs shall be directed to improving instruction in mathematics, science, and critical foreign languages for degree and nondegree students who have or who are pursuing teaching certificates.

(b) Twenty-five per centum of the funds available pursuant to subsection (a) for any fiscal year shall be made available by the Director of the National Science Foundation for programs described in such subsection to institutions of higher education which are eligible for assistance under title III of the Higher Education Act of 1965.

INVESTIGATIONS OF EFFECTIVE EDUCATIONAL METHODS AND PROGRAMS

SEC. 105. (a) The Director of the National Science Foundation, in consultation with the Director of the National Institute of Education, shall conduct investigations of effective methods of instruction, and effective educational programs, in mathematics, science, and critical foreign languages (including technical literacy and methods to secure full participation of women and racial and ethnic minorities). Such studies may include—

(1) teaching and learning research in mathematics, science, and critical foreign

languages and in the instructional uses of information technologies;

(2) application of teaching and learning research to the local and private sector development of instructional materials, and to the improvement of teacher training programs;

(3) research on the effective use of community resources such as science museums, regional centers, public television, community colleges, and local industries in the teaching of mathematics and science;

(4) investigation of the affect of secondary school operations on student learning in mathematics, science, and critical foreign languages;

(5) analysis of local and institutional policies enhancing or inhibiting the recruitment, retention, and improvement of mathematics, science, and critical foreign languages faculties; and

(6) analysis of effective materials and methods of instruction used in other nations, and their potential application in the United States.

(b) Studies conducted pursuant to subsection (a) shall be reported to the Office of Science and Technology Policy and shall be made available to the public. The Office of Science and Technology Policy shall include the results of such studies in its report to the President and the United States Congress.

MINORITY INSTITUTIONS SCIENCE IMPROVEMENT

SEC. 106. Section 406A of the General Education Provisions Act (as added by the Education Amendments of 1980; 94 Stat. 1497) is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS FOR SCIENCE IMPROVEMENT PROGRAM

"SEC. 406A. There are authorized to be appropriated $5,000,000 for each of the fiscal years 1984 and 1985 for the purpose of carrying out the Minority Institutions Science Improvement program transferred to the Secretary of Education from the National Science Foundation by section 304 of the Department of Education Organization Act.".

AUTHORIZATION OF APPROPRIATIONS

SEC. 107. (a) There is hereby authorized to be appropriated to the Department of Education $20,000,000 for each of the fiscal years 1984 and 1985 to carry the responsibilities of the Department under section 103.

(b) There is hereby authorized to be appropriated to the National Science Foundation $30,000,000 for each of the fiscal years 1984, 1985, 1986, 1987 and 1988 of which not less than—

(1) one-half shall be available to carry out the Foundation's responsibilities under section 103,

(2) one-third shall be available to carry out section 104, and

(3) one-sixth shall be available to carry out section 105.

Mr. FUQUA (during the reading). Mr. Chairman, I ask unanimous consent that the committee amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

Mr. SENSENBRENNER. Mr. Chairman, reserving the right to object, just to make clear the text that the gentleman is proposing to insert, does that include part B which begins with the title of "Postsecondary Assistance Findings"?

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. SENSENBRENNER. I yield to the gentleman from Florida.

Mr. FUQUA. The gentleman is correct.

Mr. SENSENBRENNER. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

AMENDMENTS OFFERED BY MR. FUQUA TO THE SCIENCE AND TECHNOLOGY COMMITTEE AMENDMENT

Mr. FUQUA. Mr. Chairman, I offer several amendments to the amendment offered by the Committee on Science and Technology, and I ask unanimous consent that the amendments be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. The Clerk will report the amendments.

The Clerk read as follows:

Amendments offered by Mr. FUQUA to the Science and Technology Committee amendment: Page 41, lines 1 and 2, strike out "the National Science Foundation" and insert in lieu thereof "all available Federal resources, including the National Science Foundation,".

Page 41, line 11, insert "institutions of higher education, including" before "community colleges,".

Page 49, line 20, strike out "other".

Page 50, line 13, insert after the period the following: "The Secretary of Education shall submit such plan to the Committee on Education and Labor of the House of Representatives and the Committee on Labor and Human Resources of the Senate not later than October 1 of the year preceding the award of funds under this section. The Director of the National Science Foundation shall submit such plan to the Committee on Science and Technology of the House of Representatives and the Committee on Labor and Human Resources of the Senate.".

Page 53, line 5, insert "institutions of higher education, including" after "public television,".

(Page and line references are to H.R. 1310 as reported.)

Mr. FUQUA (during the reading). Mr. Chairman, I ask unanimous consent that the amendments be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. FUQUA. Mr. Chairman, these amendments have been provided to the minority. They are technical in nature and clarify some of the language as it came out in the bill.

I am sure there is no opposition to the amendments. I will be happy to explain them should there be any request to do so, but they are technical and clarifying in nature.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. FUQUA. I yield to the gentleman from Kentucky.

Mr. PERKINS. First let me state I support the amendments, but I would like for the distinguished gentleman from Florida to clarify the differences, for the benefit of the Committee this afternoon, and I would like to ask him if it is correct that his committee has adopted no changes to the elementary and secondary education grant program in the bill, and only a few minor changes in the scholarship program?

Mr. FUQUA. The gentleman is correct.

Mr. PERKINS. And if it is also correct that you have increased the funds for summer institutes from $175.5 million in our bill to $35 million, and that you have required not only the Department of Education but also the National Science Foundation to administer these institutes?

Mr. FUQUA. The gentleman is correct.

Mr. PERKINS. And you have increased the funds for postsecondary assistance from $7.5 million to $10 million, and transferred this program from the Department of Education as we propose, to the National Science Foundation?

Mr. FUQUA. The gentleman is correct.

Mr. PERKINS. And you have also transferred responsibility for the research program from the Department of Education to the National Science Foundation?

Mr. FUQUA. The gentleman is correct.

Mr. PERKINS. Is it correct that you have placed an authorization ceiling of $5 million on the teacher incentive grant program instead of leaving an open-ended authorization as we propose?

Mr. FUQUA. The gentleman is correct.

Mr. PERKINS. Mr. Chairman, as I stated, we support all of these changes and we think the gentleman from Florida has made some improvements.

Mr. GOODLING. Mr. Chairman, will the gentleman yield?

Mr. FUQUA. I am happy to yield to the gentleman from Pennsylvania.

Mr. GOODLING. After the colloquy, I assume what you are offering is your substitute, your committee substitute?

Mr. FUQUA. I am offering my substitute, and then, as provided under the rule, which brings forth the changes that were made in the bill in the Science and Technology Committee, only those changes. The amendments that are pending now to the amendment relate to technical and clarifying changes in some of the findings sections in language that we felt

improved the bill, but they are not substantive changes.

Mr. GOODLING. I am correct in believing, then, that after you have made those technical corrections it will be open for amendment, since there are some?

Mr. FUQUA. The gentleman is absolutely correct.

Mr. GOODLING. I thank the Chairman.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Florida (Mr. FUQUA) to the Science and Technology Committee amendment.

The amendments to the Science and Technology Committee amendment were agreed to.

AMENDMENT OFFERED BY MR. SENSENBRENNER TO THE SCIENCE AND TECHNOLOGY COMMITTEE AMENDMENT

Mr. SENSENBRENNER. Mr. Chairman, I offer an amendment to the Science and Technology Committee amendment.

The Clerk read as follows:

Amendment offered by Mr. SENSENBRENNER to the Committee on Science and Technology Committee amendment: Page 40, strike out line 1, and all that follows through page 46, line 6, and insert in lieu thereof the following:

"PART B—SECONDARY SCHOOL ASSISTANCE

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 621. There are authorized to be appropriated to carry out this part $50,000,000 for fiscal year 1984 and $50,000,000 for fiscal year 1985.

"PRESIDENTIAL SCIENCE AND MATHEMATICS IMPROVEMENT PROGRAM

"SEC. 622. (a) There is hereby established within the National Science Foundation a Presidential Science and Mathematics Program Fund (hereinafter in this section referred to as the "Presidential Fund"). The Presidential Fund shall be administered by the National Science Foundation which shall promulgate guidelines for the distribution and the administration of the Presidential Fund consistent with the purposes of this section.

"(b) The purpose of the Presidential Fund shall be to improve the quality of science and mathematics instruction in the United States by helping State and local educational agencies meet the critical need to retain and obtain qualified science and mathematics teachers at the secondary school level.

"(c)(1) From the funds available for this section for any fiscal year, the National Science Foundation may reserve—

"(A) not more than 1 per centum for allocation among Guam, the Virgin Islands, and the Trust Territory of the Pacific Islands according to their respective needs for assistance.

"(B) not more than one-half of one percent for payment to the Secretary of the Interior for use in Bureau of Indian Affairs schools for programs consistent with the purposes of this section.

"(2)(A) The remainder of the amount so appropriated shall be allocated among the States (treating the District of Columbia and Puerto Rico as States) by allocating an amount which bears the same ratio to that remainder as the number of full-time students attending public instruction in grades nine through twelve, inclusive, in the State bears to the number of those students in all the States.

"(B) From the amount allocated to any State pursuant to subparagraph (A) a State may reserve not more than 5 per centum of such amount for the conduct of State administrative activities pursuant to subsection (d).

"(3)(A) The National Science Foundation may reallocate all or a portion of a State's allocation for any fiscal year if the State does not submit an application under subsection (d), or informs the Foundation that it does not need the full amount of its allocation for that fiscal year.

"(B) The National Science Foundation may reallocate funds to one or more States that have a current need for additional funds under this section. Any funds reallocated to a State shall not be deemed part of such State's regular allocation for the fiscal year in which it receives the reallocated funds.

"(4) For purposes of determining allocations under this section, the number of students attending public instruction in grades nine through twelve shall be based on the most recent data satisfactory to the National Science Foundation.

"(d)(1) Any State desiring to receive a grant under this section during any fiscal year shall submit to the National Science Foundation an application which describes how the funds under this section will be used. The application must—

"(A) describe—

"(i) how the State's program will achieve the purposes of this section, as well as the State's specific goals;

"(ii) how the funds awarded under this section will be used by the State; or to the extent the State will not operate the program directly, how the funds will be distributed to local educational agencies; and

"(B) contain assurances that the State will—

"(i) provide for such methods of administration as are necessary for the proper and efficient administration of programs under this section; and

"(ii) provide for such fiscal control and fund accounting procedures as are necessary to ensure proper disbursement and use of Federal funds paid to the State.

"(2) Each application shall contain an assessment of the success of the State's program during the preceding year, including an assessment of the extent to which the State met the purposes of this section as well as the specific goals established for that preceding year.

"(3) Prior to submitting an application to the National Science Foundation, a State shall make such application public in a manner that facilitates comment from interested groups and individuals.

"(e)(1) A State shall use a grant, either directly or through local educational agencies, to retain, or alleviate shortages of, teachers who are qualified to teach science and mathematics at the secondary level in public schools through programs considered appropriate by the State or local educational agency, including salary bonuses, summer employment, or scholarships.

"(2)(A) Any scholarships shall—

"(i) be made available only to teachers, or other individuals who have completed at least two years of full-time study toward a baccalaureate degree, to acquire the necessary qualifications to teach science or mathematics at the secondary school level;

"(ii) not exceed $5,000; and

"(iii) not exceed twelve months of academic study.

"(B) Recipients of scholarships shall agree to teach science or mathematics at the secondary school level for a period determined by the State or local educational agency.

"(C) Not less than 50 percent of such sums as may be used by a State for scholarships shall be made available to local educational agencies within such State for award of scholarships.

Mr. SENSENBRENNER (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. SENSENBRENNER. I yield to the gentleman from Florida.

Mr. FUQUA. Mr. Chairman, could I ask the gentleman to identify which amendment it is he is offering and if we have a copy of it?

Mr. SENSENBRENNER. This is the amendment that provides for secondary school assistance.

Mr. FUQUA. I do not think we have a copy of the amendment.

Mr. SENSENBRENNER. A copy of the amendment is being sent over to the gentleman.

Mr. FUQUA. I thank the gentleman.

Mr. SENSENBRENNER. Mr. Chairman, as I had indicated earlier, I am offering this amendment to begin to address the critical inability of States and local school districts to find and retain qualified math and science teachers. Unless this problem is addressed, any legislation adopted by this body will be inherently less effective and may even make the problem worse by increasing the marketability of math and science teachers, thereby increasing the flow of math and science teachers into the private sector.

The amendment would not raise the amount proposed to be authorized under the bill because, when we consider title 2, I will offer an amendment to delete $30 million under title 2.

The amendment I am offering would delete the national teaching scholarship program in title I and would replace it with a $50 million fund, under the administration of the National Science Foundation, from which States would be eligible to receive grants. These grants would be used by the States, either directly or through local educational agencies, to meet a State's particular math or science education personnel problem.

For example, States experiencing math and science teacher shortages may wish to set up scholarships for undergraduate students who want to be math or science teachers, or for current teachers who could be retrained to teach math or science. Unlike the scholarship program proposed in the bill, which calls for a

Washington-based panel to hand out the scholarships and does not require that the recipient teach within the State which nominated him, our amendment would provide for State and local control of the scholarships and require the recipient to teach within the awarding State. Thus, State and local control is maintained and the taxpayers of the State will directly benefit from the program.

For those States unable to retain qualified teachers, the amendment would permit the State to develop whatever programs are deemed appropriate by the State, including but not limited to, salary bonuses or summer employment, as proposed in the State of North Carolina to address this problem.

The amendment maintains State and local control over education, while permitting States to address their particular problems in retaining and obtaining qualified math and science teachers.

I urge your support of the amendment.

Mr. PERKINS. Mr. Chairman, will the gentleman yield to me?

Mr. SENSENBRENNER. I yield to the distinguished gentleman from Kentucky.

Mr. PERKINS. If I understand the gentleman's amendment, he is proposing to eliminate the scholarships as they are presently in the bill and is proposing higher salaries for mathematics and science teachers?

Mr. SENSENBRENNER. The gentleman is not correct in stating that. What this amendment does is it takes the money that is in the Washington-based scholarship program and sends it to the States as a block grant. The States can decide what to do with that block grant fund.

Reclaiming my time, I would say to the gentleman from Kentucky, one of the things the State could do is to provide for differential pay for math and science teachers. But to say that this amendment is mandating differential pay for math and science teachers from the Federal level is a complete red herring. That decision will be made in the 50 State capitals. What is good for Wisconsin is not necessarily good for Kentucky.

I have a great deal of faith in the State legislatures and the State superintendents of public instruction to do what is right for their State.

Mr. PERKINS. What guidelines are you giving the States insofar as the block grant is concerned? Is it similar to the Pesident's proposal or just how does it differ; can you tell us that?

Mr. SENSENBRENNER. If the gentleman from Kentucky would read pages 3 and 4 of my amendment, it says that the State application shall describe how each State's program would achieve the purposes of this section, as well as the State's specific goals, how the funds awarded would be used by the States, and to the extent the State would not operate the program directly, how those funds would be distributed.

The CHAIRMAN. The time of the gentleman from Wisconsin (Mr. SENSENBRENNER) has expired.

(By unanimous consent Mr. SENSENBRENNER was allowed to proceed for 3 additional minutes.)

Mr. SENSENBRENNER. It contains assurances that the State will provide such methods of administration as are necessary for the proper and efficient administration of programs under this section and provides for fiscal control.

Now what your bill does, sir, is to say that all this is done in Washington. You could take a teacher out of Kentucky, give him a scholarship, run him through a university to increase his skills, and that teacher can land in Virginia or Wisconsin or Texas or California, or any other State that provides for higher teacher pay. I do not think we want to see that. I think that the people who get awards in Kentucky ought to stay in Kentucky and the ones that get awards in my State ought to stay in the State of Wisconsin.

Just to make sure that the air is clear, this amendment establishes a $50 million fund under the direction of the National Science Foundation. It permits, does not require, local school districts to receive grants to address teacher shortages or teacher retention. It retains State and local control for education by permitting them to set up whatever program they deem advisable to address their particular problem.

It provides for scholarships administered by the State and local school districts to undergraduates or existing teachers to address the problem of teacher shortages.

Scholarship recipients must work in the State that awards the scholarship. The bill does not provide this, thereby not guaranteeing that each State shall benefit from the program, not just those that are the most attractive to teach in.

□ 1515

And it eliminates the national bureaucracy of the bill scholarship program. What this amendment does not do is as follows: It does not permit the Federal Government to interfere in the educational processes. The ultimate control over any program rests within States and local school districts. It does not, repeat, does not mandate teacher salary differences. Only if the States feels that that is the proper method of addressing their problem. It does not raise the total amount of money authorized because the subsequent amendment will delete $30 million under title 2. Now this is a far more sensible and a far more responsive way to address this problem than what has come out of both the Committees on Education and Labor and Science and Technology. Let us face it; we have a shortage of dollars around here. This is a major national problem and we ought to stretch those dollars as far as we possibly can by making sure that these programs are as effective as they possibly can be.

Mr. COLEMAN of Missouri. Will the gentleman yield?

Mr. SENSENBRENNER. I will be glad to yield to the gentleman.

Mr. COLEMAN of Missouri. The gentleman was pointing out what this bill is not. I think for the record to be straight, this is not the administration's proposal, per se. It is the gentleman's initiative on his own and any red herrings that might be brought along this path do not originate from the administration's bill.

Mr. SENSENBRENNER. The gentleman is correct.

Mr. PERKINS. Mr. Chairman, I rise to oppose the amendment.

First, let me say, Mr. Chairman, that this amendment is insignificant, insofar as doing anything about the problem that this country is confronted with today.

How far would $50 million go in solving a problem of this type? Anything the gentleman from Wisconsin is talking about can be done under the bill as it is written at the present time.

So, he just dilutes the program to the extent that we do not have any program at all. And when you talk about an amendment, as he states, that requires $50 million to be distributed to all States and the territories, some States maybe would receive less than $100,000, some may only receive $50,000. How can any State run a program to create an incentive to improve math and science throughout this Nation under an amendment of this kind? It just cannot be done. I am afraid this program is just an empty promise. Anything this amendment does can be done by the States and local school districts under our proposal.

I would hate to think that this Chamber would buy an amendment of this type when we are trying to improve science and mathematics teaching in this Nation today.

I do not believe the membership of this Chamber is that gullible. We want to do something to improve math and science in this country and if we approve this amendment we might as well forget about this program altogether. It is just an empty promise and it is my hope that all the Members in this Committee would vote against this amendment.

Mr. SIMON. Would the gentleman yield?

Mr. PERKINS. I yield to the gentleman from Illinois.

Mr. SIMON. Yes; I concur completely with the chairman of the committee. Let me add a couple of other points: First, we are being asked to break ground and it is amazing that it comes from that side of the aisle, that the Federal Government for the first time is going to go into this area of teacher pay. Now, the language is very fuzzy so the gentleman may deny that that is what he is doing. But that obviously is the intent. If we can do it today on science and math, tomorrow it will be second grade teachers. The precedent is set and it is attempted to be set from that side of the aisle.

Mr. Chairman, I want to make a couple of other points because that is not the only weakness of this amendment.

Second, there are 16,000 school districts in this Nation. You take this money and you dissipate it out there to 16,000 school districts and it becomes totally ineffective. What we have in our bill is a targeted kind of help that I think and the chairman thinks can be helpful.

Third, the gentleman applies it only to secondary schools while the testimony before our committees was that one of the real weaknesses is in the elementary area. And finally, and I think the chairman will concur in this, there has never been a program we have designed yet that is able to confine teachers to certain States, as the gentleman suggests he is able to do. I do not think it will work. I think the chairman has rightly pointed out the weaknesses and I concur with him completely.

Mr. SENSENBRENNER. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. I yield to the gentleman from Wisconsin.

Mr. SENSENBRENNER. Mr. Chairman, much as I regret to say, I believe both the distinguished chairman from Kentucky and the gentleman from Illinois basically misinterpret the intent of this amendment.

First, the amendment does not dilute any part of the bill except that part that is devoted to authorizing funds for the Washington-based national scholarship program.

Now, I think there will probably be an awful lot less opposition to this amendment if I did not state that there was the authority for teacher salary differences contained in the amendment. I believe that each State has got its own different problems and that the battle over teacher salary differences should be fought in the 50 State capitals rather than in the Halls of this Congress.

But I think that the last two speakers have expressed a basic lack of confidence over the ability of the several States to deal with the problem.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. SENSENBRENNER and by unanimous consent, Mr. PERKINS was allowed to proceed for 2 additional minutes.)

Mr. SENSENBRENNER. Will the gentleman yield further?

Mr. PERKINS. I will be happy to yield to the gentleman again.

Mr. SENSENBRENNER. That there is a basic lack of confidence over the ability of the several States, which after all do have the primary responsibility over the education in this country to respond to the problem of the retention and the obtaining of math and science teachers.

I think we ought to put the responsibility at that level of government that has administered education in this country for the last 206 years and that is the State and local governments; not be creating another Washington program that dissipates 50 million dollars, worth of scholarship money throughout the country. Now, if your $50 million program is adequate and mine is inadequate, I would certainly like to understand why.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. Let me first state, Mr. Chairman, that we have targeted through our legislation every section of the country, not just any one section, but the entire Nation.

Under the scholarship section, nominations are received from every congressional district in the Nation, times 20 the number of Congressmen that we have in this House here.

So, I would hope that we would go along and do something that is worthwhile instead of prancing around in the Chamber and doing nothing, which this amendment does.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. Mr. Chairman, I yield to the gentleman from Illinois, again.

Mr. SIMON. I thank the gentleman.

I agree with the Chairman. It is not a lack of confidence in the States; it is a question of whether the gentleman's amendment effectively does anything and whether this body should, for the first time, get into this area of subsidizing teacher salaries. Up to this point we have not done that. The gentleman from Wisconsin suggests we break precedent. Maybe we should, but we ought to do it after very, very careful study, not with an amendment that arbitrarily does it as here.

Mr. PERKINS. I agree with the gentleman.

Mr. GOODLING. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, first of all, I would like to say that I am not quite sure what my colleague is doing with his amendment that is different than what we permit in part A of the bill. I am not sure that you are not duplicating in part B what we are allowing in part A.

In the part A State-operated programs, there is a provision for an incentive bonus grant that permits the State to do most of the things that the gentleman is talking about. Now, they must spend a minimum of 20 percent of that total that they get for those purposes. They could really spend the total, 100 percent, which would be $60 million. So, I am not sure that we do not allow, in most instances, in part A to do what the gentleman is suggesting we do in part B.

Let me further say that I agree with many of the people who have talked about one of the problems we had with retaining good math and science teachers. But let us not at this particular time, without any consideration as to what the ramifications are as to how we would handle that situation, do it in this particular piece of legislation.

I would think that we would need hours and hours of testimony and then research on just how you do that kind of thing. This is not anything new. School districts have been wrestling with this problem, States have been wrestling with this problem for years. It is nothing new. But I think we need to come up with some concrete answer as to how you attack that problem and, above all, what role the Federal Government plays in this whole area of teacher retention.

I was asked in the Rules Committee yesterday and was flabbergasted—that is a York County Dutch term—to hear an inquiry from my side of the aisle regarding the amount of money in the bill for local school districts to hire these teachers. And I could not believe that that came from my side of the aisle. So, I think we have to be careful when we start adding amendments that we have not given careful thought to, at least our committee has not. Again, I would only say that I think there is a possibility that you are duplicating in part B what we already are authorizing in part A.

Mr. FUQUA. Mr. Chairman, I move to strike the requisite number of words and rise in opposition to the gentleman's amendment.

Mr. Chairman, I certainly appreciate the efforts that the gentleman from Wisconsin who is a very valued member of our committee, is proposing. He has been on our committee for several years. I am sure he is aware of the fine work that the National Science Foundation performs. I appreciate that confidence because what it appears to me from looking at the amendment is that he, in effect, is transferring what has historically been within the Department of Education, transferring that into the National Science Foundation for these programs.

This amendment involves formula grants that the National Science Foundation has never been involved in before. All of its grants are competitive grants based on merit and peer review. And it is changing somewhat, even the role of the National Science Foundation that is not contained in the original Organic Act of that agency.

So, I think the gentleman from Pennsylvania pointed out very eloquently, that it is doing, attempting to do what is already I think carried out in other parts of the act. But I do have some concern about one part of his amendment that relates to how these grants would be spent and that it would include salary bonuses and summer employment and scholarships.

I do not know exactly what the salary bonuses would be. That is an area that I think should include local funds rather than Federal funds. Summer employment, I am not sure what summer employment is including.

□ 1530

We have summer institutes where people are reimbursed for going to school to try to improve their skills and their teaching abilities; but I do not know what summer employment would be and what type of scholarships they would be. Would there be scholarships for other than science and math? I think it would be science and math, but I am not sure from the reading of the amendment.

I think it would be something that should be considered more carefully and I would urge my colleagues to vote against the amendment.

It also appears that the $20 million that is currently in the bill for part B where this is expanded to $50 million, so it is expanded by an additional $30 million. that may not be the case, but it is what appears to me in a quick reading of the bill.

So I would urge my colleagues under the circumstances to reject the amendment and keep the language that we have in the bill. It has been carefully thought out in hearings, not only this year, but last year. I think it tries to do the same thing that the gentleman from Wisconsin is attempting to do.

Mr. BARTLETT. Mr. Chairman, I move to strike the requisite number of words. I rise to speak in favor of the amendment.

Mr. Chairman, I would call the attention of this body to really come back to the purpose and the exact language and the results of passing this amendment.

In the first place, just by way of clarification for my colleagues, this amendment would, in fact, take that extra $30 million out of title II of the bill. That would have to be made as a separate amendment later and I would assume that would be done, assuming this passes.

What this amendment does, it focuses on the very precise problem and that is the problem of the shortage of math and science teachers in the classroom, a problem which is getting worse, not better. What this amendment would do would be to allow and to give the tools to school districts to be able to recruit and train new teachers and to retain those existing teachers.

This amendment instead of diluting our efforts would target a greater share of limited resources toward that exact need. The bill presently spends 4 percent of the total expenditures for scholarships and this would increase it to 11 percent.

This amendment would also give States and school districts some flexibility in deciding how that would be done within the broad purview of scholarships, of retention and of training. It would put the decisions out of the halls of Congress on teacher retention and training and into the school districts and the States where they belong and then the scholarships would more to the point take the existing scholarship model which is in the bill and take it out of the hands of the Washington-dispensed scholarships of $20 million and put it directly to the States where the States and the school boards can tie those scholarships if they choose to the recipients and to their own needs and thus the school boards would find ways to make an investment in their teachers instead of spending. In terms of the total dollar size of $50 million, if $5,000 average were spent in training or in the recruiting or in retaining a teacher, that would add immediately 10,000 new teachers in September of 1985.

So I would urge this body to seriously consider the merits of this amendment.

Mr. McCURDY. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in strong opposition to this amendment. As the author of a separate bill regarding forgiveable loans, scholarships, whatever appropriate word you want to use, and there was considerable debate in both the Science and Technology Committee and the Education and Labor Committee and we decided upon the term scholarships; but they do have a tie, there is a commitment involved. Any recipient under this program would have a commitment to teach in the State, in the school district, in science and math education 2 years for each year that he or she received a scholarship.

There are provisions within this and I think that the amended version, if the gentleman will peruse those sections carefully, are much better than the original bill. I think they have gone a long way to address some of the concerns.

The gentleman raises a number of good points and I think they are well taken; however, I would respectfully point out to the gentleman from Wisconsin and also to the gentleman from Texas that this is not "a Washington-based" scholarship. This is not a political fund that is established by Members of Congress to dole out in their districts.

The language on page 42, line 14, indicates as follows:

"(b) Each chief State school officer or appropriate State officer responsible for postsecondary education may provide to the Secretary of Education the names and qualifications of a number of individuals who are qualified to receive national teaching incentive scholarships which does not exceed the product of the number of Members of Congress from that State, multiplied by twenty.

What it does is allow the State superintendent to nominate to a committee based on merit the number of people that are qualified, that have expressed an intention to teach math and science in our schools.

Again, this is not a Washington boondoggle. This is a program that has been well thought out.

I might also mention that we discussed in the committee the possibility of a committee at the State level, but when you do that, all you are doing is adding another layer.

We are trying to avoid the establishment of more and more bureaucracies. We are trying to enlist the existing institutions, such as the Department of Education, which is far better qualified for supervising a loan or scholarship program than is the National Science Foundation; but at the same time requiring the National Science Foundation to provide technical support in this area.

I think the amendment is unfounded. I think, although I am sure it is well intended, it does not address to the critical need of attracting qualified people to teach math and science in the schools.

Mr. COLEMAN of Missouri. Mr. Chairman, will the gentleman yield?

Mr. McCURDY. I am glad to yield to the gentleman from Missouri.

Mr. COLEMAN of Missouri. I thank the gentleman from Oklahoma.

If there are people here who are concerned about the Washington-based portion of the gentleman's argument, I have an amendment which would disperse this back to the States without the problems that the amendment of the gentleman from Wisconsin has.

While the gentleman was talking about the formula, if you will, on dispensing these various scholarships, I think that is part of the problem of

the Fuqua substitute that I will address in my amendment.

It is not necessarily the case just because a congressional delegation is reflective of the population that that, in fact, reflects the population of students between the first grade and seniors in high school. That is part I think of the problem of the Fuqua amendment: The distribution problem based on total population, not student population.

It is conceivable, for example, for in a State which has a very high elderly population, there would be fewer people involved with participating on the educational levels, whereas other States might have just the opposite. Just because we have one-man one-vote does not necessarily reflect that down into the high school and grade school levels.

Mr. McCURDY. If I might reclaim my time, I appreciate the gentleman's comments; but I think that the fair distribution of these funds is very important and one of the measures adopted in this is providing a floor to encourage students to enter into this profession and it addresses primarily those concerns of tuition and fees that perhaps from a more rural school or a school such as a State school in Missouri whose tuition and fees are not as expensive as MIT or Stanford and that this scholarship program would address this in a more equal manner.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin (Mr. SENSENBRENNER) to the Science and Technology Committee amendment.

The question was taken; and the Chairman announced that the noes appeared to have it.

Mr. SENSENBRENNER. Mr. Chairman, I demand a recorded vote, and pending that, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. Thirty-two Members are present, not a quorum.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to clause 2, rule XXIII, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

RECORDED VOTE

The CHAIRMAN. The pending business is the demand of the gentleman from Wisconsin (Mr. SENSENBRENNER) for a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 92, noes 323, not voting 18, as follows:

□ 1610

The Clerk announced the following pair:

On this vote:

Mr. McDonald for, with Mr. Rahall against.

Mr. MACKAY, Mrs. BOGGS, and Mr. MICA changed their votes from "aye" to "no."

Mr. KEMP changed his vote from "no" to "aye."

So the amendment to the Science and Technology Committee amendment was rejected.

The result of the vote was announced as above recorded.

Mr. COLEMAN of Missouri. Mr. Chairman, I move to strike the last word.

Mr. WEISS. Mr. Chairman, will the gentleman yield?

Mr. COLEMAN of Missouri. I yield to the gentleman from New York.

Mr. WEISS. Mr. Chairman, I rise in support of H.R. 1310, the Emergency Mathematics and Science Education

Act. The bill authorizes $425 million for the improvement of science, mathematics and foreign language education in our Nation's elementary and secondary schools and institutions of higher learning, and sets a national policy for training and maintaining an adequate supply of qualified scientific and technical personnel.

Without question, the condition of science and mathematics education in our Nation is profoundly unhealthy. Evidence of a dramatic erosion in the ability of our schools to produce technologically competent individuals is abundant and persuasive. Over the last decade the national assessments of educational progress have revealed a dramatic decline in student's scores on tests of science and mathematics achievement. An equally troubling drop in scholastic aptitude test scores in mathematics has occurred over the last 20 years. We cannot expect to maintain a competitive edge in an increasingly technologically oriented world if these trends are not abated.

While the causes of lowered achievement are no doubt many, we cannot but think that the critical shortage of qualified mathematics and science teachers is a significant part of the problem. A recent survey indicated that of 45 States reporting, over 40 were experiencing significant shortages in mathematics and physics teachers. To make matters worse, the numbers of teachers being prepared in teacher education programs has declined by over 60 percent over the last decade.

Given these alarming trends, H.R. 1310 focuses assistance for mathematics and science education where it is most needed. The majority of funds appropriated under the bill are targeted for inservice teacher training to upgrade the skills of mathematics and science teachers and to retrain teachers of other subjects to teach mathematics and science courses. Scholarship funds are also provided to attract highly competent individuals into precollege teaching. By targeting funds in this way, the legislation strikes at the heart of the problem of teacher shortages in a substantive yet cost-effective manner.

H.R. 1310 also appropriately directs the greatest amount of assistance to those elementary and secondary schools with the least amount of financial resources. Poorer school districts are less able to provide the salaries and teaching environments that can lure qualified persons away from lucrative technical professions and into precollege teaching. Thus for a scarcity of competent instruction and guidance a great reservoir of potential scientific talent, our Nation's economically disadvantaged children, remains untapped. We, as a nation, cannot afford this loss.

For the reasons I have outlined and others, H.R. 1310 deserves our support. Enactment of this legislation will not completely remedy the many difficult problems in mathematics and science education, but it will be a significant first step toward a more technologically competitive society. I urge my colleagues to join with me in voting for this critical emergency measure.

Mr. RITTER. Mr. Chairman, will the gentleman yield for a colloquy with the chairman of the Science and Technology Committee?

Mr. COLEMAN of Missouri. I yield to the gentleman from Pennsylvania for the purpose of a colloquy between the gentleman and the chairman of the Committee on Science and Technology.

Mr. RITTER. I thank the gentleman for yielding.

Mr. Chairman, I understand that in section 105 of the bill the National Institute of Education and the National Science Foundation may undertake studies to improve math, science, and foreign language education. The bill states that NIE and NSF may make an analysis of local and institutional policies enhancing or inhibiting the recruitment, retention, and improvement of mathematics, science, and foreign languages faculties.

As my colleague knows, I am interested in whether the use of wage and salary differentials for these teachers could enhance the recruitment and retention of qualified people in this area. As the gentleman reads this bill, does the gentleman feel that this would be one area that would be addressed by such studies?

Mr. FUQUA. If the gentleman will yield, I would certainly think that local and institutional policies, where it talks about the retention and the recruitment, would certainly include the salaries, working conditions, many other things that teachers may have that would impact on whether or not they remained or entered into the field of science and math teaching.

Mr. RITTER. I thank the gentleman.

I personally believe that we should study the wage and salary differentials to determine how effective they can be in resolving the shortage.

In a report prepared for the National Science Teachers Association by James Guthrie, chairman of the School of Education at Berkeley, he noted that money is the root of the shortage, and one of his recommendations in dealing with the problem is to encourage schools to offer higher pay for higher demand fields.

This legislation is certainly a beginning in dealing with the drastic shortages of qualified teachers in this area. However, there are some things that can be done at the State and local levels to address the shortage and wage differentials certainly should not be ignored in our efforts to attract and retain qualified personnel in the teaching profession in the same ways we attempt to attract and retain qualified personnel in every other profession.

Mr. GREEN. Mr. Chairman, will the gentleman yield?

Mr. COLEMAN of Missouri. I yield to the gentleman from New York.

Mr. GREEN. Mr. Chairman, I would now like to engage in a colloguy with the distinguished chairman of the Science and Technology Committee.

Mr. Chairman, I am concerned that, in the course of my studies of this problem, as ranking minority member of the HUD-Independent Agencies Appropriations Subcommittee, with responsibility for the National Science Foundation, it has become clear to me that the problem with respect to computer science teaching at the university level is very similar to that which is identified with respect to engineering instruction in the discussion of this bill. I would hope that either by being included within the sphere of engineering or by being included in the priority that you noted regarding the importance of computer education, computer sciences would be included in the bill as a priority area.

□ 1620

Mr. FUQUA. In section 206 of the bill, the priorities, it states in subsection 3 of section 205 the technical engineering——

The CHAIRMAN. The time of the gentleman from Missouri (Mr. COLEMAN) has expired.

(At the request of Mr. GREEN and by unanimous consent Mr. COLEMAN of Missouri was allowed to proceed for 3 additional minutes.)

Mr. FUQUA. If the gentleman will continue to yield, we specify in the bill that there will be special emphasis on computer accessibility. On page 39 of the committee report I quote:

> The committee finds that there is a serious gap in higher education between the computing needs of faculty and students and the resources available. The committee believes that significant revamping of existing facilities, networks, curriculum development, et cetera, is required to support growth and change necessary to accommodate students who need and want to learn to use computers.

So we certainly do share the concerns of my good friend from New York and feel as though this adequately takes care of those concerns.

Mr. GREEN. And that would include a priority for faculty in the computer science field?

Mr. FUQUA. The gentleman is certainly correct, it does.

Mr. GREEN. I thank the gentleman for his assurance and thank the gentleman from Missouri.

AMENDMENT OFFERED BY MR. SIMON TO THE SCIENCE AND TECHNOLOGY COMMITTEE AMENDMENT

Mr. SIMON. Mr. Chairman, I offer an amendment to the Science and Technology Committee amendment.

The Clerk read as follows:

Amendment offered by Mr. SIMON to the Science and Technology Committee Amendment: Page 53, line 21, redesignate subsection (b) as subsection (c) and insert before such line the following new subsection:

(b) The Director of the National Science Foundation shall make available to the Director of the National Institute of Education, for purposes of this section, one-half of the funds appropriated pursuant to section 106(3) of this Act for any fiscal year. Such funds shall be made available under the authority granted to the Director of the National Institute of Education in section 405(i) of the General Education Provisions Act.

Page 54, beginning on line 3, strike out all of section 106 through line 16.

Page 54, line 18, redesignate section 107 as section 106, and on page 55, line 1, strike out "$30,000,000" and insert in lieu thereof "$35,000,000".

Page 55, line 3, strike out "one-half" and insert in lieu thereof "three-sevenths", on line 6, strike out "one-third" and insert in lieu thereof "two-sevenths", and on line 8, strike out "one-sixth" and insert in lieu thereof "two-sevenths".

Mr. SIMON (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. SIMON. Mr. Chairman, I will try not to take 5 minutes. I believe this is a noncontroversial amendment. This is the amendment I indicated in committee would be drafted and offered.

This amendment takes the minority institutions science improvement program, which is a separate statute, and leaves it separately. It was included here, frankly, just to pull all science programs together. We can include it in our Higher Education Reauthorization Act later. It takes that $5 million there and puts it into research at NIE.

Mr. GOODLING. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I yield to my good friend from Pennsylvania.

Mr. GOODLING. I would say to my good friend that I find a possibility here that this could be a very controversial amendment in that if I understand what the gentleman is doing, he would eliminate MISIP from this bill?

Mr. SIMON. That is correct.

Mr. GOODLING. However, MISIP expires in 1984 and therefore will have to be reauthorized. The administration supports it, everybody probably will support it, which means that what you have done, in my estimation, is essentially added another $5 million to the budget.

Mr. SIMON. The gentleman is technically correct. But what we do not add is any money to the authorization on this bill.

Mr. GOODLING. If the gentleman will yield again, I agree with what he is saying technically. We already have $5 million in here. What you would do is to push the $5 million that is in there for MISIP into that category which makes it $10 million, and then later on, during this session, just so everyone understands, they will then ask us to come up with the $5 million from MISIP that we are now removing from this part of the budget.

So it is a $5 million addition essentially in our budget.

Mr. SIMON. In a sense; that would be up to the Appropriations Committee.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. SIMON) to the Science and Technology Committee amendment.

The question was taken; and the Chairman being in doubt, the Committee divided, and there were—ayes 28, noes 43.

So the amendment to the Science and Technology Committee amendment was rejected.

AMENDMENT OFFERED BY MR. COLEMAN OF MISSOURI TO THE SCIENCE AND TECHNOLOGY COMMITTEE AMENDMENT

Mr. COLEMAN of Missouri. Mr. Chairman, I offer an amendment to the Science and Technology Committee amendment.

The Clerk read as follows:

Amendment offered by Mr. COLEMAN of Missouri to the Science and Technology Committee amendment: Page 40, beginning on line 1, strike out all of part B through line 6 on page 46 and insert in lieu thereof the following:

"PART B—SCIENCE AND MATHEMATICS TEACHER DEVELOPMENT

"PURPOSE

"SEC. 621. The purpose of this part is to improve the quality of science and mathematics instruction in the United States by helping States and localities meet the critical need for additional qualified science and mathematics teachers at the elementary and secondary level, particularly in areas where there is a shortage of such teachers, and by making it possible for States and localities to increase science or mathematics enrollments or graduation requirements at the elementary and secondary level.

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 622. For the purpose of carrying out this part there are authorized to be appropriated $20,000,000 for each of fiscal years 1984 and 1985.

"STATE ALLOTMENTS

"SEC. 623. (a) From the funds appropriated under section 622 for any fiscal year, the Secretary may reserve not more than one per centum for grants to the insular areas. The Secretary shall apportion the amount reserved for the insular areas according to their respective needs for assistance.

"(b) From the remainder, the Secretary shall allot to each State (excluding the insular areas) an amount which bears the same ratio to that remainder as the number of persons aged five through seventeen, inclusive, residing in the State bears to the number of persons in all the States (excluding the insular areas).

"(c)(1) The Secretary may reallot all or a portion of a State's allotment for any fiscal year if the State does not submit a proposed use report under section 624, or informs the Secretary that it does not need the full amount of its allotment for that fiscal year. The Secretary may fix one or more dates during a fiscal year upon which to make reallotments.

"(2) The Secretary may reallot funds to one or more States that have a current need for additional funds under this part. Any funds reallotted to another State shall be deemed not to be part of its regular allotment for the fiscal year in which it receives the reallotted funds.

"(d) For purposes of determining allotments under this section, the population aged five through seventeen, inclusive, residence in any State shall be based on the latest data that are satisfactory to the Secretary.

"(e)(1) The Secretary shall allot to each Indian tribe, which submits a proposed use report that meets the requirements of section 624, an amount which bears the same ratio to the allotment of the State or States in which the tribe is located as the number of members of the Indian tribe aged five through seventeen, inclusive, residing in that State or States bears to the number of persons aged five through seventeen, inclusive, residing in the State or States.

"(2) The Secretary shall reduce the amount allotted to a State or States under subsection (b) by the amount alloted to an Indian tribe under paragraph (1).

"(3) For purposes of this subsection, the term 'Indian tribe' means any Indian tribe, band, nation, or other organized group or community, including any Alaska Native village, which is recognized by the Secretary of the Interior as having special rights and responsibilities, and is recognized as eligible for the unique services provided by the Division of Indian Affairs to Indians because of their status as Indians.

"PROPOSED USE REPORT

"SEC. 624. (a) Any State desiring to receive a grant authorized by this part during any fiscal year shall submit to the Secretary an annual proposed use report which describes how the funds under this part will be used. The proposed use report must—

"(1) describe—

"(A) how the State's program will achieve the purposes of this part, as well as the State's specific goals;

"(B)(i) how the funds awarded under this part will be used by the State; or

"(ii) to the extent the State will not operate the program directly, how funds will be distributed to local educational agencies; and

"(C) how the State will provide elementary and secondary level students attending private schools equitable opportunities to benefit from the State's program; and

"(2) contain assurances that the State will—

"(A) provide for such methods of administration as are necessary for the proper and efficient administration of programs under this part;

"(B) provide for such fiscal control and fund accounting procedures as are necessary to ensure proper disbursement and use of Federal funds paid to the State; and

"(C) maintain continuing public administrative direction and control over funds used to benefit students attending private schools.

"(b) Each proposed use report (after the first) must contain an assessment of the success of the State's program during the preceding year, including an assessment of the extent to which the State met the purposes of this part as well as the specific goals it established for that preceding year.

"(c) Prior to submitting the proposed use report to the Secretary the State shall make it public in a manner that facilitates comment from interested agencies, groups, and individuals.

"GENERAL EDUCATION PROVISIONS

"SEC. 625. Only the following sections of the General Education Provisions Act shall apply to programs and activities conducted under this part: sections 412(a) and (b), 415, 416, 417, 420, 442(a)(1) and (2), 426(a), 431, 432, 437, 438, 439, 440, 451, 452, 454, 455, and 456.

"AUDITS

"SEC. 626. Each State shall provide for independent financial and compliance audits of all programs and activities supported with Federal funds awarded under this part. These audits shall be conducted at least every two years and in accordance with standards prescribed by the Comptroller General. Reports of those audits shall be available to the public.

"USE OF FUNDS

"SEC. 627. (a) The State shall use its grant, either directly or through local educational agencies, to increase the number of teachers who are qualified to teach science or mathematics at the elementary and secondary level in public or private schools, by awarding scholarships which will enable the recipients to receive necessary instruction at institutions of higher education.

"(b)(1) For each scholarship recipient a State may use funds under this part to pay a portion of the total amount of the scholarship (including tuition and stipend) provided to the recipients to enable the recipient to acquire the necessary qualifications to teach science or mathematics at the elementary and secondary level.

"(2) A State may not use funds under this part to provide instruction to a scholarship recipient for more than one period of twelve consecutive months or to pay more than $5,000 toward the total amount of the scholarship.

"SCHOLARSHIP RECIPIENTS

"SEC. 628. (a) A State may select as a scholarship recipient only a person who at the time the scholarship is awarded—

"(1) has at least a bachelor's degree; and

"(2) lacks the qualifications to teach science or mathematics at the elementary and secondary level in public or private schools in that State, but can become qualified within one year.

"(b) A State or local educational agency (unless the State determines otherwise) shall condition selection as a scholarship recipient upon that person's agreement to teach science or mathematics at the elementary and secondary level for at least two years in a public or private school determined by the State or the local educational agency to have a need for such a teacher. Each recipient of a scholarship shall be obligated for at least two years or to repay the total amount of the scholarship, plus interest at a rate prescribed by the Secretary.

"(c) A State may require a local educational agency or private school at which a scholarship recipient will teach to contribute a portion of the total amount of the scholarship (including tuition and stipend).

"(d) Nothing in this part shall be construed to require a scholarship recipient to become certified under State law.

"PARTICIPATION OF TEACHERS IN PRIVATE ELEMENTARY AND SECONDARY SCHOOLS

"SEC. 629. The requirements of subsections (b) and (c) of section 608 of this title shall apply to funds made available under this part.

"DEFINITIONS

"SEC. 630. As used in this part—

"(1) The term 'State' includes, in addition to the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Northern Mariana Islands, and the Trust Territory of the Pacific Islands.

"(2) The term 'elementary and secondary level' means grades one through twelve.

"(3) The term 'science' means the natural sciences.

"(4) The term 'mathematics' means all branches of mathematics, including computer science.

"(5) The term 'local educational agency' means—

"(A) a public board of education or other public authority legally constituted within a State for either administrative control of or direction of, or to perform service functions for, public elementary or secondary schools in—

"(i) a city, county, township, school district, or other political subdivision of a State; or

"(ii) such combination of school districts or counties a State recognizes as an administrative agency for its public elementary or secondary schools; or

"(B) any other public institution or agency that has administrative control and direction of a public elementary or secondary school.

"(6) The term 'insular area' means Guam, American Samoa, the Virgin Islands, the Northern Mariana Islands, and the Trust Territory of the Pacific Islands.

"(7) The term 'institution of higher education' means an institution of higher education as defined by section 1201 of the Higher Education Act of 1965, as amended.

"(8) The term 'school or department of divinity' means an institution or component of an institution whose program is specifically for the education of students to prepare them to enter into a religious vocation or prepare them to teach theological subjects.

"EFFECTIVE DATE AND EXPIRATION DATE

"SEC. 631. This part shall take effect on October 1, 1983, and shall expire on October 1, 1985."

Mr. COLEMAN of Missouri (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri?

Mr. FUQUA. Mr. Chairman, reserving the right to object, and I shall not object, I do not have a copy of the amendment and I would like to reserve a point of order against the amendment.

Mr. COLEMAN of Missouri. Mr. Chairman, we supplied one of the desks with an amendment, and I would hope both desks were supplied. Let us get the amendment over there.

Mr. FUQUA. Mr. Chairman, is my point of order reserved?

The CHAIRMAN. The gentleman's point of order is reserved.

Mr. FUQUA. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. COLEMAN of Missouri. Mr. Chairman, this amendment replaces the existing national teaching scholarship program which is in the Fuqua amendment with a program based upon the administration's initiative called the Math and Science Teacher Development Act.

But, Mr. Chairman, this amendment is broader than the administration's proposal because it encompasses not just the secondary but also elmentary teachers for training under this scholarship section. There should be no confusion that this is the orignial administration proposal. It is not. It is broader and more expanded.

This amendment only touches one section of the bill; that is, section 622, and its does not affect any other part or program in this legislation.

This amendment would provide scholarships to States to fund scholarships up to $5,000 a year to persons who can become qualified to teach math or science within a 1-year period.

In other words, this is the block grant to the States, and the States, in turn, determine how and where they want to spend this money.

The qualifications to get one of these scholarships are as follows: You must have a bachelor's degree, and you cannot be qualified to teach math or science in school at the present time but you could become eligible within 1 year. In other words, we are trying to get the teachers who are nonmath and science teachers, who have already received their educational training and their classroom experience, to go out and learn how to teach math and science.

In both cases, for those people who are teachers now that do not teach math or science and those that are not qualified to teach math and science, they would have to become qualified within 1 year of the date of the scholarship. Other people who are out in industry or any place else who can come in and get the basics of education so that they can go into the classrooms to teach math or science would also be eligible.

This proposal would permit the States and local school districts under the States' direction to select recipients that administer the program. No more Washington-based bureaucracy as we have heard about before.

The receipt of the scholarship would be contingent upon an agreement by the individual recipient to enter into an agreement to teach for two years after receiving the scholarship.

To receive the $5,000 scholarship there would be a commitment to teach for 2 years, and if the person did not teach for 2 years he would have to pay the scholarship back in full.

This proposal would send the money to the States on a formula based on the elementary and secondary school age population according to that State.

We have heard about the distribution formula under the present bill. The present bill does not take into consideration where the young people of the country might be residing.

□ 1630

It simply says divide the money by the number of Congressmen in each State delegation. That may not be accurately reflective of the people we are trying to reach, those students in grade schools and high schools of this country, not just the general population. This is a very important difference, I think. My amendment does not take any money away from the school scholarship program. It is funded at the full $20 million. We have estimated that 4,000 scholarships will be awarded under this program. This means that teachers will be reaching that classroom, teaching math and science within 1 year.

Now, if we are serious about a national emergency and if we are putting this bill on a fast track, why are we doing it, because under the proposal that is pending it could take 2 or 3 years before we see any manifestations of what we do here today. Under my amendment there would be new teachers in the classroom teaching math and science within 12 months. The gentleman from Florida's amendment goes to scholarships to students who can be juniors in college, who will graduate in 2 years, maybe go on for post graduate work and eventually come into the classroom, 3, 4, 5, 6 years down the line. So, I suggest that if you want to get moving fast, if you want to react to this crisis that we have heard about, that we not go with the slow version, but we go with the fast version. And we get these people out teaching math and science immediately within 12 months.

Mr. PERKINS. Will the gentleman yield?

Mr. COLEMAN of Missouri. I would be more than glad to yield to the chairman.

Mr. PERKINS. I just want to say that the amendment knocks out the $20 million altogether that is in our bill and proposes to block grant it to the States.

Mr. COLEMAN of Missouri. We do, Mr. Chairman, have $20 million, the same $20 million that the chairman has, but the emphasis is different. His emphasis is on undergraduates to try to get them to go into math and science. We say it is so critical that we need new teachers out there within 1 year, not 3 or 4 years. What we are trying to do is reach those teachers who have already been trained as teachers but not in math and science, to go out and get these scholarships, return to the classrooms and be able to start teaching youngsters within 1 year.

Mr. PERKINS. Would the gentleman yield?

Mr. COLEMAN of Missouri. I would be happy to yield to the gentleman.

Mr. PERKINS. I do not feel that the gentleman's bill has the incentive that our bill has. I personally feel, and I think all the witnesses who came before the committee agreed, that we should include juniors and seniors in the scholarship program. Here the gentleman is tearing that down and saying no. I think the gentleman's bill will be a tremendous handicap in the development of science and math teachers. I feel that we should stand with the committee bill, where we provide a limited amount of money adequate to provide some 5,000 full scholarships in 1984 for undergraduates and graduate students.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

(By unanimous consent, Mr. COLEMAN of Missouri was allowed to proceed for 2 additional minutes.)

Mr. COLEMAN of Missouri. I think the gentleman is absoutely right in portraying the committee bill. I think that is part of the problem. If we have a national emergency, let us not talk about 3 or 4 years down the road when these juniors that you want to give scholarships to are graduated. If we look at this as a crisis, this certainly is a fast-track piece of legislation. It went through both committees in rather rapid order, and we have to confront the issue head on. That is, are we going to have somebody in these classrooms that are not there today in 12 months from the date of the enactment or are we going to have them come in 4 years from the date of enactment of this bill?

Mr. GOODLING. Will the gentleman yield?

Mr. COLEMAN of Missouri. I will be happy to yield to the gentleman.

Mr. GOODLING. I thank the gentleman for yielding. As the gentleman from Illinois knows, we have had some discussions on this issue and I too feel that the scholarship program should have been designed for those who have already received their bachelor's degree. Therefore, I think the approach that the gentleman is suggesting makes sense.

Mr. COLEMAN of Missouri. I might say too that the administration's original proposal was inadequate, I thought, because it did not deal with elementary teachers. I think it should. This amendment does that.

Mr. WALKER. Will the gentleman yield?

Mr. COLEMAN of Missouri. I would be happy to yield to the gentleman from Pennsylvania.

Mr. WALKER. I thank the gentleman.

As I understand it we have a shortage of approximately 20,000 teachers, give or take some, we have approximately that kind of shortage. Can the gentleman tell me how many teachers we might have that are certified that we could utilize his approach to get into the classrooms and fill those positions?

Mr. COLEMAN of Missouri. We could eliminate 4,000 of those shortages by this bill in 12 months. Four thousand of those scholarship recipients could go into the classroom and teach under this amendment.

Mr. WALKER. Would the gentleman yield further?

Mr. COLEMAN of Missouri. I yield.

Mr. WALKER. His amendment we could take care of 20 percent of the whole problem in 1 year rather than spreading this out over a long period of time as the committee's bill intends to do?

Mr. COLEMAN of Missouri. That is right.

Mr. WALKER. And perhaps 5 years out create those same 4,000?

Mr. COLEMAN of Missouri. That is right. And I imagine we would get farther and farther behind each year you wait for these juniors to go out and graduate.

The CHAIRMAN. The time of the gentleman has expired.

Does the gentleman from Florida insist on his point of order?

Mr. FUQUA. Mr. Chairman, I withdraw my point of order.

Mr. PERKINS. Mr. Chairman, I move to strike the requisite number of words.

Let me say, Mr. Chairman, that this is not a fast track amendment; this is a backward amendment that will really destroy the incentive for math and science teachers.

Now, the testimony was that it would take longer than 1 year to retrain teachers. A scholarship of only $5,000 is not going to get a teacher to leave teaching for 1 year and go to school. I think all of us know that.

I, one day, was a classroom teacher myself and many of you people were. That is just no incentive. The $20 mil-

lion that the gentleman talks about spread out among the States and territories would mean some States would receive only $25,000 and $50,000; hardly enough to do anything.

We have here a good scholarship program in this bill. But here this amendment is limited to those persons who can become qualified to teach math and science within 1 year. And that just will not work. It is going to take a longer period of time and why tie this down with an amendment which in one sense will kill the bill, kill the effectiveness of the bill. The pool of such individuals is not large and the proposal offers no longer term incentives for students to pursue teaching courses.

The bill already sets aside up to 30 percent of the scholarship money for people who are already in the teaching profession. And scholarships under this amendment will just not work; whereas in our bill we provide $5,000 full scholarships in 1984 for undergraduate and graduate students who intend to become math and science teachers, and $10,000 in 1985; 30 percent of scholarships are set aside for current teachers who want to go back to college. The recipient must spend 2 years as a teacher for each year of scholarship.

The selection of these teachers who receive these scholarships is on merit and as has been described here today, they will be selected from throughout the entire Nation. The gentleman offers an amendment here, I reckon it is based on population, which could mean anything.

The greatest incentive that we have is in this bill to develop science and math teachers in this Nation. And anybody who has had any experience with education over a period of years knows that this amendment will destroy the incentive.

Mr. SIMON. Will the gentleman yield?

Mr. PERKINS. I yield to the gentleman.

Mr. SIMON. I thank the chairman for yielding.

I concur with his opinion. I know the gentleman from Missouri recalls that I agreed to accept his amendment with a 30-percent provision so that we do take into account this kind of a need. But we do not toss out every student in college from a scholarship as he does. We agreed, as a compromise out of respect to my friend from Pennsylvania (Mr. GOODLING) to start as juniors in college and not before, and convinced my friends and colleagues on the Science and Technology Committee to agree that eligibility be restricted to juniors in college and above.

□ 1640

But we cannot pretend that we are going to solve this problem overnight and not develop these teachers in the future.

Mr. PERKINS. And retrain these teachers within a year, it is not going to happen.

Mr. SIMON. If the gentleman from Kentucky will yield further, the summer institutes help to provide something here.

The gentleman ignores one area that he knows I am interested in, he knows that the scientists who testified are interested in, and that is the foreign language area.

Finally, the geography question is not quite the political thing that the gentleman from Missouri suggests. One of the reasons for geography in our bill and that you are nominated, so that is a scattering, because in fact we have certain areas where there is no shortage of science and math teachers, but we have central city areas and rural poor areas, like that of the gentleman from Kentucky and mine in southern Illinois, where we do have a problem.

Our bill assures some geographical representation. The amendment of the gentleman from Missouri does not and every indication is that the proximity of where you go to school and where you lived before has a relationship to where you teach.

Mr. WALKER. Mr. Chairman, I move to strike the requisite number of words.

I would like to ask the gentleman from Missouri a question first and then I would be glad to listen to what response he might have to the chairman of the Education and Labor Committee.

Is it not true that across the Nation there are many, many communities that actually have a teacher surplus? I know in my community we have people who are trained teachers who have found themselves having to take jobs working at hamburger stands, who are part-time clothing store clerks, who are taking a lot of jobs because there are not sufficient teaching jobs available.

Am I correct that what the amendment of the gentleman would do is permit those people to go get certification in math and science and allow them to go in and take math and science slots in the school districts that would be open to them? Is that correct?

Mr. COLEMAN of Missouri. If the gentleman will yield, that is absolutely right. These people have already received their educational classroom training. We want to turn those teachers who cannot find a job and are now hamburger flippers into math and science teachers, so we can gain that competitive edge.

The gentleman knows, for example, that there are some people who may be certified to teach general science, as it is called, who maybe within 1 year or 6 months could become chemistry or physics teachers, the very people that we need in the classrooms.

Mr. Chairman, will the gentleman yield further?

Mr. WALKER. I would be glad to yield further.

Mr. COLEMAN of Missouri. How could anybody on the floor of this House argue with a distribution system that, "Puts the money out there where the students are." That is exactly what my amendment does.

I have heard all kinds of reasons why we should not send the money where the students are. I do not believe what I am hearing, that we ought to scatter it around. It does not make sense that we are going to spread it around where maybe it is not needed in some cases, any more than we should spread around heating assistance to Hawaii. We want to spread it around where the students are and where the shortages are and the States will make these decisions.

Now, I respect the opinion of my chairman, but I cannot remain silent when he suggests that I am trying to kill the bill. I am trying to strengthen the bill, as the gentleman well knows.

In fact, if the teacher scholarships were so bad, why is it that the gentleman from Illinois agreed to increase the present participation of the bill to 30 percent?

Originally it was 10 percent of these funds that would go to reteaching teachers, if you will, to go into the classrooms. That is up to 30 percent now because of the gentleman's agreement and I respect and I thank the gentleman for his agreement; but if it was so bad, why would we have 10 percent in the first place and why would we agree to 30 percent in the second place?

It is not bad. It is good. It is the rational approach. It is the short-term approach to knocking out a very difficult problem facing this country.

I could say that we could sit around here and fiddle for 4 years. We are not going to regain the edge over Japan or Germany or anywhere else until we get serious about putting this on the fast track. This is a fast track amendment. It is a positive amendment.

Mr. WALKER. Mr. Chairman, I thank the gentleman for his explanation.

I think that it is well to point out that we pass a lot of things through this House that we label as emergencies in order to try to put them on a fast track through here and get them done.

We truly have an emergency in this area. The question is how are we going to deal with the emergency? Are we going to deal with the emergency 1 year from now or are we going to deal with it 5 years from now?

Congress loves to deal with things 5 years out, because then you create a 5-year funding stream rather than a 1-year funding stream.

That is why it seems to me that what we are doing in this bill, the gentleman is attempting to correct. We can take the money and make certain that what we do is get some real results within 1 year. If it is a real emergency, if that is what we are dealing with, that is what we should all be about and I think the gentleman's amendment really does push us in the right direction.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. WALKER. I am very glad to yield to the gentleman from Illinois.

Mr. SIMON. Mr. Chairman, if I could, through the gentleman from Pennsylvania, respond briefly to my good friend and colleague, the gentleman from Missouri. I agreed to the 30 percent because I think this is a possibility, that this can help; but I also believe we have to have a balanced approach and to believe that we can take these English teachers and in 1 year give them enough chemistry or physics and so forth and they are going to all of a sudden in huge numbers become effective chemistry and physics teachers, we are living in a dream world if we think that.

We have a problem. That 30 percent is in the proposal now, but let us have balance and let us recognize that we are going to have a problem 3 years from now and 5 years from now. Let us recognize the future in this bill.

Mr. COLEMAN of Missouri. Mr. Chairman, will the gentleman yield?

Mr. WALKER. I am glad to yield to the gentleman from Missouri.

Mr. COLEMAN of Missouri. Mr. Chairman, this is not the only program in the bill. It is just one area. We have to look at the entire bill. We have other programs. We have summer institutes.

I mean, we can say the same thing about summer institutes. Why on earth send a teacher to a summer institute for just 3 months if he cannot be retrained. Well, I think the teacher can be retrained, I am not against that. I do not touch that. I support that. I am not touching anything else.

We have to look at this bill as an entire package. I think my amendment strengthens the bill and addresses just this one area. It is a change of emphasis. I think we want to go down the same road, but I suggest that we will get there faster this way.

Mr. FUQUA. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, this bill is trying to aim at quality teachers. That is what the whole thrust in this part of the bill is after.

It was approved by both committees, the Education and Labor Committee and the Science and Technology Committee.

As has been pointed out by both the gentleman from Missouri and by the gentleman from Illinois, the bill does set aside 30 percent for this type of an award; but also it limits it to those persons who can become qualified in 1 year, and the pool of those numbers of individuals is very scarce.

I am afraid while attempting on a short-term basis to solve a problem, we are not really looking at the long-term incentives of students who want to pursue teaching careers.

Mr. Chairman, if I might, I would like to quote the language from the committee report on page 31, and it says that it is the committee's intent that these scholarships go only to those who show by their previous academic work to be clearly preparing for a career in elementary and secondary school teaching, though it is not intended that those majoring in science and math but desiring to teach be excluded from consideration. In fact, some effort should be made to bring such students into the teaching profession through these scholarships.

It is also, Mr. Chairman, the committee's intent that the teaching requirements be fulfilled by consecutive years of teaching beginning as soon as possible after the completion of the student's course of academic studies, and it goes on and elaborates further.

Mr. Chairman, I think that this proposal in the bill, while it may have faults, it is a compromise intended to take some of the good points that the gentleman from Missouri is attempting to offer, but also giving balance, as was pointed out by our good colleague from Illinois, and I support that. We have worked very hard to bring this together and I think it is essential that we stick with what we have in the bill because it is aimed at some of these programs.

Twenty million dollars spread around over all the United States is not going to go very far when you send it out in $5,000 scholarships.

We provide in the bill that the tuition and the cost of an education be provided for. That gives a person, Mr. Chairman, an opportunity to go to a school that may be located in their home area or go to one of the State universities or private universities that may be located somewhere. We leave that up to the individual.

□ 1650

But we think it gives a long-term solution to a critical problem that we have now, and with the work that has gone into this bill by both sides of the aisle, I would urge that the amendment be defeated and we continue on with the bill as reported by the committee. I urge the defeat of the amendment.

Mr. McCURDY. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I will not take the full time, and I again want to associate myself with the comments of the distinguished chairmen of both the Committee on Education and Labor and the Committee on Science and Technology because I believe they have addressed the point very eloquently.

The only point that I would like to add, Mr. Chairman, is that of the entire bill, I believe this provision, this section, provides the greatest incentive for those people who are going to come into the profession to teach math and science. This is the one provision that is going to attract those students who are making career decisions to go into this vital area.

We have heard time and time again in the testimony in the committees that industry is eating its own seed corn. It is taking people out of the profession. Until we provide some incentive—and this is the incentive at the college level—we are not going to address that problem and solve it.

In a hearing in my district in Oklahoma last year, the one section that teachers uniformly commented on and addressed was the need for incentive at the college level; that they cannot afford to go into this area, and that they needed the help at the university level. It was universally addressed and supported.

I might also react to a comment that the gentleman made, and this is not derogatory in any way, but we do not need those hamburger flippers; we need people who are concerned about math and science, math and science majors, to go in there into this highly professional sector, and yet a sector that does not get the respect that they truly deserve.

I think this incentive in the bill is good and I would urge my colleagues to stand in strong opposition to this amendment.

Mr. ERLENBORN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, let me point out that the committee bill provides the same $20 million. When my colleague from Florida says this paltry sum of $20 million is not going to do much, their bill provides $20 million.

Yes, it is going to provide scholarships for students or teachers coming out of all of the 50 States, as would the committee bill. So if the gentleman tries to damn this amendment with faint praise, he does the same thing to the committee bill at the same time.

Let me say the big difference is this: The committee bill addresses itself to undergraduate students who already are qualified for Pell grants, for guaranteed student loans, national defense student loans, work-study programs, and it adds on top of that another additional $5,000 per year for 2 years. What it is doing, therefore, is not really addressing the immediate problem of those who already have the training to be teachers but do not have the resources to get qualified in math and science.

I support the amendment offered by the gentleman from Missouri. It is broader than the program recommended by the administration and it does address that very pressing need of math and science teachers at the elementary level as well as the secondary level, and it looks to utilize a resource that we now have.

As has been pointed out, we have a surplus of teachers. We have a dwindling school population. We have many people who are qualified as teachers who cannot teach because they cannot find jobs; but we do not have that very necessary corps of teachers qualified in math and science. We would take this resource, those who are now denied the opportunity of a teaching career that they have already become qualified for, and we use that resource and qualify them in an area where there is a need in the schools and where they can gain employment.

So I hope the amendment would be supported.

Mr. COLEMAN of Missouri. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I would be happy to yield to the gentleman from Missouri.

Mr. COLEMAN of Missouri. I thank the gentleman for yielding.

Mr. Chairman, I think the fundamental difference between the committee provision and my amendment is that a numerical progression will be made under my amendment, because if you train one person to be a qualified math or science teacher, they can turn that individual youngster on to go after it, too, on his own, to a college career in math and science. Instead of going down to the college level to try to encourage people, one good teacher could get 20 or 30 youngsters involved in math and science and all you have expended is $5,000. If you do it their way, you will spend $5,000 times 20 for the same product. That is the difference between the two proposals.

Mr. ERLENBORN. Mr. Chairman, I might reiterate that the committee bill will address itself to students already qualified for Pell grants, for guaranteed student loans, for national defense student loans, and work-study funds. It in no way says that the receipt of this $5,000 under the committee bill would disqualify them for the other aid.

What it may do is just add more money to those we are already investing in, instead of taking those who have the will to teach, have the desire to teach, but do not have the qualifications and could be, within a year, brought into qualification so that they could gain employment teaching math and science.

Mr. McCURDY. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I would be happy to yield to the gentleman from Oklahoma.

Mr. McCURDY. I thank the gentleman for yielding.

Mr. Chairman, I wanted to clarify perhaps what is a misleading impression.

This is not a $5,000 grant. This is based on the need, the tuition and books and the basic costs of attending a university or college, not to fall below $1,000. So it would not be $5,000. Tuition and books at the University of Oklahoma is $750, in that range, so we are not talking about $5,000.

Mr. ERLENBORN. If I may recapture my time from the gentleman, I have not read the bill that thoroughly, but my cursory glance at it shows no needs test in the bill. It did not show any disqualification for one seeking one of these scholarships if they already have a Pell grant, if they already have a guaranteed student loan or a national defense student loan.

The gentleman could correct me if I am wrong, but I did not find that in the bill.

Mr. McCURDY. Mr. Chairman, if the gentleman would yield on that point, these scholarships are based on merit. People that demonstrate ability and want to go into that area, this is an incentive to stay in the profession.

Mr. ERLENBORN. Will the gentleman address the question, though.

Mr. McCURDY. There is language in the report that indicates that need should be addressed, that need is a criteria when the committee makes a selection.

Mr. ERLENBORN. Mr. Chairman, I just cannot resist the opportunity to give a little lesson in writing the law that I think is forgotten.

The CHAIRMAN. The time of the gentleman from Illinois (Mr. ERLENBORN) has expired.

(By unanimous consent, Mr. ERLENBORN was allowed to proceed for 2 additional minutes.)

Mr. ERLENBORN. Mr. Chairman, just because this is so often misunderstood by my colleagues, let me reiterate something that I have to often say in our committee: If the law is unambiguous on its face, we do not even look at the committee report. We do not even look at the floor debate. Only if there is ambiguity in the language of the law does the court have the ability or the authority to look at the committee report or at the floor debate to determine what we meant in the bill.

As far as I am aware, there is no ambiguity here that would cause the courts to look to the committee report.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I am happy to yield to the gentleman from Illinois.

Mr. SIMON. The gentleman is correct in saying that there is no ambiguity because the law says cost of attendance is the maximum amount permitted. So if somebody is receiving a Pell grant or something else, that is taken into consideration.

Mr. ERLENBORN. I ask my colleague, does this say cost of attendance less grants and loans already received? Cost of attendance is a phrase of art.

Mr. SIMON. It certainly is a phrase of art, but the total that is permitted, if you have the book there, on page 52 at the top of the page you will see that the maximum you can receive in total is the cost of attendance.

Mr. ERLENBORN. If I remember correctly, we have even charts that show what the cost of attendance is at each of the institutions, because that is also a factor in determining the eligibility of those who are looking for Pell grants, and so forth.

Mr. SIMON. The gentleman is precisely correct.

Mr. ERLENBORN. But cost of attendance, as far as I am aware, in no case looks to the student's own capacity to pay, nor does it look to what aid they have gotten. Cost of attendance is tuition, fees, the cost of transportation, room and board, and it does not look to these other factors.

The CHAIRMAN. The time of the gentleman from Illinois (Mr. ERLENBORN) has again expired.

(On request of Mr. GOODLING and by unanimous consent, Mr. ERLENBORN was allowed to proceed for 1 additional minute.)

Mr. GOODLING. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I am happy to yield to the gentleman from Pennsylvania.

Mr. GOODLING. I thank the gentleman for yielding.

Mr. Chairman, I take this time only to point out that my concern during our debate on this issue, as the gentleman from Illinois knows, is that we do not know whether someone should be a teacher until after they have done their student teaching.

We do not want to attract people into the teaching field to get their college degree who we might indicate are outstanding math and science students. We have had a lot of those. I have had a lot of those in college.

They are lousy professors and lousy teachers. Whether 30 percent will do the job we want to do for those general science teachers who are out there who cannot get a job, those biology teachers who are out there who cannot get a job, Earth science teachers who are out there and cannot get a job, I am not sure whether 30 percent will be enough. I do not want to do anything to attract people into the field simply because they have math and science talent, because I have had a lot of those. We have dismissed a lot of those in the teaching profession. They are not teachers.

Mr. ERLENBORN. I thank the gentleman.

Mr. Chairman, let me make just one last observation. We have another phrase of art, and that is "remaining need." I do not see that this bill refers to remaining need.

□ 1700

The CHAIRMAN. The time of the gentleman from Illinois (Mr. ERLENBORN) has expired.

(On request of Mr. SIMON, and by unanimous consent, Mr. ERLENBORN was allowed to proceed for 1 additional minute.)

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I am happy to yield to the gentleman from Illinois.

Mr. SIMON. Mr. Chairman, just so there is no misunderstanding and we are not talking about anything that is ambiguous, this is what the bill before us says:

• • • the sum of student assistance received under such title and a national teaching scholarship shall not exceed the cost of attendance (as such term is defined in section 482(d) of such Act).

We are talking about a very precise measured thing.

Mr. ERLENBORN. Yes. Can the gentleman tell me the definition contained in 482(d)? Does it take into account in determining the cost of attendance the amount of funds available to a student in his own capacity?

Mr. SIMON. It does.

Mr. ERLENBORN. It does?

Mr. SIMON. It does.

Mr. ERLENBORN. Mr. Chairman, I am going to have to look at that very closely. I will take the gentleman's word for it, but "remaining need" is the phrase that usually takes into account other resources available to the student rather than " cost of attendance," which has a different connotation.

Mr. SIMON. Mr. Chairman, if the gentleman will yield further, the "remaining need" is a phrase that is used under the guaranteed student loan program, not in this particular area.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Missouri (Mr. COLEMAN) to the Science and Technology Committee amendment.

The question was taken; and on a division (demanded by Mr. COLEMAN of Missouri) there were—ayes 32, noes, 28.

RECORDED VOTE

Mr. PERKINS. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 138, noes 276, not voting 19, as follows:

[ROLL NO. 13]

□ 1710

The Clerk announced the following pair:

On this vote:

Mr. McDonald for, with Mr. Jones of Tennessee against.

Mr. RAY and Mr. KOLTER changed their votes from "Aye" to "No."

Mr. PORTER changed his vote from "No" to "Aye."

So the amendment to the Science and Technology Committee amendment was rejected.

The result of the vote was announced as above recorded.

□ 1720

AMENDMENT OFFERED BY MR. WALKER TO THE SCIENCE AND TECHNOLOGY COMMITTEE AMENDMENT

Mr. WALKER. Mr. Chairman, I offer two amendments to the Science and Technology Committee amendment, and I ask unanimous consent that they be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The Clerk read as follows:

Amendments offered by Mr. WALKER to the Science and Technology Committee amendment: On page 40, line 14, strike "and", and on page 40, line 15, strike the period and add the following: ", and to create a pool of highly qualified new engineering, technical, and scientific personnel which will lead to the creation of a significant number of new jobs in these fields, and will strengthen the Nation's economy.".

On page 24, line 13, after "Personnel" add "and jobs creation".

Mr. WALKER (during the reading). Mr. Chairman, I ask unanimous consent that the amendments be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. WALKER. Mr. Chairman, these amendments are being offered today to emphasize the fact that this bill will be one of the most important pieces of legislation to be reported from our Committee on Science and Technology in this Congress.

At a time when we are struggling to free the Nation from a period of economic malaise brought on by more than 40 years of irresponsible spending by the Government on a whole spectrum of unnecessary, and often meritless Federal programs, the only way to encourage real long-term economic growth will be to create a favorable climate for a true growth in productivity.

This bill is no make-work panacea. It is no quickfix to unemployment. And, most importantly, unlike many other proposals being touted in the Halls of Congress these days, this bill is not a Band-Aid for a growing concern on the economy. But we are talking about jobs. People trained properly in science and mathematics will be more employable in the future.

There is a fundamental problem in America today which this bill addresses. We can no longer claim to be the world leader in many technical fields. We are raising a generation of Americans who are scientifically and technically illiterate. Our scientific and technical capacity has been on a downward trend for a number of years. Unless that trend is dramatically reversed the long-term implications for our economy are frightening.

This bill takes a giant step in the right direction. It will encourage new students in scientific and technical fields and will act to improve both their educational experience and their technical competence.

In doing this we insure a viable technological future for a new generation of Americans. But, equally importantly, we will create a new pool of highly qualified new engineering, technical, and scientific personnel. This will lead to the creation of new jobs in these fields and that is what will lead to long-term economic recovery and economic stability.

The Committee on Science and Technology recognized this fact and agreed with me when I offered amendments in committee to incorporate that recognition in the legislation. Only because of the way this legislation has been brought to the floor some of those amendments have been dropped, inadvertently, I am sure, or could not be offered in committee.

Let us take pride in the fact that this bill will create jobs. Be glad that this bill will pay long-term economic dividends. Agree with me that this approach is an honest jobs bill, not some shameless political sham like we so often see.

Mr. Chairman, I urge the adoption of my amendments.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. WALKER. I am glad to yield to the committee chairman.

Mr. PERKINS. If the amendment has been reported, I would be happy to accept it.

Mr. WALKER. I thank the gentleman for accepting it.

Mr. GOODLING. Mr. Chairman, will the gentleman yield?

Mr. WALKER. I yield to the gentleman from Pennsylvania.

Mr. GOODLING. I would like to accept the amendments also.

Mr. WALKER. I thank the gentleman from Pennsylvania for accepting the amendments.

I would simply say the amendments are aimed at assuring that as we look at this bill we understand that there are 20,000 jobs out there in teaching and that we ought to concentrate the intention of the bill toward filling those 20,000 vacancies; also that we ought to recognize in taking this approach that what we are doing is assuring job creation for the future by training people in science and math.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Pennsylvania (Mr. WALKER) to the Science and Technology Committee amendment.

The amendments to the Science and Technology Committee amendment were agreed to.

AMENDMENT OFFERED BY MRS. ROUKEMA TO THE SCIENCE AND TECHNOLOGY COMMITTEE AMENDMENT

Mrs. ROUKEMA. Mr. Chairman, I offer an amendment to the Science and Technology Committee amendment.

The Clerk read as follows:

Amendment offered by Mrs. ROUKEMA to the Science and Technology Committee amendment: At each of the following locations, strike out "mathematics, science, and critical foreign languages" and insert in lieu thereof "mathematics and science": page 40, lines 8 and 9, 10 and 11, and 21 and 22; page 40, line 25 to page 41, line 1; page 49, lines 23 and 24; page 51, lines 21 and 22; page 52, lines 15 and 16, and 21 and 22; and page 53, lines 10 and 11, 14 through 16.

Page 42, strike out lines 9 through 13.

Page 44, lines 13 and 14, strike out "mathematics, science, or a critical foreign language" and insert in lieu thereof "mathematics or science".

Page 45, lines 2 and 3, strike out "mathematics, science, or critical foreign language" and insert in lieu thereof "mathematics or science".

Page 51, lines 9 and 10, strike out "MATHEMATICS, SCIENCE, AND CRITICAL FOREIGN LANGUAGE" and insert in lieu thereof "MATHEMATICS AND SCIENCE".

Page 51, lines 16 and 17, strike out "mathematics science, and critical foreign language" and insert in lieu thereof "mathematics and science".

Mrs. ROUKEMA (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentlewoman from New Jersey?

There was no objection.

(By unanimous consent Mrs. ROUKEMA was allowed to proceed for 3 additional minutes.)

The CHAIRMAN. The gentlewoman from New Jersey (Mrs. ROUKEMA) is recognized for 8 minutes.

Mrs. ROUKEMA. Mr. Chairman, I offer an amendment to the Science and Technology Committee amendment. My amendment strengthens the bill by focusing the necessarily limited funds on the real emergency problem at hand—that is, the acute shortage of qualified math and science instructors in our elementary and secondary schools. My amendment would eliminate foreign language teaching as an objective of this bill.

Unfortunately, the current bill, and the pending Science and Technology Committee amendment, undermines this effort by including foreign language teachers as eligible for national teaching scholarships and summer institutes. In addition it includes foreign language in the institutional improvement and research and development programs. To mix metaphors, the bill puts apples and oranges into one basket and robs Peter without paying Paul.

If this is viewed as a "foot in the door," or the "camel's nose under the tent" by some of our colleagues who would like for the bill to retain foreign languages, they are barking up the wrong tree. The rationale for the approach taken in the emergency math and science bill has been threefold: First, the shortage of trained, certified teachers; second, competition from the private sector for those capable of teaching these subjects; and third, the steep, upward rise in the world of high technology. None of these factors apply to foreign languages.

Mr. Chairman, let me emphasize that I do not discount the need for improvement in the foreign language abilities of our Nation's students. However, the problem that lies in the area of foreign language is not one of a shortage of qualified instructors. Recent studies have demonstrated that teacher supply is adequate to meet the demand for teachers in the major foreign languages and, in fact, there is a slight surplus in some regions. According to the National Center for Education Statistics, layoffs of elementary and secondary foreign language teachers was second highest among all fields—second only to art teachers. As a percentage of all shortages among teachers, foreign language teachers constituted a low 1.1 percent—compared to 8.3 percent for math teachers, 5.5 percent for physical sciences, and 2.1 percent for general science. In view of these statistics, one can only conclude that including foreign languages in this bill is well-intentioned, but misdirected benevolence.

Clearly, our education system's failings in the area of foreign languages are not due to teacher shortages, but, instead are a result of a decline in foreign language entry requirements for college and a feeling on the part of students that they do not need foreign languages for employment opportunities. In fact, one can reasonbly conclude that, if we put the bill's funds into training of foreign language teachers, we will likely be preparing them for jobs that do not exist.

Both committee reports do point to a need for instructors in some of the more highly specialized languages, such as Arabic, Japanese, and Russian. However, if this is indeed a problem, it is ludicrous to try to throw these apples and oranges into a math and science bill, which is directed toward shortages of teachers at the elementary and secondary level. If the schools are having problems getting students to take the more traditional languages—French, German, Spanish—I hardly see where they will be clamoring for teachers of Arabic, Japanese, and Russian. If our problems with those languages is indeed real, a new initiative is necessary, or perhaps adding funds to existing programs such as the international education programs.

Compare now the supply of math and science teachers to that of foreign language teachers. Statistical data clearly points to what we already know: there is an acute shortage. According to a survey of the National Science Teachers Association, about 32,000 classes—involving 640,000 children—in science and mathematics needed for the 1982-83 school year were unable to be scheduled due to lack of teachers or resources. Less than two-thirds of all high school districts have physics teachers and only 31 percent of all high schools offer courses in calculus. This is principally a result of the dramatic decline in the number of teachers trained annually to teach these subjects. Over the past decade, there have been 77 percent fewer teachers trained in math and 65 percent in science. Compounding the problem, among those who are teaching math and science, the number of unqualified teachers in secondary school classrooms has been estimated to be as high as 50 percent. All of this is occurring at a time when the greatest demand for new jobs is in the high-technology industries where math and science skills are a prerequisite. Thus, we have not only a problem of supply, but also of upgrading of skills to meet the current state of the art and to train currently unqualified and uncertified teachers.

With a problem of such serious proportions, how can we justify taking our limited available funds, which will allow for only 5,000 scholarships next year and 10,000 thereafter, and undermine it by adding a foreign language where there is presently an oversupply.

Mr. Chairman, the bill and the pending Science and Technology Committee amendment are attacking the foreign language problem with the wrong weapon. To simply add foreign language to the eligible activities of the bill is nothing more than symbolic and, in fact, can worsen the overall education problem by contributing to further layoffs and diverting funds from an area where they are clearly needed.

Therefore, I urge the support of my amendment to insure that we achieve maximum use of funds for a problem of critical importance.

□ 1730

Mr. SIMON. I rise in opposition to the amendment.

Mr. Chairman, this is a well-intentioned amendment. Unfortunately of all the bad amendments we have this is the worst, because it attacks a fundamental weakness in our science and math area, science particularly.

Let me point out that we are not mixing apples and oranges. When we had two panels of scientists before the Science and Technology Committee, my good friend from Oklahoma (Mr. MCCURDY) asked the one panel: "Should we include foreign languages?" And the panel unanimously said, "Yes."

I asked the second panel, I do not recall the names of the scientists, and the one scientist said, "It is a desperate need."

Now, why is it a desperate need? Well, my friends you have to reflect just a little bit. What are the high-technology countries? They are not English-speaking countries. And the scientific exchange that is taking place today is a one-way exchange. Our good friends in Japan learn and understand English and they get our information and knowledge. But we are not studying Japanese or German or the other languages where we have this problem.

So, we have, in this bill, 10 percent of the scholarship provisions or about 1 percent of the total in this bill is assigned to this need. And I would point out one other thing: The Secretary of Commerce tells us, in speeches around the Nation, and his predecessors also, that if we want to sell abroad we are going to have to learn other languages. I heard in testimony this morning, and I have not seen the speech, but the Secretary, Secretary Weinberger, spoke last week before a group of educators and said there are three fundamental needs in the field of defense, as far as precollege education and college education: Science, math, and foreign languages.

So, we are talking about something that is not theory, we are talking about something that is not simply a desirable cultural exchange or something like that.

We are talking about something that is very, very fundamental.

Let me add one other thing: Congress has many strengths, but we also have some weaknesses. One of our weaknesses is we respond to yesterday's problems and today's problems. We are not very good at responding to tomorrow's problems.

And here, every study I have seen, every study, without exception, suggests this is a major problem that we are going to be confronting. It is a spotty problem now. If the gentlewoman from New Jersey is talking about Spanish teachers right now, there are some areas but it is not an overwhelming problem. But if you are talking about teachers of Japanese, teachers of Italian, teachers in many areas, then you are talking about a very serious problem.

So, I would hope, with all due respect to my friend, that her amendment, well-intentioned, but a backward step, would be rejected.

Mr. MCCURDY. Would the gentleman yield?

Mr. SIMON. I would be pleased to yield to my colleague.

Mr. McCURDY. I also rise in opposition to the amendment. I would state originally when this initially came up I did have some opposition to the language provisions. But after discussions with the gentleman in the well and his leadership in that area I also concluded that there is a need. I might add that the gentleman worked with the Science and Technology Committee and agreed to limit the amount of money designated for languages.

□ 1740

And also to include an important designation and that is the need for critical languages. As a member of both the Armed Services Committee and the Select Committee on Intelligence, we were able to make some designations and come up with some areas where national security is involved and based on those considerations and the work that the gentleman has done and his willingness to compromise; I support the gentleman's position and oppose the amendment.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(At the request of Mr. DE LA GARZA, and by unanimous consent, Mr. SIMON was allowed to proceed for an additional 4 minutes.)

Mr. DE LA GARZA. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I yield to my colleague, the gentleman from Texas.

Mr. DE LA GARZA. I appreciate the gentleman yielding. I am sorry that I was out of the Chamber, but I was watching on TV. I came right away because the gentleman and I have spoken so many times about what he so eloquently discussed a little bit ago.

Let me say how heartily I concur with the gentleman, because in two areas, one in the agricultural sector where it is the only positive balance-of-payments sector that we have in America and yet one of the areas in which we are so deficient is that all the other countries in the world when they come into a country to sell their products, they come not only wearing the clothes of that area, knowing the culture, the idiosyncrasies and the customs, but speaking their language.

I have in a very cursory way made a study. In America we speak more languages than in any other country in the world, but yet we are a monolingual society. We cannot go to the other countries. Once you get out of the little neighborhood or once you get out of the ethnic area, we are monolingual. We cannot speak any other languages.

So it is in the science field. i have tried to work with a few languages myself and I find out how helpful it is in every area, in diplomacy and just being good neighbors. Even when you have sensitive areas to discuss, how much easier it is when you discuss it in the language of the other party. By and large, the other party speaks English. I have not seen a foreign official, including some of our adversaries with whom I have met, that does not speak English; but you can see the change in expression when you speak their language.

In technology, in medicine, in engineering, in avionics and space, certainly language is the most important factor when you are dealing with plans and when you are dealing with technology at very high levels.

I will not speak against the amendment of the gentlewoman from New Jersey, but I will say that the gentleman is correct and I join him in his opposition to the amendment, because I know the positive side that strategic language studies can mean to our country, not only in the national defense, but also in how we trade with other countries and eventually how we live with other countries.

The planet is so small that we should as Americans have as the primary effort for our integrity and for our defense being able to communicate with the rest of the world in their languages.

Mr. SIMON. Mr. Chairman, I thank the gentleman from Texas. I agree with him completely.

Let me add just one other point that what the gentleman has said reminded me of. A decreasing percentage of the world's technical journals are printed in English. An increasing percentage are printed in other languages.

The United States represents 3 percent of the world's population. If you believe that 3 percent has a monopoly of the world's technical knowledge, then support the amendment of the gentlewoman from New Jersey. If you believe there is a chance that we can learn from others, then I hope you will reject that amendment.

I thank the gentleman from Texas.

Mr. GOODLING. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, first of all, I would like to say that I think the gentlewoman from New Jersey made one of the better statements that I have ever heard made on this floor. The gentlewoman was not in any way indicating that she did not think we as Americans should not become more concerned, more interested, more knowledgeable, more capable in dealing with foreign languages. She did not say that at all.

What she said was that this bill is geared to prepare for a shortage of science and math teachers. That is what the bill is all about. There is very little money involved.

Now, we try to take that little money and spread it beyond and that just does not make good sense.

What we are trying to do in this bill is try as quickly as possible to get the critical shortage areas in the teaching profession brought into balance with our needs; so we are trying to get those math and science teachers trained as quickly as possible.

Let me point out that if we are talking about math and science in foreign languages, then certainly the only area in this bill that we should be concerned with is the area that would deal with scientists, would deal with sophisticated technical capabilities to read the research and to comprehend what is written in that research. We certainly should not be talking about conversational language in this kind of bill.

In fact, as someone will point out, in the budget from our committee we talk about new initiatives in foreign languages. They are important; although, let me tell you, we do not know how to accomplish it. We have not given much thought to that. About the only way you can do it is to mandate from the Federal level that the colleges will demand foreign languages in their entrance requirements. I do not believe we ever want to do that from the Federal level.

One statement was made that is incorrect that I would like to call to your attention. When many of us in the Congress of the United States attended college and attended high school, the diplomatic language worldwide was French. Do you know what the diplomatic language is now? It is English.

The language of science and mathematics when I was in high school and when I was in college was German. Do you know what it is now? It is English.

Let me quote from Newsweek November 15, 1982:

> English has replaced French in the world of diplomacy. English has replaced German in the field of science. English replaced German after World War II when scores of German scientists moved to Britain and the United States. Now two-thirds of all scientific papers are published first in English.

The teaching of English is so important in this country of ours because of the changes that have been made worldwide.

Let me again say that my colleague, the gentlewoman from New Jersey, agrees, I am sure, with what the gentleman from Illinois said and what the gentleman from Texas said about our need to be bilingual, but that is not what this bill is all about. This bill is talking about training teachers quickly to fill the vacancies that exist in advanced mathematics and in advanced science. I think that is what we should concentrate on with these limited amounts of funds.

Mrs. ROUKEMA. Mr. Chairman, will the gentleman yield?

Mr. GOODLING. I yield to the gentlewoman from New Jersey.

Mrs. ROUKEMA. Mr. Chairman, I would just like to make another observation and also reiterate the fact that we have to start with the basic understanding that there is presently no shortage in foreign language teachers. The problem has a very different character than the one we are dealing with in math and science; but I would like to comment on the attribution that this has somehow something to do with national defense or foreign policy or intelligence. I think that is irrelevant to this bill.

There is no question but that we have been notorious in this country for not having diplomats that know how to speak the language, but I think there is quite a different kind of approach to dealing with that problem than training elementary and secondary foreign language teachers on a crash course. That is my conviction on this particular issue.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. GOODLING. I yield to the gentleman from Illinois.

Mr. SIMON. I have two comments. No. 1, the quotation the gentleman made from Newsweek is correct, but my statement remains correct and that is that a decreasing percentage of the world's technical journals are in the English language.

I would simply point out one important factor, just one little incident. An engineer from Michelin, the French radial tire manufacturer, published an article in a French technical journal why certain processes do not work in the manufacture of radial tires. It so happened that no one in Firestone read the French technical journal and they made some mistakes that cost them tens of millions of dollars.

□ 1750

Just one point. If I could respond to the gentlewoman and take your time, and I appreciate your courtesy, when the gentlewoman says this is not a security bill, one of the reasons for this bill is that the Armed Forces of this Nation face a major problem.

The CHAIRMAN. The time of the gentleman from Pennsylvania (Mr. GOODLING) has expired.

(By unanimous consent, Mr. GOODLING was allowed to proceed for 2 additional minutes.)

Mr. GOODLING. Can the gentleman wind it up quickly?

Mr. SIMON. Yes, and I will just take 30 more seconds.

Mr. Chairman, when the Secretary of Defense tells us we better pay attention to this area, when former Deputy Director of the CIA, Admiral Inman, says this is a major security problem, we can ignore them. We can ignore these scientists who testified before the Committee on Science and Technology, but I hope we have the good sense not to ignore them.

Mr. GOODLING. May I just respond very quickly by saying that the gentleman has reinforced my argument. When I say if there is any connection in this particular legislation with a foreign language, it is in the area of reading and comprehension of scientific and technical research. We are not going to get to that point, we are not going to save that tire company you mentioned earlier, by simply training more teachers.

That is why I believe there is a vehicle, there is a need to do what the gentleman wants to do, but it is not in this particular legislation.

Mrs. ROUKEMA. Mr. Chairman, will the gentleman yield for just one question?

Mr. GOODLING. I yield to the gentlewoman from New Jersey.

Mrs. ROUKEMA. I thank the gentleman for yielding.

Mr. Chairman, the author of this proposal has been the distinguished chairman of the Postsecondary Education Subcommittee for some years, and I would like to ask a sincere question.

I alluded in my statement to the fact that there are existing programs, perhaps the international education program, which are existing, not funded I am sure consistent with what you feel the funding level should be, but is that not a more appropriate vehicle, particularly since it had its inception, I believe, in concern over the precise national security and foreign policy questions that you have in mind? Is that correct?

Mr. SIMON. If the gentleman will yield, I would be pleased to respond.

Mr. GOODLING. I yield to the gentleman from Illinois.

Mr. SIMON. That is title VI of the Higher Education Act. It is funded at $26 million. It primarily teaches some of the lesser known languages, but it does not address this problem at all. This problem is a different problem and a very real problem.

The CHAIRMAN. The time of the gentleman from Pennsylvania (Mr. GOODLING) has again expired.

(By unanimous consent, Mr. GOODLING was allowed to proceed for 1 additional minute.)

Mr. RITTER. Mr. Chairman, will the gentleman yield?

Mr. GOODLING. I yield to my colleague, the gentleman from Pennsylvania.

Mr. RITTER. I thank the gentleman for yielding.

Mr. Chairman, I would like to ask a question of the gentleman from Illinois.

Are we including foreign languages in this bill because there is a crisis in the learning of foreign languages that goes beyond science and math teaching? Is that what we are doing? I think there is a crisis in foreign languages, just as the gentleman does.

Mr. SIMON. If the gentleman from Pennsylvania would yield to me, I, frankly, believe there is this overall problem, and this, in a small way, addresses that, but there is in the scientific and technical area a very real problem.

The majority of teachers of German and other languages in our schools are literature-oriented. They are not oriented toward the technical fields, plus we are not developing the teachers in Japanese, Arabic, and some of the other areas.

The CHAIRMAN. The time of the gentleman from Pennsylvania (Mr. GOODLING) has again expired.

(On request of Mr. RITTER and by unanimous consent, Mr. GOODLING was allowed to proceed for 2 additional minutes.)

Mr. RITTER. I understand what the gentleman from Illinois is saying, and I think that is a very important point. I think there is, indeed, an enormous crisis in foreign language knowledge and training in this country. However, if we want to concentrate on the technical side of those foreign languages, for example, in dealing not only with scientific literature but in dealing with export markets in high technology, then I submit that Arabic is not one of those languages. There is a great need to learn Arabic, but it is not really related to the science and technology, certainly not on the research side, but perhaps it is related on the export side of high technology products.

I would urge my collegues to see this one clearly: Japanese language training in this country is like a desert. It is empty and it is in great need of irrigation, planting and nurturing. If the money in this bill all went into learning Japanese and teaching Japanese, we would have made a great stride forward in the science and technology aspects.

Russian, for example. I do not feel at this point, speaking fluent Russian by the way, that Russian is a necessity for science and math. Basically the great majority of work that is coming out of the Soviet Union that is high quality is in English, but for export and for training and for education, we have a tremendous vacuum in the field of Japanese, and I might add Chinese, not even so much for mainland China, but Chinese for east Asia.

Mr. CORRADA. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

I am concerned that in addition to a shortage of science and mathematics teachers in our country there is another equally serious problem in our educational system—the lack of foreign language proficiency by our youngsters. For this reason I want to emphasize the importance of the provisions under part B of H.R. 1310

which would allow teachers to be trained for careers in foreign language instruction as well as science and mathematics.

Our Nation has failed for years and years to face the reality that one of the reasons we do not get our message across to the peoples of the world is due to the cultural isolationism in which we keep ourselves.

There is some degree of resentment against the United States in Latin America, for example, because of the lack of proficiency of American men and women in understanding foreign languages, including Spanish. There is a perception among many peoples of the world, rightly or wrongly, that there is a degree of arrogance among English-speaking people who do not care about other languages because they think English is the language of the world and others should learn our language if they want to be able to talk to us.

Let me say this. I am a proud Puerto Rican and a proud American citizen. In Puerto Rico every time someone comes from the U.S. mainland who can say a couple of words in Spanish, the doors of understanding and better relationships are immediately opened. Yes, I am fully supportive of science and math. It is the time to pass this bill. But I will tell you that knowledge of a foreign language by English-speaking children and youngsters of this Nation—not Hispanic children or those who need bilingual education, but the typical American male and female who only knows English and has a dire need to understand foreign languages, whether it be Spanish, French, Japanese, German, or Russian—must become an integral part of our education system if we want to keep the United States from becoming isolated from the rest of the world. Now more than ever, with the threat of mass destruction hanging over our heads, we need to be in the position of being able to persuade the other countries of the world to follow our leadership in strengthening democracy and peace.

So I would hope that while we debate the merits of H.R. 1310 we do not fail to remember that human understanding between all the nations of the world is just as important as expertise in science and math. Science and math can lead us to destruction, but human understanding can allow us to use the talents of our children in science and math to make sure that the generations to come are able to live in a world of peace.

Mr. GOODLING. Mr. Chairman, will the gentleman yield?

Mr. CORRADA. I yield to the gentleman from Pennsylvania.

Mr. GOODLING. I thank the gentleman for yielding.

Mr. Chairman, I would just like to assure the gentleman that there is no one on this side who does not agree wholeheartedly with his comment when he says the lack of proficiency to speak and comprehend foreign language is a disgrace in this country.

□ 1800

Our only argument is that this is not the vehicle. We have money allocated in our budget from the Education and Labor Committee where we could really attack this.

What we are talking about, 10 percent of the little bit of money that we have here in the first place, even if they used it all, would not begin to make a dent in what it is the gentleman is talking about. I agree with what the gentleman is saying. I think we need to come up with a vehicle to do exactly what the gentleman is talking about.

Mr. CORRADA. If the gentleman will yield back, I will say that obviously we do not intend in this bill through this provision pertaining to foreign languages to address the brother problem of lack of knowledge of foreign languages by youngsters. But by simply allowing that some funds under this bill, a very modest amount, may be utilized in connection with teaching of foreign languages for people who may be interested in using that knowledge in the furtherance of science and math is something that is perfectly valid, and I do not see why it cannot be done.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. CORRADA. I yield to the gentleman from Illinois.

Mr. SIMON. Mr. Chairman, I simply want to commend the gentleman. It is true this bill is about science and technology. But we have a problem in that area. The gentleman has pointed this out well, and I commend him.

Mr. ERLENBORN. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I have been listening to this debate, and I do rise in support of the amendment. But I have found the debate very interesting, in that there seems to be no difference of opinion at all from one side of the aisle to the other, the supporters and the opponents of the amendment, that there is a problem with our foreign languages capability.

So this is really not a debate over whether we should do something or not. It is really a debate that I would say is based on an issue of confidence.

I think we have more confidence in the gentleman from Illinois than he has in himself. We have confidence in the gentleman that he understands this problem and can help fashion the solution and then get a comprehensive program for foreign language instruction through our committee and through this Congress.

We also believe that, once he does that, the problem will be better addressed than if we nibble away at it. We add a little bit here in one program, and a little bit more in another program, and a little bit there. And you know what happens? Each program has its own overlay of administrative costs.

How much better it would be if the gentleman would put his efforts into designing and carrying through our committee in the Congress a comprehensive program that everyone here today seems to admit is necessary. And instead of having a web of administrative costs over little programs attached to popular bills on other subjects, the gentleman would have one program with less administrative costs that would address the problem better.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Illinois, in whom I have the greatest confidence.

Mr. SIMON. Mr. Chairman, I appreciate that great confidence the gentleman has in me. And I would have greater confidence in the answer the gentleman provides if he can give me assurance that when we come up with this comprehensive program, that the President of the United States will sign that program.

Mr. ERLENBORN. Oh, is that why the gentleman is attaching it to this bill? The gentleman thinks he is going to sign this one?

Mr. SIMON. I believe the President will sign this one.

Mr. ERLENBORN. Well, the gentleman may have placed his confidence in the wrong bill.

Mr. BATEMAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I have listened for some time this afternoon to the debate on this and the previous amendments, and I find myself in the unusual position of wondering who is on what side, because it has, as just observed, come through to me that there is little if any disagreement in terms of what our defined national objectives ought to be.

Obviously, we are here dealing with a bill that has as its purpose and at its outset had as its purpose the enhancement of scientific and mathematical education and training. No one in any sense fails to recognize that we are a nation critically deficient in linguistic skills. Sometimes I have even heard it said that we speak one language poorly. We certainly do a very poor job of speaking more than one.

But that is not the issue, and I think there is an inherent danger that if we are indeed serious about our linguistic deficiencies that what is offered in this bill is going to be no more than some pablum, some symbolism that

makes it more difficult for this Nation to really address the problem.

If this bill dealing with science and technology or science and mathematical education addressed funding to make available from all of these Japanese scientific technical journals and other critical language journals material that American scientists ought to have access to and meaningful ability to understand to translate them, it would have some immediate practical implication in terms of the national problem. Without this amendment, all that is going to be done is divert a part of the funds which would be provided under this bill to offer scholarships to some amorphous group out there somewhere that we hope will emerge and want to take courses in learning how to teach Japanese, Chinese, Arabic, or whatever is defined as a critical language. It is not going to happen that way. We are not going to accomplish anything by adding foreign language, even indeed critical foreign languages, to the provision of this bill. We are going to be purporting to do something about a problem when we actually accomplish nothing but the expenditure of some more money.

Let us reserve that money. Let us reserve our very efficient capability to fund programs which are needed and spend it in a well-directed program.

The amendment of the gentlewoman from New Jersey has been referred to as being a misguided, well-intentioned effort. I would suggest that the provision in this bill as it comes before us with foreign language provisions in it makes it in that regard an unguided missile. We are throwing some money at a problem. The problem is there. The problem is real. But throwing that money through the vehicle of this bill is not addressing the problem.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. BATEMAN. I yield to the gentleman from Illinois.

Mr. SIMON. Mr. Chairman, was the gentleman there when the scientists who testified before the Science and Technology Committee were asked whether it was important that we include this for science and technology reasons?

Mr. BATEMAN. The answer to that question is that the gentleman was not, in fact, present when that was said, but I have heard the gentleman from Illinois relate it as being a fact and certainly I would not dispute the fact that some eminent scientist from somewhere said it at the committee when I was not present.

Mr. SIMON. It is interesting that we had two panels of scientists, and they all said the same thing.

Now, maybe these scientists do not know what they are talking about. They were not there at my request, but it occurs to me that maybe this House ought to listen to some of these scientists.

Mr. BATEMAN. I would suggest to the gentleman, in response, it is more than appropriate that we listen to these scientists. It is certainly more than important that these scientists help us convince the people and all of the Congress that we indeed need to do something about our language deficiencies. But I would suggest that perhaps a scientist is not the area of expertise that I would go to in terms of how to solve the problem in the teaching of science and in the funding the most effective way to get the job done.

Mr. PANETTA. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I think the most important thing we have to ask is: What is the purpose of the bill? And that has been mentioned a number of times. The purpose is, obviously, to deal with science and technology as it relates, obviously, to our overall national security, and the reality is that if any of us go to Japan or to Germany or to the Soviet Union, their training in terms of science and technology is interrelated with language training. They are not separate. They would not divide it. It is key. It is together, because it serves as an information exchange, because it relates to the interchange of ideas between countries, and because, more importantly, they feel, the scientists themselves feel, that that kind of training is essential if we are truly to improve our science and technology in this country.

The status of foreign language training in this country is scandalous. That is not my word. That is not just the view of Members who have spoken here. There was a national commission established that looked into this issue, and in 1979 reported back to the country that the status of training in foreign languages in this country is nothing less than scandalous. That is cause for concern.

The gentleman from Illinois and I have been raising this issue year after year since then, and nothing happens. Nothing happens.

□ 1810

Obviously we would like to see a comprehensive bill on language training coming out, but it has not moved.

It is related to the issues that are raised here in science and mathematics, and for that reason I think it is most essential that we retain it certainly at the higher education level.

The issue has been raised in several areas that I think are cause for concern for us. The CIA has obviously referred to this as an area where language training is not only getting bad, it is getting worse. The military has tried to increase the number of students going to the Defense Language Institute which is in my district because they see a desperate need to increase language training because it is so essential to our national security.

In foreign policy I can give you example after example of how your embassies have virtually failed to provide diplomats who have proper language training. Examples have been shown in Afghanistan with the Soviet Union all around your embassy and when a Soviet soldier went into our Embassy to surrender to our Embassy there was not anyone in our Embassy who could speak the Soviet language.

In Iran, out of 60 diplomats that were there for us, only 6 spoke the language of the country of Iran.

There is example after example after example and it is an outrage. We ought to be concerned about it.

The Japanese, the Soviets, the Germans understand the importance of this and are emphasizing language training.

Why is it a problem here? Because of the attitudes that have been reflected on the floor. We are all concerned about it but obviously it should not be something that we focus on in this issue. Let us deal with it later.

Teachers, we have teachers, but somehow we do not know whether those teachers are trained to fully deal with the language and whether they are in the areas of concern that we should be focusing on in terms of language training.

This needs to be addressed now, not later. I happen to believe that there is a fourth R developing if we believe in a modern world and we want to participate in this modern world. That R is a reality. It is the reality that relates to our national security. It is the reality that relates to our diplomacy. It is the reality that relates to our economy, and if we are going to participate in that world of the future then we have to start now.

It is for those reasons that the amendment of the gentlewoman ought to be rejected.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. PANETTA. I am pleased to yield to the gentleman.

Mr. SIMON. It occurred to me while I was sitting here one other little incident that I hope may have some impact on any of our colleagues who have not made up their mind.

Last week I noted on my schedule that the head of the National Science Foundation, Mr. Ed Knapp, was coming to my office. I thought, well, maybe he is going to ask me to get rid of the foreign language provisions in here.

He came in and he said, "I just want to thank you for adding this provision in your emphasis here. It is needed."

I thank the gentleman from California.

Mr. PANETTA. I thank the gentleman.

Mr. GUNDERSON. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, thank you, and my colleagues, and particularly this distinguished chairman of our Subcommittee on Higher Education. It is difficult to stand up in opposition to his concerns in this particular area, but I want to go back to what I said earlier this afternoon in the general debate, and that is let us understand what we are doing today.

We are trying to target a very limited and yes, inadequate amount of money to a very serious problem that we have.

If I heard one criticism of the National Defense Education Act from all of you who have far more information and understanding of that act than I do, it is we try to do way too many things with too few dollars and, frankly, we accomplished little if anything because of that.

Earlier today the Education and Labor Committee marked up the budget recommendations that were forwarded to the Budget Committee. I think we need to understand that in those actions we show that it was not only the majority party but the minority party who shares the concern and the commitment to foreign language education that must come out of this Congress for our recommendations from the minority side which included some $50 million in initiatives for foreign language in this session of Congress and in the fiscal year 1984.

We share that commitment, and something ought to be done, but now is not the time to do it in this particular bill.

The only thing I can add that has not been said, I think, is understand what all of this means to your State and to your district. We are talking about a total of $20 million in the scholarship area. We are talking about the fact that in the formula each State is going to have 20 applicants for scholarships times the number of congressional districts, so we are sort of assuming at the maximum you are going to get 20 scholarships in your particular district.

When I look at my own State I find that we have between a 30- to 40-percent shortage of math and science teachers and I say, then, is this the place to put a dilution, to put a requirement or an opportunity that some of that money can go for foreign language when we cannot even make the basic intent.

You know, if we want to accomplish what we are talking about here with foreign language being a part of the necessity to understand math and science in this country, I would suggest we do two things. No. 1, we as a Congress pass either a law or a resolution calling on every college and university in this country to end their entrance requirements, insist that any of those students entering college must have taken some foreign language in high school. They do not do that today. We all have talked about the Ph. D.'s who have never had even a course in a foreign language.

Second, perhaps what we ought to do is not be spending dollars, but what we ought to do is simply require these same colleges that in any of their bachelor of science degrees issued in this country from any college or university that they must have a foreign language requirement to get that bachelor of science degree.

There are ways in which we can accomplish this without simply diluting the limited $20 million we have.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. GUNDERSON. I am happy to yield.

Mr. SIMON. I thank the gentleman for yielding. I have great respect for my colleague from Wisconsin.

If we were to require what the gentleman suggests we would for the first time in the history of this Nation have the Federal Government moving into those colleges and universities and saying, "You have to teach this."

I have avoided that and I think this Congress ought to continue to avoid that.

I think we have to say what are ways that we can meet the problem that are in line with our traditions and it seems to me that the bill as it now is is in line with our traditions.

With all due respect to my good friend from Wisconsin, what he suggests is a significant departure from what we have done. I think it is a departure that we should not make.

Mr. GUNDERSON. I agree with the gentleman. I do not think this Congress ought to mandate by law that that be done.

Mr. SIMON. Then I misunderstood the gentleman.

Mr. GUNDERSON. I think the response that ought to be given to those panels of scientists from the universities who come to our committees and sit there and say we have got a problem, people do not understand foreign language so you, the Federal Government, give us more money, because money is the end all, the fact is we ought to tell them "Go home, get your house in order. If you think your scientists need foreign language requirements, mandate it as a part of the requirement to get a degree from that university. Do not always come to us and ask us for money."

Mrs. ROUKEMA. Mr. Chairman, will the gentleman yield?

Mr. GUNDERSON. I am happy to yield.

Mrs. ROUKEMA. I am really most appreciative for the gentleman from Wisconsin's statement because he has brought the issue back to first principles, which is really what is involved here.

Never mind the obfuscations concerning foreign policy and diplomatic needs. The real issue is we have a limited number of dollars. We have a crucial shortage of math and science teachers. These funds are going to be distributed across the States and how much of those funds do you want to be diluted or undermined by spreading them thinner through an inappropriate response to the foreign language policy?

Mr. PACKARD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the amendment is designed to do basically two things, in my judgment. One is to prevent the dilution of funding in a bill that is designed to solve a major problem in this country, and that is a shortage of math and science teachers.

Second, it is designed to prevent a dilution of another program that the chairman of the subcommittee that is concerned about this issue has designed to prevent it from diluting a meaningful foreign language program.

I do not believe that the amendment is designed at all to dispute the need for improvement in the foreign language program. Because of that I think we ought not to allow foreign language and its needs to enter into diluting what we have now worked so hard to design, a very important bill that addresses the math and science problem.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. PACKARD. I yield to the gentleman from Illinois.

Mr. SIMON. The gentleman, as so many others have used this term about diluting. Let us talk about what we are doing. We are talking about a $425 million bill, and the maximum on foreign languages in this is $5 million, or about 1 percent.

□ 1820

Now, that is the dilution that you are talking about. And when the scientists tell us we ought to be doing it.

Mr. PACKARD. But the general impression of every member of the committee has been that this is not enough to really even address the math and science problem. Then to further dilute what is already perceived by the majority of this committee, to extract from what is perceived to be an inadequate amount to address the math and science problem, then maneuver that over into a totally unrelated, in my judgment, area that would prevent us from meaningfully addressing the foreign language at another time, to me would not be in the best interest of what we have been

working toward in the existing bill. For that reason I would support the amendment to keep the bill as clean as possible, to allow it to remain to help solve the problems of math and science rather than eliminate the possibility in the future of addressing the foreign language problem. I personally feel it would be very difficult, Mr. Chairman, to even set up the program and to administer the program of foreign language with the small amount of money that we are talking about and it would merely prevent us from meaningfully getting into the foreign language program at a later point.

The CHAIRMAN. The question is on the amendment offered by the gentlewoman from New Jersey (Mrs. ROUKEMA) to the Science and Technology Committee amendment.

The amendment was rejected.

AMENDMENT OFFERED BY MR. ERLENBORN TO THE SCIENCE AND TECHNOLOGY COMMITTEE AMENDMENT

Mr. ERLENBORN. Mr. Chairman, I offer an amendment to the Science and Technology Committee amendment.

The Clerk read as follows:

Amendment offered by Mr. ERLENBORN to the Science and Technology Committee Amendment: Page 46, line 6, after the period insert close quotations marks and a period, and, beginning on line 7, strike out all of part C through page 47, line 19.

Mr. ERLENBORN. Mr. Chairman, this amendment would eliminate part C (teacher incentive grants) from title I of the bill. This is an important amendment because it is part of a series of amendments I intend to offer which would result in a $50 million program designed to increase the short-term supply of mathematics and science teachers. My series of amendments, in effect, would replace the proposed $400 million package with a more efficient and reasonable proposal—one designed to meet the emergency without ignoring an even more immediate crisis—the looming $200 billion budget deficit.

To summarize, this amendment strikes part C of title I (teacher incentive grant program). It is the first of three amendments I intend to offer with the goal of having the bill consist of only title I, part B (teacher scholarships/summer institutes and postsecondary assistance) at a total cost of $50 million.

Mr. Chairman, I hope that the amendment may be considered and adopted with little or no further debate.

Mr. PERKINS. Mr. Chairman, I rise in opposition to the amendment.

I will not take the 5 minutes. Congressman MILLER in committee offered this amendment. It involves $5 million.

The amendment would eliminate the teacher initiative grants in part C of the bill. Mr. MILLER had an idea that it may encourage better teaching in math and science if some grants were made directly to the teachers.

Now, I oppose the amendment offered by the gentleman from Illinois (Mr. ERLENBORN), that this new program will do some good, making some small grants to the teachers, I have no objection to trying this idea.

This section of the bill was added by Congressman GEORGE MILLER in the Education and Labor Committee. It is for fiscal year 1985 only, not for fiscal year 1984, on a trial run basis for 1 year. And it is the only section of the bill that directly rewards classroom teachers for creative ideas, with funds to improve classroom instruction.

Under the circumstances I would urge the defeat of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. ERLENBORN).

The question was taken; and on a division (demanded by Mr. ERLENBORN) there were—ayes 12, noes, 28.

So the amendment to the Science and Technology Committee amendment was rejected.

AMENDMENT OFFERED BY MR. HARRISON TO THE SCIENCE AND TECHNOLOGY COMMITTEE AMENDMENT

Mr. HARRISON. Mr. Chairman, I offer an amendment to the Science and Technology Committee Amendment.

The Clerk read as follows:

Amendment offered by Mr. HARRISON to the Science and Technology Committee amendment: Page 49, line 21, insert "certified" before "teachers".

Mr. HARRISON. Mr. Chairman, I will not take 5 minutes but to explain briefly.

The purpose of this amendment is to limit eligibility for the summer institute program and only for the summer institute program to certify teachers.

Mr. GOODLING. Mr. Chairman, would the gentleman yield?

Mr. HARRISON. I will be happy to yield to the gentleman.

Mr. GOODLING. I thank the gentleman for yielding.

We would be happy to accept the amendment on this side.

Mr. HARRISON. I thank the gentleman.

Mr. PERKINS. We see no objection to it.

Mr. FUQUA. Mr. Chairman, I rise in opposition to the amendment.

We do not accept the amendment. This was a provision that was offered by the distinguished gentleman from California (Mr. DYMALLY), who is a member of our committee and it was intended that with this, that it is not required that teachers or supervisors be certified, but it was the committee's intent that such participants at least meet the mimimum requirements required for teaching in the private or nonpublic schools in a particular State. In addition it is intended that such programs also provide for allowing at least some portion of training people who have outstanding experience in science, math, engineering and so forth.

I think to do this gives some flexibility to a teacher who may have only 1 or 2 hours of college credit lacking certification.

□ 1830

This would provide the means whereby we could certify more teachers in this field.

So I would be happy to yield to my colleague, the gentleman from California (Mr. DYMALLY), who is an authority and has been on the certification board of the State of California, certified in five subjects. I think probably more than anybody in this House the gentleman is familiar with the issues involved in this particular item.

Mr. DYMALLY. I thank the chairman.

Mr. HARRISON. Mr. Chairman, may I reclaim my time just to make a brief statement and then I will be happy to yield.

The CHAIRMAN. The gentleman from Florida has the time at this time and is recognized for 5 minutes.

The Chair will protect the gentleman.

Mr. FUQUA. Mr. Chairman, I am happy to yield to the gentleman from California.

Mr. DYMALLY. I thank the gentleman.

Mr. Chairman, this can be called the exclusion amendment. In California we used to call it the Einstein exclusion amendment because under the provisions of this amendment if Einstein were alive he would not be able to teach in the California schools, as a result of which our former colleague, Leo Ryan, headed a joint committee on teacher credentials and we traveled all over the country looking at this problem.

What was intended here was to provide an opportunity for people who are qualified in the field of math and science to take advantage of the provisions of this bill so that they can become certified.

The amendment before us would limit access to the programs in the emergency science education bill to certified teachers. On the face of it that would seem reasonable. After all, we do not want unqualified people teaching our children. But this amendment is deceptive. It will not accomplish what it appears to accomplish. As a teacher possessing four teaching credentials, and as a former member of the Joint Committee on Credentialing for the State of California, I am well versed in the uses and abuses of certification.

I think you should know just who would be excluded from access to these programs if this amendment is

passed. Language in the Education and Labor Committee report on this bill makes it clear that credentialing agents other than State or local education authorities may declare a teacher certified. What this means is that it would be possible under this bill for a religious leader or a president of a private school consortium to rule that the teachers under him or her are certified. Those teachers then would be eligible to take part in the programs in this bill.

In fact, if this amendment is passed only one group of people would be excluded from the programs. That group is made up of scientists, mathematicians, and other technical experts. We often give lipservice in the Congress to the concept of education and industry cooperation. One very important way in which industry can contribute to the educational process is to allow release time to their experts to share some of that expertise with our children in their classrooms. In the instances where scientists and mathematicians have been allowed this access to the classroom the results have been striking. The most obvious example is the North Carolina School of Science and Mathematics, a high school that turns out more National Merit Scholarship winners than any other school in the country. This school employs professional scientists and mathematicians. When the school first tried to get these experts into their classroom, there was a great deal of wringing of hands, because, you see, these people were not certified. After some negotiating, the State credentialing agency created a special emergency certification for these scientists. If the amendment before us passes, scientists, and mathematicians would be excluded from the kind of training that would show them the best ways to convey their knowledge to our children. If this amendment passes, we might just as well call this bill the Exclusion Act, because if Einstein were alive today he would be barred by this amendment.

Several years ago California was faced with a similar problem as we face today. Our certification laws were so strict that they prevented people with Ph. D.'s in fields where we had teacher shortages from entering the classroom. In response to this problem, our former colleague, Leo Ryan and I coauthored a bill to rectify this problem by giving the kind of flexibility that was written into the bill by the committee. Now in California at least if a man or woman with the scientific stature of Albert Einstein wished to share his knowledge with our children he or she would be able to. Passing the amendment now before us would simply perpetuate within the United States the shortsightedness which, for a time, prevented California from getting some of its most talented people into the classroom.

I am sensitive to the concerns of my colleagues who do not want to see unqualified people teaching our children. I share that concern. This amendment does not alleviate the need for that concern, however, If the amendment passes we should become more rather than less concerned. I would suggest that it would assure that those who are unqualified could not use these programs to gain access to the classroom. In addition, I am prepared to enter into the record of today's proceedings a statement clarifying the intent of the amendment which I offered in the Science and Technology Committee to remove the qualifier "certified" which had formerly been used to describe teachers who could make use of the program. That amendment was passed unanimously by the Science and Technology Committee. The amendment you now have before you would negate this unanimously passed amendment. I strongly urge you to defeat the amendment. It will not accomplish what you think it will. Moreover, it will impede progress toward innovative solutions to the science and mathematics teacher shortage.

Mr. PERKINS. Mr. Chairman, will the gentleman yield to me?

Mr. DYMALLY. I would be glad to yield to the distinguished chairman.

Mr. PERKINS. I am going to ask the gentleman to withdraw this amendment. I do not see why we should have any division here at all. We are together, both committees. There is a difference of opinion. It is a small matter and we will have more time to think about it. Let us not go ahead and have any vote on this amendment.

Mr. HARRISON. Mr. Chairman, I will certainly defer to the chairman of the committee.

I would ask that this might be considered in conference should the opportunity arise.

Mr. PERKINS. We will consider it in conference if the Senate adopts such a provision.

The CHAIRMAN. Does the gentleman from Pennsylvania ask unanimous consent to withdraw his amendment?

Mr. HARRISON. Mr. Chairman, I ask unanimous consent to withdraw the amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

PARLIAMENTARY INQUIRY

Mr. COLEMAN of Missouri. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. COLEMAN of Missouri. Mr. Chairman, I thought I heard the chairman, the gentleman from Kentucky (Mr. PERKINS) say that he would accept the amendment. Is that what the gentleman was saying?

Mr. PERKINS. The gentleman is exactly correct, but at that time I did not thoroughly understand the situation and I will apologize for my misunderstanding.

Mr. CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

Mr. COLEMAN of Missouri. Mr. Chairman, reserving the right to object, this will not become a part of the bill that we pass if we pass this today. Is that correct?

Mr. PERKINS. That is correct.

Mr. COLEMAN of Missouri. So it could not be dealt with in conference unless the other body put it on; is that correct?

Mr. PERKINS. Well, I made the statement just now that it could be considered in conference.

Mr. COLEMAN of Missouri. If the other body adopts it?

Mr. PERKINS. Yes, if the other body adopts it.

Mr. COLEMAN of Missouri. Well, I just wanted to point out to my friend, the gentleman from Pennsylvania, that if he withdraws his amendment, it is not going to be in conference unless a Member of the other body presents it and it is adopted.

Mr. PERKINS. That is correct.

Mr. COLEMAN of Missouri. I thank the gentleman.

Mr. HARRISON. Mr. Chairman, I ask unanimous consent to withdraw my amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The CHAIRMAN. The question is on the amendment recommended by the Committee on Science and Technology, as amended.

The Science and Technology Committee amendment, as amended, was agreed to.

The CHAIRMAN. Are there other amendments to title I?

AMENDMENT OFFERED BY MR. BROWN OF CALIFORNIA

Mr. BROWN of California. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BROWN of California: Page 18, line 24, insert after "State." the following: "The State plan and programs referred to in this section shall be prepared with adequate consultation with representatives of the professional mathematics and scientific communities as well as those organizations and agencies listed in section 604(b)."

Mr. BROWN of California (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. PERKINS. Mr. Chairman, will the gentleman yield to me?

Mr. BROWN of California. I am happy to yield to the chairman of the committee.

Mr. PERKINS. As I understand the amendment, it requires State educational agencies to consult with professional scientific and mathematical organizations and with businesses, museums, and other public and private agencies in planning the elementary and secondary education programs.

I support this amendment, but want to make clear that this only requires consulting with these organizations. I want to make sure that there is no requirement for approval by these organizations of any State plans.

In addition, I do not think we intend any burdensome Federal regulations to implement it. Is that not correct?

Mr. BROWN of California. The gentleman is absolutely correct. My whole purpose was merely to involve the representatives of the professional organizations in math and science, hopefully getting their volunteer efforts to help improve the teaching of math and science.

Mr. PERKINS. Mr. Chairman, in the circumstances, we accept the amendment.

Mr. SKEEN. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I am happy to yield to the gentleman from New Mexico.

Mr. SKEEN. Mr. Chairman, could we ask the gentleman, are there copies of the amendment available?

Mr. BROWN of California. I left a copy at the desk, but I have some additional copies.

Mr. SKEEN. Mr. Chairman, I thank the gentleman.

Mr. GREGG. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I am happy to yield to the gentleman from New Hampshire.

Mr. GREGG. It is my understanding, and I have not had a chance to read the amendment, I just had it put before me; but it is my understanding that it is not compulsory that the States in distributing the funds will have to consult with these agencies.

Mr. BROWN of California. No. There is nothing compulsory. It merely lists these organizations along with the other organizations already contained in the bill.

I discussed this with the distinguished gentleman from Pennsylvania earlier and he indicated no opposition to it.

Mr. GREGG. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. BROWN).

The amendment was agreed to.

AMENDMENTS OFFERED BY MR. ERLENBORN

Mr. ERLENBORN. Mr. Chairman, I offer amendments and I ask unanimous consent that they be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Clerk read as follows:

Amendments offered by Mr. ERLENBORN:

Page 2, beginning on line 14, strike out all of part A of title VI of the National Defense Education Act of 1958 as proposed to be added by the amendment through page 13, line 21; strike out the heading of part B on page 13, line 22; and redesignate the succeeding sections accordingly.

Page 24, beginning on line 9, strike out all of title II of the amendment through page 31, line 16; on page 2, lines 3 and 4, strike out the heading of title I of the amendment; and redesignate sections 101 through 107 of the amendment as sections 1 through 7 respectively.

Mr. ERLENBORN. Mr. Chairman, when I spoke a minute ago on an amendment that unfortunately was adopted, I said it was the first of three amendments. These are the other two and are being considered en bloc.

The first amendment addressed a very small program and the loss of that is really not critical. The adoption of these two amendments being considered en bloc can still accomplish the major purpose that I intended.

Mr. Chairman, this amendment, the first of the two amendments, would eliminate part A of title I, the $250 million program for grants to State and local State education agencies for elementary and secondary education.

My amendment is part of a series of amendments, as I say, and they are designed to increase the short-term supply of math and science teachers.

As I stated when I offered my first amendment, my goal is to have the final version of the bill consist of only title I, part B, at a total cost of $70 million. This amendment would strike part A of title I.

The second of the two amendments being considered en bloc strikes title II of the bill and thus eliminates the $100 million program for National Science Foundation grants for new engineering and science personnel funds.

This amendment is part of a series which are designed to increase the short-term supply of math and science teachers.

As I stated before, my goal is to have the final version consist of just title I, part B.

Mr. Chairman, I would hope that as my last amendment did not generate a long debate and, therefore, will not impose and did not impose on the time of the Members, who I know have spent a long day here on the floor already and would like to leave at an early hour, I would hope that we would have no further debate on these amendments and that they would merely be considered favorably and adopted.

□ 1840

Mr. PERKINS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, if this amendment were adopted, we will only affect a few teachers and a few school districts. We must keep part A if we are going to affect all school districts. We have in part A $250 million and we have all the school districts in the United States targeted.

To knock out the $250 million would just be killing this program dead. We would just be spinning out wheels here on the floor of the House today if we went along with the Erlenborn amendments. Not only does he do it to title I, but he does it to the science title which Mr. FUQUA will talk about.

We have the money here reaching all the districts, at least the grants to the States, with at least 75 percent passthrough to local school districts according to our title I allocations in local funds to be used for teacher training and retraining.

The gentleman from Illinois (Mr. ERLENBORN) wants to knock those provisions out of the bill.

What would be left? Just a little money for a few teachers and a few school districts in the country, and I do not think the Members of the Congress want to come here and spin their wheels in any such manner.

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. PERKINS. I yield to the distinguished gentleman from Florida.

Mr. FUQUA. I appreciate my good friend, the gentleman from Kentucky, yielding.

Mr. Chairman, I certainly rise in support of his position regarding the amendment offered by our friend, the gentleman from Illinois (Mr. ERLENBORN.)

In the title II provision we provide for matching funds that must either come from private sources or local or State funds. It funds money for the development of faculty and researchers in our colleges of engineering and math and science. It provides money for the improvement of the educational abilities of our community college faculty, instrumentation and computer accessibility that we talked about earlier today, and the precollege science and math, particularly as it relates to elementary school teachers and others that our good friend and colleague from New Hampshire has worked so hard on.

It is a very important part of the bill, and I think I agree that the adoption of this amendment would totally destroy the bill and the purposes that so many of us have worked so hard for.

I urge my colleagues to vote against the amendment.

Mr. PERKINS. Mr. Chairman, I would say in conclusion that I would think that all the Members of this body would want their districts to participate in this program. If the Erlenborn amendment is adopted, they would not be able to participate.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Illinois (Mr. ERLENBORN).

The amendments were rejected.

AMENDMENT OFFERED BY MR. FUQUA

Mr. FUQUA. Mr. Chairman, I offer an amendment.

The clerk read as follows:

Amendment offered by Mr. FUQUA: Page 2, line 7, insert "and Jobs" after "Education".

Mr. FUQUA. Mr. Chairman, this amendment changes the short title of the bill to conform with the other amendments that have been adopted, and I urge the adoption of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. FUQUA).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. FUQUA

Mr. FUQUA. Mr. Chairman, I offer one more technical amendment.

The Clerk read as follows:

Amendment offered by Mr. FUQUA: Page 6, line 9, and page 9, lines 5 and 6, strike out "section 624 of this title" and insert in lieu thereof "section 103 of the Emergency Mathematics and Science Education and Jobs Act".

Mr. FUQUA (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. FUQUA. Mr. Chairman, this is a technical amendment correcting a cross-reference in title VIII since the adoption of the Fuqua substitute earlier in the day.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. FUQUA).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. GREGG

Mr. GREGG. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GREGG: Page 4, line 1, strike out "The" and insert in lieu thereof "Subject to paragraph (3), the" and after line 23 insert the following new paragraph:

"(3) No State (including the District of Columbia and Puerto Rico) shall be allocated an amount which is less than one-half of 1 per centum of the remainder of the amount so appropriated (after meeting the requirements of paragraph (1)).".

Mr. GREGG (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New Hampshire?

There was no objection.

Mr. GREGG. Mr. Chairman, this amendment addresses the formula for the manner in which funds are distributed under the title I, section (a), part A of the bill, and it is an attempt to recognize the fact that the formula as presently structured does not apply evenly for small States throughout the country and, therefore, this amendment tries to redress that issue.

Mr. FUQUA. Mr. Chairman, I move to strike the last word and I rise in opposition to the amendment.

Mr. Chairman, as I understand the amendment, it would establish a minimum amount of one-half of 1 percent for each State that they could receive under the elementary and secondary formula grant program in part A.

According to the Congressional Research Service, this amendment would probably raise the allocation to 13 States, while all the other States' allocations would be decreased by about 3 percent. Under the current formula, even the smallest States will receive enough to operate the various teacher training activities through joint arrangements of local educational agencies and higher education institutions.

I think it is a good formula, and I would urge my colleagues to reject tampering with the formula that we already have. We provide funds allocated to all of the States and under this most of the States would receive a reduction in the amount that would be available to them.

I urge rejection of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Hampshire (Mr. GREGG).

The question was taken, and on a division (demanded by Mr. GREGG) there were—ayes 6, noes 17.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. GREGG

Mr. GREGG. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GREGG: Page 9, line 4, after the word "expenses" insert "and stipends".

Mr. GREGG (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New Hampshire?

There was no objection.

Mr. GREGG. Mr. Chairman, this amendment simply adds an additional term to page 9; it includes stipend along with expenses for teachers who are going to the summer institutions, my belief being that if you ask a teacher to go to a summer institute, you are basically taking away a period of the year when they would be earning income, most teachers needing that timeframe during which to earn income; and therefore I think in order to encourage teachers to participate in summer institutes we really ought to give the flexibility to the States to have the ability to pay them beyond the expenses which they incur in order to participate in those summer institutes.

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. GREGG. I yield to the gentleman from Florida.

Mr. FUQUA. I thank the gentleman for yielding.

I am trying to quickly look at the amendment. The gentleman used the word "stipend"; is that correct?

Mr. GREGG. That is correct.

Mr. FUQUA. How does the gentleman define what a stipend is in the amendment, and what is the extent of it?

□ 1850

Mr. GREGG. Mr. Chairman, I would define the term, "stipend," to mean some reasonable payment to the teachers in lieu of the teachers' having to go out and earn a salary during that period in the summer when most teachers do have to go and find a second job in order to supplement their incomes. I think the States should be left with a considerable amount of flexibility, however, in how they wish to handle this stipend issue for the summer institutes, because otherwise we are not going to be able to attract them to the summer institutes.

Mr. PERKINS. Mr. Chairman, will the gentleman yield to me for a question?

Mr. GREGG. I will certainly yield to the committee chairman for a question.

Mr. PERKINS. Mr. Chairman, assuming a State had a seminar at the State level, the State could pay all of those expenses, all actual expenses, under the present legislation. But the gentleman is proposing that, in addition to that, the State could pay a stipend or extra money to certain teachers to attend that institute; is that not what the gentleman is proposing?

Mr. GREGG. The gentleman is correct.

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. GREGG. I yield to the gentleman from Florida.

Mr. FUQUA. Mr. Chairman, let me ask: How does this change what has historically been the method of reimbursement for those teachers who attended summer institutes? By changing the word to stipend, how does that

change it where they have been reimbursed for expenses?

Mr. GREGG. Mr. Chairman, if I may address that in this way, I would anticipate that it goes beyond the issue of expenses. Expenses are the cost of going to the institute, the cost of food, and the cost of lodging at the institute. It does not include the time that is taken away from that teacher's ability to earn an extra income in the summer.

Mr. GOODLING. Mr. Chairman, will the gentleman yield?

Mr. GREGG. I yield to the gentleman from Pennsylvania.

Mr. GOODLING. Mr. Chairman, I believe this is probably similar to what we did under NBEA. I think this is similar to what was done under NBEA, and I think that is what the gentleman is talking about.

Mr. FUQUA. Mr. Chairman, if the gentleman will yield further, I was going to say that I think it does not create mischief, and I would be inclined to accept the amendment. If we do find that it is something that is out of the ordinary, then we may have to correct it in conference, but under that assumption—and I know the gentleman from New Hampshire has worked very hard on the bill and has been very interested in this—and based on the good faith explanation, I would be inclined to accept the amendment.

Mr. GREGG. Mr. Chairman, it is never my intention to create mischief.

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. GREGG. I yield to the gentleman from Illinois.

Mr. SIMON. Mr. Chairman, without agreeing with that last statement, I think what we do is two things: No. 1, we take a look at what the experience really was under NBEA, and, No. 2, we take a look at the possibility in conference of some kind of limitation.

I am a little concerned about an open-ended stipend provision, but it seems to me it would be within the confines and the limitations of the conference to restrict that. So I would, with some misgiving, frankly, be inclined to accept the amendment with the understanding that we take a look at it and work with the gentleman from New Hampshire and perhaps put a restriction on it in conference.

Mr. PERKINS. Mr. Chairman, if the gentleman will yield, we accept the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Hampshire (Mr. GREGG).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. SKEEN

Mr. SKEEN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SKEEN: Page 2, line 24, strike the "." after "levels" and add the following: ", and (3) to retain qualified mathematics and science teachers at the elementary and secondary education levels.".

Mr. SKEEN. Mr. Chairman, this is an addition of language on page 2, line 24, that serves to emphasize retention of these teachers, which is not fully, I think, spelled out or well-enough defined in the findings in the preamble of this bill.

This just adds a No. 3 section, and the language says: "to retain qualified mathematics and science teachers at the elementary and secondary education levels."

That is all it says. Due to the tremendous attrition we have in the school systems, particularly at these levels, retention, I believe, is as important as the recruitment and the training, and I think it should be mentioned in the findings. That is merely what this language does.

Mr. PERKINS. Mr. Chairman, if I understand the amendment, it adds another emphasis to the findings section of part A to retain qualified math and science teachers. Is that all it does?

Mr. SKEEN. Mr. Chairman, the gentleman is absolutely correct.

Mr. PERKINS. Mr. Chairman, we support the amendment.

Mr. SKEEN. Mr. Chairman, I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Mexico (Mr. SKEEN).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. GOODLING

Mr. GOODLING. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GOODLING: At the end of the bill, insert the following new title:

TITLE III—PRIORITY IN FOREIGN LANGUAGE INSTRUCTION

COMPREHENSION OF SCIENTIFIC AND TECHNICAL JOURNALS

SEC. 301. In any foreign language instruction program assisted with funds made available under this Act or under any amendment made by this Act, priority shall be given to courses of instruction which teach in a manner designed to provide a foundation for reading comprehension of scientific and technical journals in critical foreign languages.

Mr. GOODLING (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. GOODLING. Mr. Chairman, I believe I have the approval of the gentleman from Illinois (Mr. SIMON) on this.

What I am basically doing is this: I am saying that "in any foreign language instruction program assisted with funds made available under this act or under any amendment made by this act, priority shall be given to courses of instruction which teach in a manner designed to provide a foundation for reading comprehension of scientific and technical journals in critical foreign languages."

Mr. SIMON. Mr. Chairman, will the gentleman yield?

Mr. GOODLING. I am happy to yield to the gentleman from Illinois.

Mr. SIMON. Mr. Chairman, I think this is an acceptable amendment, and I will be pleased to support it.

Mr. GOODLING. Mr. Chairman, I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania (Mr. GOODLING).

The amendment was agreed to.

The CHAIRMAN. Are there additional amendments to title I?

If not, the Clerk will designate title II.

Title II of H.R. 1699 is as follows:

TITLE II—NATIONAL ENGINEERING AND SCIENCE PERSONNEL

SHORT TITLE

SEC. 201. This title may be cited as the "National Engineering and Science Personnel Act of 1983".

FINDINGS AND PURPOSES

SEC. 202. (a) The Congress finds that—

(1) technical, engineering, and scientific personnel are an integral part of the Nation's economic, strategic, and national security needs, and are necessary for any potential growth and development to provide for the Nation's international competitiveness;

(2) there currently exists a pressing need for trained technicians and engineers for the Nation's industry and defense, with particular concern for such high-technology fields as electronics, information technology, and energy, and a need for technicians and engineers who are able to understand critical foreign languages and read foreign technical journals;

(3) improving the understanding of science and mathematics by all citizens is a key means by which to increase the number of those desiring to pursue technical, engineering, and scientific careers, and it is a key means by which citizens may gain the information they must have in order to support education responsibly;

(4) the United States needs a comprehensive policy and commitment regarding the Federal role in technical, engineering, and scientific personnel;

(5) the availability and quality of graduate engineering researchers and faculty is currently declining;

(6) the Nation is failing to attract sufficient numbers of minorities and women in the technical, engineering, and scientific fields to take proper advantage of these human resources;

(7) the Nation now faces potential shortages in scientific as well as engineering and technical fields; and

(8) the creation of a pool of highly qualified new engineering, technical, and scientific personnel will lead to the creation of a significant number of new jobs in these fields which will strengthen the Nation's economy.

(b) It is the purpose of this title to provide a national policy for technical, engineering, and scientific personnel to provide a means for cost sharing by the private sector in training such personnel, and to encourage the creation of new engineering, technical, and scientific jobs.

POLICY

SEC. 203. (a) The Congress declares that it shall be the continuing policy of the United States to maintain an adequate supply of technical, engineering, and scientific personnel to insure the technological strength and security of the Nation. The Congress further declares that the President shall take all necessary actions to coordinate the various departments and agencies of the Federal Government in carrying out this policy, including (among other measures) actions to—

(1) identify the technical, engineering, and scientific human resource needs necessary for the well-being of the Nation;

(2) establish and maintain the necessary means for continually assessing the Nation's short- and long-term technical, engineering, and scientific human resource needs, including the need to maintain knowledge of foreign technical and scientific development, and to provide the policies and programs necessary to meet those needs;

(3) promote and provide leadership to increase understanding of science and mathematics by all citizens;

(4) promote, encourage, and provide leadership and coordination to the efforts of the public and private sector, including the appropriate professional societies, to establish such policies and programs to carry out the purposes of this Act;

(5) assist institutions of higher education and research in assuring the adequacy and merit of instruction, research, and numbers of qualified graduates in science and engineering; and

(6) encourage the support of the private sector in meeting the Nation's needs for research and development and for science, engineering, and technical personnel.

(b) The Congress further declares that the primary responsibility for developing policies for Federal support of research and development and of science, engineering, and technical personnel lies with the Office of Science and Technology Policy in the Executive Office of the President.

(c) Each Federal department and agency authorized to establish, or to cooperate with State and local governments or private sector organizations in establishing, programs and activities for the training and education of technical and engineering personnel as may be necessary for the directed missions of the department or agency involved, shall coordinate such programs and activities with the Office of Science and Technology Policy in the Executive Office of the President.

ESTABLISHMENT OF ENGINEERING AND SCIENCE PERSONNEL FUND

SEC. 204. (a) There is hereby established within the National Science Foundation a special Engineering and Science Personnel Fund (hereinafter referred to as the "Fund") to promote and develop the quality of the United States technical, engineering, and scientific personnel resources. The Fund shall be administered by the National Science Foundation. In administering the Fund, the National Science Foundation is authorized to expend moneys for grants for such research (related to education in mathematics, science, and engineering), fellowships, capital equipment, salaries, instrumentation, and other activities as are considered necessary in carrying out the purposes of this Act.

(b) In directing policy for the Fund, the National Science Foundation shall take into account the current status and predictions of supply and demand for trained personnel in each discipline or specialty.

(c) Moneys for grants from the Fund shall be expended through a system of matching grants with such other private or public sector funds as may be made available (including in-kind service or other resources), with the moneys provided from the Fund for any individual grant not to exceed one-half of the total cost of the program supported by such grant.

(d) The Fund is established only for a period of five fiscal years after the enactment of this Act; and the continuance of the Fund beyond such five-year period shall require the specific authorization of the Congress.

(e) The National Science Foundation shall report to the Congress regularly, but no less than once every two years, concerning the expenditure of moneys under the Fund.

PRIORITIES FOR USE OF FUND

SEC. 205. (a) The Engineering and Science Personnel Fund established in section 204 shall have as the principal focus of its activities the following priority areas:

(1) recruitment and retention of new engineering faculty;

(2) two-year and community college faculty and instructor development in high technology fields, such programs to include faculty development, instructional development, model instructional program costs, and instrumentation;

(3) development of programs of instructional instrumentation and systems for postsecondary technical, engineering, and scientific education, with special emphasis on computer accessibility;

(4) pre-college science and mathematics education and training, including programs to promote cooperation and exchange of resources and personnel with industry and other elements of the private sector;

(5) public understanding of science and mathematics;

(6) developing and disseminating instructional materials and resources for improvement of education in engineering, mathematics, and the sciences; and

(7) four-year college faculty and instructor development in high technology fields, such programs to include instructional development and instrumentation.

(b) Of the amounts available for section 204 of this Act, funds shall be made available for the priorities established in subsection (a) as follows:

(1) not less than 20 per centum shall be expended for subsection (a)(2);

(2) not less than 15 per centum shall be expended for subsection (a)(3); and

(3) not less than 15 per centum shall be expended for subsection (a)(4).

COORDINATION OF ACTIVITIES; REPORTS

SEC. 206. (a) Pursuant to title IV of the National Science and Technology Policy, Organization, and Priorities Act of 1976, the Office of Science and Technology Policy shall have responsibility for coordinating the activities of the Department of Education and the National Science Foundation under this Act, except for activities under part A of title VI of the National Defense Education Act of 1958 (as added by section 102(a) of this Act).

(b) Within one year from the date of enactment of this Act, the National Science Foundation and the Department of Education shall provide to Congress a joint report on their activities under this Act. Such report shall be revised periodically, but no less than every two years for the duration of the programs and activities authorized in this Act.

AUTHORIZATION OF APPROPRIATIONS

SEC. 207. There is hereby authorized to be appropriated to the Engineering and Science Personnel Fund to carry out the purposes of this title the sum of $100,000,000 for each of the fiscal years 1984, 1985, 1986, 1987, and 1988.

AMENDMENT OFFERED BY MR. FUQUA

Mr. FUQUA. Mr. Chairman, I offer an amendment which is at the desk and identified as No. 7.

The Clerk read as follows:

Amendment offered by Mr. FUQUA: Page 31, line 1, strike out "have responsibility for coordinating the activities of" and insert in lieu thereof "recommend and review the coordinating activities between".

Mr. FUQUA. Mr. Chairman, this amendment clarifies the role of the Office of Science and Technology policy in coordinating the activities of the National Science Foundation and the postsecondary activities of the Department of Education under the bill. The amendment makes it clear that the role of the OSTP is to make recommendations and review those recommendations and to assure that the agencies are working together.

I do not think there is any disagreement on the amendment.

Mr. PERKINS. Mr. Chairman, will the gentleman yield?

Mr. FUQUA. I yield to the chairman of the committee.

Mr. PERKINS. Mr. Chairman, we feel that this is a good amendment and improves the bill.

Mr. GREGG. Mr. Chairman, will the gentleman yield?

Mr. FUQUA. I am happy to yield to the gentleman from New Hampshire.

Mr. GREGG. Mr. Chairman, this really does more than clarify, it seems to me. Basically, it changes the thrust of coordinating activities from one of being a primary responsibility of OSTP to being one of recommendations and a lower level of responsibility, does it not?

Mr. Chairman, if seems to me it does more than clarify. It seems to me it is actually changing the responsibility of OSTP as to how it deals with coordinating activities. Basically, under the old language, OSTP was responsible for the action, and under this new language now OSTP just becomes a reviewing agency versus having any authority to go in and take primary responsibility.

Mr. FUQUA. Under the act of OSTP, they are more a coordinating and advisory rather than a managing agency because it is in the Executive Office of the White House. I think,

though, that their activities and persuasive voice carry great weight when they are trying to coordinate activity between two agencies.

We felt that this would better work to satisfy both the National Science Foundation and the Department of Education, and it still does involve them. The gentleman expressed concern in the committee meeting, and I might say that this gentleman has concern. I think that this language, though, will take care of coordinating those activities between the two agencies and make sure that there is not duplication and overlapping.

Mr. GREGG. Mr. Chairman, if I may further inquire, if NSF and the Department of Education reach loggerheads over how a workshop should be run and the summer institutes should be run, it does not look to me as if OSTP could step in and say, "Well, NSF, your line of authority is here, and, DOE, your line of authority is here." It looks to me as if OSTP can only come in and recommend.

Mr. PERKINS. Mr. Chairman, will the gentleman yield to me?

Mr. FUQUA. I yield to the gentleman from Kentucky.

Mr. PERKINS. In that instance, Mr. Chairman, it would be the function of the President, and I think the gentleman would agree that if two agencies have a dispute, I do not see a thing in the world wrong with respecting the Cabinet level of the Department of Education. I think the gentleman's amendment is a very good amendment and would accomplish what the gentleman wants done.

Mr. GREGG. Mr. Chairman, I have reservations about it because I think basically what we are doing is weakening OSTP's authority in addressing issues of conflict between NSF and DOE, and I believe, OSTP being the science arm of the executive branch has the logical ability to settle those type of disputes. If the chairman of the committee can represent to me that this is not a weakening amendment, then I would be happy to support it.

Mr. FUQUA. Mr. Chairman, I do not believe it is a weakening amendment. I say that it qualifies, I think, better the role as contained in the Organic Act of the OSTP and its coordinating role among the various Federal agencies. After all, they are not a line-operating agency. They do not operate agencies.

□ 1900

But they do try to coordinate and give advice and counsel, and the fact that it comes from the Executive Office of the President I think is significant impetus to show the strength and muscle, that these agencies should listen and heed their advice.

Mr. GREGG. Well, is it the intention of the Chairman that in a dispute between NSF and DOE, OSTP would be settling that dispute?

Mr. FUQUA. I think in cases of program conflicts that might develop at the top, certainly OSTP would be involved, and possibly OMB involved, and even maybe the President involved. So there are several avenues of resolution of those problems. I share the gentleman's concern that there not be bickering, and so on, and I might further point out that I am sure our Committee on Science and Technology and the Committee on Education and Labor would look very carefully at this and bring those agencies in and bump heads, to try to get these things resolved, should that occur. I do not think it will, and I certainly hope that it will not.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. FUQUA).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. LUJAN

Mr. LUJAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. LUJAN: At the end of the bill add the following new title:

TITLE III—ADDITIONAL PROGRAMS

SHORT TITLE

SEC. 301. This title may be cited as the "National Technical Jobs Creation and Excellence in Technical and Scientific Education Act of 1983."

FINDINGS AND PURPOSES

SEC. 302. (a) The Congress finds that—

(1) technical, engineering, and scientific personnel are an integral part of the Nation's economic, strategic, and national security needs, and are necessary for any potential growth and development to provide for the Nation's international competitiveness;

(2) there currently exists a pressing need for trained technicians and engineers for the Nation's industry and defense, with particular concern for such high technology fields as electronics, information, technology, and energy;

(3) the United States needs a comprehensive policy and commitment regarding the Federal role in engineering and scientific personnel;

(4) the Nation is failing to attract sufficient numbers of minorities and women in the technical, engineering, and scientific fields to take proper advantage of these human resources;

(5) the Nation now faces potential shortages in scientific as well as engineering and technical fields; and

(6) the creation of a pool of highly qualified new engineering, technical, and scientific personnel will lead to the creation of a signficant number of new jobs in these fields which will strengthen the Nation's economy.

(b) It is the purpose of this title—

(1) to stimulate science and mathematics opportunities in elementary and secondary schools of the States;

(2) to stimulate increased public interest and support of the role of sciences, mathematics, and technology;

(3) to encourage student and teacher interest in the sciences, mathematics, and engineering fields; and

(4) to encourage the creation of new engineering, technical, and scientific jobs.

POLICY

SEC. 303. (a) The Congress declares that it shall be the continuing policy of the United States to maintain an adequate supply of technical, engineering, and scientific personnel to ensure the technological strength and security of the Nation. The Congress further declares that the President shall take all necessary actions to coordinate the various departments and agencies of the Federal Government in carrying out this policy, including (among other measures) actions to—

(1) identify the technical, engineering, and scientific human resource needs necessary for the well-being of the Nation;

(2) establish and maintain the necessary means for continually assessing the Nation's short- and long-term technical, engineering, and scientific human resource needs and to provide the policies and programs necessary to meet those needs;

(3) promote, encourage, and provide leadership and coordination of the efforts of the public and private sector, including the appropriate professional societies, to establish such policies and programs as are necessary to carry out the purposes of this title;

(4) assist institutions of higher education and research in assuring the adequacy and merit of instruction, research, and numbers of qualified graduates in science and engineering; and

(5) encourage the support of the private sector in meeting the Nation's needs for research and development for science, engineering, and technical personnel.

(b) The Congress further declares that the primary responsibility for developing policies for Federal support of research and development and of science, engineering, and technical personnel lies with the Office of Science and Technology Policy in the Executive Office of the President.

(c) Each Federal department and agency authorized to establish, or to cooperate with State and local governments or private sector organizations in establishing, programs and activities for the training and education of such technical and engineering personnel as may be necessary for the directed missions of the department or agency involved, shall coordinate such programs and activities with the Office of Science and Technology Policy in the Executive Office of the President.

PRESIDENTIAL PROGRAM FOR PREPAREDNESS IN HIGH-TECHNOLOGY

SEC. 304. (a) There is established within the Foundation a Presidential Program for Preparedness in High-Technology to stimulate public, teacher, and student interest and preparedness for Technology Development. Such program shall be administered by the Director who is authorized to make grants to appropriate recipients for the purposes of—

(1) training education in teaching techniques that communicate enthusiasm for and interest in the sciences, mathematics, and engineering;

(2) encourage a public outreach effort by means of radio and television stations, using programming that will stimulate interest among the general public, students, and teachers in the fields of science, mathematics, and engineering; and

(3) assessing local and State skill requirements in technical areas.

(b) The recipients of such grants shall include—

(1) postsecondary institutions, such as community colleges;

(2) nonprofit research training and development institutions or corporations; and

(3) school systems in collaboration with other recipients under this subsection.

(c) If the amount of the grant to any recipient exceeds $25,000, the Director shall ensure that the recipient has received or will receive a matching grant from non-Federal sources in an amount equal to or exceeding that excess.

PRESIDENTIAL SCIENCE AND MATHEMATICS IMPROVEMENT PROGRAM

SEC. 305. (a) There is established within the Department of Education a Presidential Science and Mathematics Improvement Program to improve the qualification of teachers of precollege science and mathematics. Such program shall be administered by the Secretary of Education who is authorized to make grants to the States for the purposes of—

(1) upgrading the curriculum of elementary and secondary schools in the State to assure better education in mathematics and the sciences for the students;

(2) supporting the appropriate State certification boards in establishing the appropriate credentials for elementary and secondary school teachers of science and mathematics in the State; and

(3) acquiring equipment to assist in the teaching of science and mathematics in elementary and secondary schools in the State.

(b) Such funds shall not be granted to a State unless the State—

(1) has evaluated the present status of science and mathematics in the elementary and secondary schools of the State;

(2) has set goals for improving the programs in the sciences and mathematics in the elementary and secondary schools of the State;

(3) continues to show progress in attaining the goals under the above paragraph;

(4) includes as a goal increasing the percentage of women and minority students in science and mathematics to reflect the percentage in the general population;

(5) demonstrates that the proposed curriculum reflects the current demands for technical education; and

(6) agrees to continue the program with only State funding five years after the first Federal grant is received.

AVAILABILITY OF FUNDS

SEC. 306. Funds appropriated pursuant to authorizations of appropriations in parts B and C of title VI of the National Defense Education Act of 1958, section 107 of this Act, and section 207 of this Act may, as provided in the appropriation Act, be made available for the purposes of carrying out this title. Of the amount so available, one-half shall be available for purposes of section 304, and one-half shall be available for purposes of section 305.

DEFINITIONS

SEC. 307. For the purposes of this title—

(1) the term "Director" means the Director of the National Science Foundation;

(2) the term "elementary school" has the same meaning given that term under section 595(a)(7) of the Education Consolidation and Improvement Act of 1981;

(3) the term "Foundation" means the National Science Foundation;

(4) the term "local educational agency" has the same meaning given that term under section 595(a)(4) of the Education Consolidation and Improvement Act of 1981;

(5) the term "secondary school" has the same meaning given that term under section 595(a)(7) of the Education Consolidation and Improvement Act of 1981;

(6) the term "State" means each of the several States, the District of Columbia, and the Commonwealth of Puerto Rico;

(7) the term "State Commission" means the State Commission on Excellence in Mathematics and Science established in accordance with title II of this Act; and

(8) the term "State educational agency" has the meaning given that term under section 1001(k) of the Elementary and Secondary Education Act of 1965.

Mr. LUJAN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New Mexico?

There was no objection.

Mr. LUJAN. Mr. Chairman, the growing competition from foreign countries, such as Japan, in the technological marketplace has been the subject of national concern recently.

Clearly technology will be the basis of most of the jobs in the future. There is a stunning volume of evidence that we are not going to have enough technically trained people in the future to remain competitive in the international technological marketplace. The legislation before us today proposes to address this problem. I commend the bill's sponsors for this. However, the variety of programs in this bill are focused on training teachers, whether it is retaining existing teachers or encouraging students to go into teaching, or providing equipment for teachers to use in the classroom; it is focused on the teachers. I must recognize the Science and Technology Committee amendment that would increase postsecondary students to develop technical skills.

However, I am deeply concerned that the bill generally ignores the students. It assumes that if a teacher is trained in science and math, that the teacher will be enthusiastic about the subject and communicate that enthusiasm to the students. I believe that something more must be done. Something more must be done to develop teaching techniques that generate student interest. Something more must be done to generate real interest in science and mathematics among the students, among the teachers, and among the general public. We must get people interested in technology if this country will continue to be the leader in technological development that the United States has been throughout its history. Genuine interest and enthusiasm is a key element of achieving excellence in any field. My amendment is intended to insure U.S. technological excellence in the future by generating interest in science and math now among our younger students. In summary, I believe that we really need to get the kids motivated at the elementary and secondary school level.

Therefore, my amendment establishes two programs. The first program is intended to generate interest in science and mathematics. NSF would grant money to: First, develop teaching techniques that get the students' interest and then train teachers in these techniques; Second, develop public outreach efforts, such as radio and televison programs to get the kids, their parents, and their teachers interested; and third, conduct assessments of the local and State market for technical skills so that the kids will realize there are good job opportunities for people with a technical education.

The public outreach efforts are an important part of this concept. Public television and radio programs have become the major vehicle for informing the public. For example, last year over 14 million households watched PBS science programs. Programs like "NOVA" and the "Children's Television Workshop" science series have been very successful.

The recipients of these NSF grants would be: First, postsecondary institutions such as community colleges; Second, nonprofit research and training organizations; and third, school systems in collaboration with one of the other two. Experience has shown that community colleges and vocational education schools are most flexible in responding to shifts in the local job market, and can provide local industries with appropriately trained technical workers. This program is an extension of the language in section 205 of the Fuqua amendment that established that "public understanding of science and mathematics" and established that "developing and disseminating institutional materials and resources for improvement of education" shall be two of the seven priorities for use of the engineering and science personnel fund.

The second program established by my amendment would allow the Department of Education to provide grants to States for the purposes of upgrading their curriculum in the elementary and secondary schools, and in reexamining the requirements for certification of science and mathematics teachers.

Approximately 7 percent of full-time teachers of science and mathematics currently teaching have a provisional or emergency certificate. About 10 percent of newly employed teachers of science and mathematics are not certified. We do not know how many unqualified or minimally qualified teachers there are. Certainly, this situation needs to be reexamined by the State school systems. Likewise, we have seen massive amounts of evidence that the curriculum in U.S. schools in science and mathematics is not comparable to

Japan, England, France, Russia, Germany, and other countries. My amendment is intended to make the States aware of the Federal concern and priority, but to allow the State school systems to determine themselves how to improve their science and math education. We have seen enough of the Federal Government telling the States how to do everything. I believe the State and local governments know what to do to resolve these concerns. This program will result in a stronger diversity of approaches.

These two programs will be included in the overall NSF and Department of Education authorization in this bill.

Mr. Chairman, I ask my colleagues to support me in this amendment.

Mr. GOODLING. Mr. Chairman, will the gentleman yield?

Mr. LUJAN. I yield to the gentleman from Pennsylvania.

Mr. GOODLING. I am glad that the gentleman reemphasizes what I believe is already in the legislation. I believe both of the gentleman's amendments are covered in the legislation. For instance, in title II, they are allowed, for instance, to use the money for public understanding of math and science. Another portion of the bill, after meeting the needs of teachers in the school district or local education agency for the programs described in paragraph 2, then you can use it for any other activity, to modernize, expand or improve instructional programs in mathematics and science in the school district of that agency. So I think the gentleman is reemphasizing what perhaps we did not emphasize but that we do have contained in the legislation.

Mr. FUQUA. Mr. Chairman, I rise in opposition to the amendment.

I think the gentleman from Pennsylvania summed it up. In the two titles that we have, we outline many of the purposes that are proposed by the gentleman from New Mexico, who is a member of our committee, and some of it raises some questions probably more than it answers. I know that the amendment is well intended; but I think the current bill in its purposes and the outline of the program is much more specific and in outlining a broad program that is contained in the amendment offered by our friend from New Mexico.

I would urge the defeat of the amendment.

Mr. PERKINS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I well realize that the gentleman from New Mexico (Mr. LUJAN) has offered this amendment in the best of faith, thinking that he would improve the bill. But I would certainly oppose the amendment because all of these activities that Mr. LUJAN mentioned are already covered in the two titles of the bill but in a more focused way. And to add a new section at the end will be duplicative and confusing, and I am afraid it will distort many of the good provisions of the bill. So, naturally, I am opposed to the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Mexico (Mr. LUJAN).

The amendment was rejected.

The CHAIRMAN. Are there additional amendments to the bill?

Mr. BOLAND. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I have and continue to strongly support Federal assistance to improve science and math education. The Committee on Appropriations has long supported the science education activities of the National Science Foundation. In fact, it has been the HUD-Independent Agencies Subcommittee that, with the leadership of the distinguished gentleman from Florida, Mr. FUQUA, and the Science and Technology Committee, over the years has kept the science education program going.

For 2 years, the administration tried to phase out the science education program by reducing the funding requests. I am encouraged that it now appears the administration recognizes that a problem exists. But during those 2 years, it was the HUD-Independent Agencies Subcommittee and the Science and Technology Committee that recommended funding above the administration's request to keep the science education program alive.

I support the effort to improve science education in this country. I recognize that problems regarding the quality and quantity of science and math education do exist. Finding a solution to this problem will be difficult. There are no easy solutions. But I am concerned with the division of authority between the Department of Education and the National Science Foundation. It is to everyone's best interest that a tug-of-war between these two agencies does not exist, and I fear it. I for one intend to closely monitor this situation to make sure that it does not happen.

The CHAIRMAN. The question is on the Committee amendment in the nature of a substitute, as amended.

The Committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

□ 1910

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 1310) to provide assistance to improve elementary, secondary, and postsecondary education in mathematics and science; to provide a national policy for engineering, technical, and scientific personnel; to provide for cost-sharing by the private sector in training such personnel; and for other purposes, pursuant to House Resolution 109, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the Committee amendment adopted by the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time.

MOTION TO RECOMMIT OFFERED BY MR. ERLENBORN

Mr. ERLENBORN. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentlemen opposed to the bill?

Mr. ERLENBORN. In its present form, I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. ERLENBORN moves to recommit the bill, H.R. 1310, to the Committee on Education and Labor and to the Committee on Science and Technology.

The SPEAKER. Without objection, the previous question is ordered on the motion to recommit. There was no objection.

The SPEAKER. The question is on the motion to recommit.

The motion to recommit was rejected.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. FUQUA. Mr. Chairman, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 348, nays 54, not voting 31, as follows:

□ 1920

The Clerk announced the following pair:

On this vote:

Mr. Wirth for, with Mr. McDonald against.

Mr. SPRATT changed his vote from "nay" to "yea."

So the bill was passed.

The result of the vote was announced as above recorded.

The title of the bill was amended so as to read: "A bill to provide assistance to improve elementary, secondary, and postsecondary education in mathematics and science; to provide a national policy for engineering, technical, and scientific personnel; to provide cost sharing by the private sector in training such personnel; to encourage creation of new engineering, technical, and scientific jobs; and for other purposes."

A motion to reconsider was laid on the table.

□ 1930

AUTHORIZING CLERK TO MAKE CORRECTIONS IN ENGROSSMENT OF H.R. 1310

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that, in the engrossment of the bill, H.R. 1310, the Clerk be authorized to correct punctuation, spelling, numbering, and references, and to make such other necessary corrections to reflect the actions of the House on that bill.

The SPEAKER pro tempore (Mr. FEIGHAN). Is there objection to the request of the gentleman from Texas?

There was no objection.

HOUR OF MEETING ON TOMORROW

Mr. WRIGHT. Mr. Speaker, if I might have the attention of the membership, this next request might be a matter of interest to my colleagues.

Mr. Speaker, I ask unanimous consent that when the House adjourns today, it adjourn to meet at 10 a.m. on tomorrow, Thursday, March 3, 1983.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

Mr. WALKER. Reserving the right to object, Mr. Speaker, I reserve the right to object to ask the distinguished majority leader just what the necessity for the time change may be. It is going to interfere with some committee schedules. It is going to interfere with an awful lot of plans that Members may have made.

I would appreciate knowing just what the purpose for advancing the time might be and I am glad to yield to the majority leader.

Mr. WRIGHT. At the request of the majority and minority members of the Rules Committee, I am making this unanimous-consent request, the reason being that on tomorrow we shall take up the supplemental appropriations bill. It has been granted a rule which permits a total of 6 hours of debate, 2½ hours of general debate and then four amendments would be made in order under the rule and the amount of time allotted for debate on the four amendments, together with the amount of time allotted for general debate, comes to a total of 6 hours.

Now, if we wait until 11 o'clock to come in on tomorrow and adopt the rule and if all the time is consumed in the general debate and on the various amendments and if recorded votes are ordered on each of the amendments, we could quite well find ourselves late tomorrow concluding the bill.

Therefore, at the request of the minority, as well as the majority on the Rules Committee, and with the compliance and agreement of the gentleman from Mississippi (Mr. LOTT) and the distinguished minority leader, the gentleman from Illinois (Mr. MICHEL), I am making the unanimous-consent request that we come in at 10 o'clock in order that we may complete our work tomorrow at a reasonable hour and Members may complete their schedules.

Mr. WALKER. Further reserving the right to object, do I understand that when these amendments come to the floor that they will not then come to the floor under the 5-minute rule,

as normally we would expect to consider amendments on the floor?

I yield to the gentleman.

Mr. WRIGHT. Under the rule recommended by the Rules Committee, and to be adopted tomorrow, presumably, by the House, if it is adopted, there are four amendments made in order. If I am not mistaken, each of two is permitted 1 hour of general debate, equally divided between the two sides. Each of the other two would be permitted 30 minutes of general debate, equally divided between the two sides, and the total time of debate on the amendments and on the bill itself would come to 6 hours. It is for that reason that I was requested to make this unanimous consent request.

Mr. WALKER. Further reserving the right to object, I guess the answer to my question then is yes, we are not going to permit the amendments to be considered under the 5-minute rule under the rules adopted by the committee.

Well, given the majority leader's assurance that this has been checked with the minority and his explanation, I appreciate the explanation.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

PERSONAL EXPLANATION

Mr. FORD of Michigan. Mr. Speaker, I was called away from the floor at the time of the vote on the bill just passed. Had I been here, I would have voted for the bill.

I wish to have the RECORD show that had I been able to return to the floor in time to cast my vote, I would have voted for passage of the bill.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 1718, EMERGENCY APPROPRIATIONS, 1983

Mr. BONIOR of Michigan, from the Committee on Rules, submitted a privileged report (Rept. No. 98-16) on the resolution (H. Res. 113) providing for the consideration of the bill (H.R. 1718) making appropriations to provide emergency expenditures to meet neglected urgent needs, to protect and add to the national wealth, resulting in not make-work but productive jobs for women and men and to help provide for the indigent and homeless for the fiscal year 1983, and for other purposes, which was referred to the House Calendar and ordered to be printed.

GENERAL LEAVE

Mr. WEBER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and to include therein extraneous material on the subject of the special order today by the gentleman from Illinois (Mr. CORCORAN).

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

WEINBERGER'S REJECTION OF STRATEGIC COOPERATION CONTRARY TO OUR NATIONAL INTEREST

(Mr. LANTOS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. LANTOS. Mr. Speaker, a distinguished group of highly respected generals and admirals—leaders who have given a lifetime of service dedicated to our Nation's security—are publicly calling on the President to renew the strategic cooperation between the United States and Israel, thus enhancing the security of the West.

The first beneficial consequence of this strategic cooperation would be the United States obtaining an invaluable spectrum of military knowledge learned by Israel last year. This crucial military intelligence was obtained in full-scale combat involving scores of both American and Soviet weapons systems. It could save the United States billions of dollars in military expenditures and spare untold numbers of American lives.

Secretary Weinberger's rejection of the Israeli offer to share their priceless data is ill advised and contrary to our national interest.

I am proud to stand with our distinguished generals and admirals in calling on President Reagan to reverse the Weinberger decision and I urge all my colleagues to join me in this effort.

Text of military leaders' letter:

DEAR MR. PRESIDENT: As former members of our country's military and naval services, we are taking the liberty of addressing you directly on a national defense matter of great concern to us as private citizens.

Only once before in our nation's history have large numbers of senior retired officers publicly offered advice to their Commander in Chief. On January 21, 1979, alarmed by the then Administration's apparent complacency about rising Soviet military strength and geopolitical gains, many of us wrote your predecessor to express our views. It was gratifying to find that our concerns were reflected on November 4th, 1980, in the mandate which the people gave you to rearm America and to challenge Soviet aggression. The first two years of your Administration have proven the sincerity of your personal beliefs and expressed intention of restoring the security of the United States and the free world.

We are troubled, however, that the profound military significance of the decisive defeat of Soviet arms in Lebanon is being obscured by the political turmoil surrounding Israel's armed intervention. We believe that the victory of Israeli-modified American weapons and tactics over those of the Soviet Union presents the free world with a tremendous opportunity to reduce the impact of Russia's extraordinary growth in tactical forces and battlefield technology.

Despite denials in some quarters, it is clear to us that the Israelis have made major breakthroughs in conventional and electronic weaponry designed to overwhelm and destroy Soviet-made weapons systems. Advanced, battle-proven technology and tactics, as deployed by our Middle East ally, offer a unique opportunity to diminish the present quantitative superiority of Soviet forces in Europe. These advances are in the areas of anti-armor, missile site suppression, and aerial combat, as well as command, control and communications (C^3):

A modified 105mm shell which pierced the honeycomb armor of the formidable Soviet T-72 main battle tank;

Highly advanced Electronic Counter Measures (ECM) and strike techniques which neutralized and destroyed Syrian SA-6, SA-8 and SA-9 Soviet-made missile arrays without loss;

Enhanced air-to-air missilery and other aerial ECM and tactics which resulted in an unprecedented combat kill ratio of at least 85-0 against Soviet aircraft; and

A unique (C^3) ability to coordinate air, land and sea operations down to the unit level.

This combination of combat-proven high technology and tactics employed under remarkable Israeli generalship, together with new NATO arms technology and targeting systems already under development, could conceivably revolutionize the overall U.S. defense posture and offers exciting prospects for arms control an disarmament negotiations. Furthermore, the adoption of these modern, advanced technologies could make a favorable impact upon future defense costs and the national budgets of the United States and our allies.

An enhanced defense for NATO forces, achieved through the incorporation of the lessons of the war in Lebanon, raises the intriguing possibility of reducing the reliance on escalation to tactical nuclear weapons because of conventional battlefield inferiority.

The entire Soviet "Wave Theory" of advance in the Central Front of NATO is based upon swift movement of mass formations of armor and infantry, closely supported by Warsaw Pact air, all protected by integrated mobile missile air defense systems. If Pact tanks can be knocked out with unique penetrating shells, if SAM sites can be neutralized and destroyed in large numbers, and if their aircraft can be shot down in a virtual Turkey Shoot, then established Soviet military doctrine comes into question.

But lest the free world relax and congratulate itself on the recent victory of Israeli-manned American arms over those of the Russians, the crushing defeat of the Soviet-equipped PLO and Syrians in Lebanon should be recognized as a possible harbinger of future Russian aggression.

According to the best unclassified intelligence, the initial Soviet reaction to their losses was to blame Syrian manpower for ineptitude. Neither Soviet military doctrine nor equipment inadequacies were considered as factors. There is now reason to believe that the Soviets are no longer so certain.

If the free world doubts the actuality or the significance of these startling advances in weaponry and tactics, Moscow cannot afford to. On an issue so fundamental to

their aggressive designs, the Soviets must know whether or not their military doctrine and weaponry are flawed.

Mr. President, if this supposition is correct, the Soviets will be tempted to test their doctrine and weaponry under combat conditions—and soon.

Implementation of these plans may have already begun. The ominous replenishment of war stocks in Syria includes the construction of three bases for SAM-5 anti-aircraft missiles and the further introduction of Soviet technicians. The SAM-5—which rings Moscow itself—has never before been placed outside the Soviet Union.

Mr. President, it ill behooves military men publicly to comment upon purely political matters. However, the current strained relations between Washington and Jerusalem do not augur well for utilizing what you yourself have called "Recognizing the Israeli Asset" in your Washington Post article of August 15, 1979: "* * * the paramount American interest in the Middle East is to prevent the region from falling under the domination of the Soviet Union. * * * Israel has the democratic will, national cohesion, technological capacity and military fiber to stand forth as America's trusted ally . . . Therefore, it is foolhardy to risk weakening our most critical remaining strategic asset."

For example, Israeli ports and bases would be open instantly to U.S. forces in the event of a serious strategic threat to the Middle East. Israel constitutes the only U.S. ally capable of immediate parry to a serious thrust against free world interests in this theater. And, Israel's continued sharing of vital intelligence on Soviet operations constitutes the other essential element of U.S. security in the Middle East.

Your 1979 views have proven prescient indeed, Mr. President. We concur in your assessment of our ally's "* * * geopolitical importance as a stablizing force, as a deterrent to radical hegemony and as a military offset to the Soviet Union." Therefore, your present initiative on the Middle East must carefully consider the Israeli requirement of strategic depth for her own security, lest our ally be transformed from a strategic asset into a liability.

We have every confidence, Mr. President, that transitory political strains will not be allowed to detract from the fundamental congruence of strategic interests cemented by a common heritage of Western values and democratic ideals.

Mr. President, we therefore urge you to revitalize the strategic cooperation between the United States and Israel, thereby enhancing the safety and well-being of the free peoples of the world.

Sincerely and very respectfully,

COLEMAN INTRODUCES LEGISLATION TO REDUCE THE PRICE OF NATURAL GAS TO CONSUMERS

(Mr. COLEMAN of Missouri asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. COLEMAN of Missouri. Mr. Speaker, people in Missouri and throughout the Nation are justifiably upset over the dramatic increases we have been seeing in natural gas prices. Pipelines are buying expensive deep-well and imported gas, while readily available domestic supplies at much lower prices go begging for buyers. There is a surplus of natural gas. Any student of supply and demand can tell you that prices should be coming down. Yet natural gas price increases follow one after the other, shooting out of control like a runaway freight train. Is it any wonder that people are asking Congress to put on the brakes?

Today I am reintroducing legislation designed to correct these problems and assure more reasonable gas prices for consumers. This bill, the Natural Gas Price Relief and Market Correction Act, has two main features. First, it would prevent wellhead natural gas prices from rising above the October 1, 1982, level for 2 years. Second, the bill requires pipelines to use the cheapest gas they have on contract first. Natural gas contracts would be amended so pipelines could not be forced to pay penalties—"take or pay" charges—for not taking delivery of higher priced gas. And the savings from these changes would be passed directly on to consumers.

The Natural Gas Price Relief and Market Correction Act sweeps away all the contract restrictions that have skewed the natural gas market. It forces gas producers to live in the real world of what consumers can pay. It puts producers and pipelines at risk, instead of always leaving it to consumers to foot the bill.

Step-by-step, here is how my bill would affect producers, pipelines, distribution companies, and consumers:

Today, pipeline companies figure out how much gas they need each day. The manager looks at the gas contracts the company has, and takes gas first from the high-priced suppliers who have take-or-pay clauses in the contracts, since the pipeline must pay for that gas anyway. If they need any more gas, then they take it from lower priced sources. Under my bill, the pipeline companies look at all the contracts they have signed, and start taking delivery of the cheapest gas first, until the companies have all the gas they need that day.

Today, the Natural Gas Policy Act allows producers to charge very high prices because take-or-pay clauses force pipelines to pay for the gas even if it is not needed. Under my bill, producers charging the highest prices would find that pipeline companies were not buying their gas, since pipelines would be able to meet all of their needs with less expensive supplies. Pipelines would be relieved of take-or-pay clauses because each natural gas contract would be deemed to include a volume adjustment option allowing pipelines to adjust, without financial penalty, the amount of gas they buy under any contract.

Today, pipeline companies are not required to make any effort at bringing prices down. Under my bill, the pipeline company must file papers with the Federal Energy Regulatory Commission explaining how it is using this new contract option to reduce gas prices.

Today, the higher and higher prices pipelines pay for gas are passed on to distribution companies, who add them to your heating bill as a purchased gas adjustment. Once my legislation is enacted, you will be able to compare recent gas bills with older ones and see exactly how much gas prices are coming down. The pipelines are required to report the cost savings to the Federal Energy Regulatory Commission so that they can be passed directly on to you.

Today, pipelines pass higher gas costs through to consumers without any penalty. Under my bill, if a pipeline took delivery of higher priced gas instead of cheaper gas, it would have to pay the difference itself rather than passing the extra cost on to consumers.

Today, producers are not very interested in renegotiating contracts to lower prices. Once my bill is enacted, these producers would not be able to earn any money unless they lower the price they are charging for their natural gas, so they are likely to want to renegotiate their contracts.

Preventing wellhead prices from rising above the October 1982 level for 2 years will give consumers a clear and much-needed assurance that the situation will not continue to deteriorate. Everyone involved—producers, pipelines, distributors, and consumers—needs to know that Congress is serious about straightening out this mess and lowering natural gas prices, and that we will take decisive action to do it.

Already this winter is slipping by. We need to act. Americans must not be forced to face another cold and bitter winter without hope of relief on their heating bills. They will not stand for it. This Congress must not allow it.

THE SOCIAL SECURITY RESCUE BILL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. FORD) is recognized for 5 minutes.

● Mr. FORD of Michigan. Mr. Speaker, the Ways and Means Committee late yesterday approved a provision of the social security rescue bill that will place newly hired Federal workers under social security.

I feel it is important to send a message to current Federal workers that this action in no way affects the integrity of the civil service retirement system. We must assure our civil servants that we are not putting their futures in jeopardy.

The administration has proposed profound changes in the civil service retirement system far beyond social

security coverage of new Federal employees. If enacted into law, these changes would affect the character of the Federal work force for decades to come.

As chairman of the Post Office and Civil Service Committee, I carefully reviewed these proposals, as did you and Ways and Means Committee Chairman DAN ROSTENKOWSKI.

We concluded that, because the Federal civil service is so important to the welfare and future of our Nation, special pains must be taken to insure that whatever we in the House do will not weaken that system.

To this end, we outlined in a letter to our colleagues a joint position we felt was in the best interest of the Federal Government and those who serve it.

Since the House soon will be debating the social security proposals, I would like to reiterate our position for the benefit of Members:

We support the recommendation of the National Commission on Social Security Reform to extend social security coverage to newly hired Federal employees.

We believe that new Federal employees who become covered under social security should be provided retirement benefits comparable to those under the civil service retirement system.

We oppose the administration proposals that would reduce civil service retirement benefits and increase employee contributions to the civil service retirement fund.

We oppose the administration proposal to treat cost-of-living adjustments for Federal retirees differently from those of social security recipients.

We will oppose any proposal which would threaten or adversely affect the financial integrity of the civil service retirement fund, or the ability of that fund to continue to pay benefits promised to participants in the civil service retirement system.●

HUMAN BANK TELLERS: ONLY FOR THE AFFLUENT?

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

● Mr. ANNUNZIO. Mr. Speaker, I recently read a very disturbing article in the American Banker newspaper. It seems that Citibank, the second largest bank in this country, has decided that only its affluent customers deserve the services of human bank tellers. Everyone else will soon be forced to use automatic teller machines to do their business.

Citibank will begin this project at one of its New York banks in the middle of March. Only CitiExpress and priority customers—those with balances of at least $5,000 and $25,000, respectively—will be able to see a real live teller. Anyone with a balance lower than that must face a machine.

If you think that the bank is actively publicizing this innovative program, you are wrong. The only inkling that consumers have of the new plan is a misleading banner outside of the branch that reads "Announcing Improved Services for Citipeople" and a brochure telling people that "Citibank's bringing more banking hours to the West Side."

It is only when you go inside and begin asking questions that you discover that Citibank's new banking hours are but a small part of its new approach to customer service. Not only will the services of tellers be restricted to the upscale during the new evening and weekend hours—they will be off limits to regular customers during normal banking hours as well.

So while the average customer will have to wait in line to get at a machine, those with balances in excess of $5,000 will complete their transactions with the assistance of human tellers. They also get the privilege of doing this behind locked gates in a separate part of the bank.

It is quite obvious to me that Citibank does not want to waste its tellers' time with lower income people. I guess that Citibank thinks that those who do not have at least $5,000 on deposit are not very important customers.

Fortunately, those Citibank customers who would prefer to have the option of doing their banking with human beings have many other choices. According to recent figures, there are more than 400 different commercial banks, savings and loans, and credit unions in New York City. I imagine that many of these institutions allow those with less than $5,000 on deposit to do their business with human tellers. All the disgruntled Citibank customer need do is move his or her money over to another bank.

Though I see nothing wrong with Citibank installing automatic teller machines for the use of its customers, I vehemently object to its forcing people—on the basis of how much money they have—to use machines. Consumers should be able to decide whether or not they wish to use the automatic systems. After all, it is their money—not the bank's.

Unfortunately, Citibank does not seem to realize this. Perhaps if it starts losing some customers, it will reevaluate its priorities and reconsider this blatant anticonsumer policy. Let us hope so, for it would be a sad day for most Americans if banks permitted only the affluent to do their banking with human tellers and forced everyone else to deal with machines.●

□ 1940

EL SALVADOR

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 30 minutes.

Mr. GONZALEZ. Mr. Speaker, the administration wants an immediate boost of $60 million in military assistance to El Salvador. More ominously, they want to increase the number of U.S. military personnel there from 37 to 55. These soldiers will be trainers, so we are told. They will not be advisers, we are told.

Apparently this means that the administration plans no combat role for Americans, not right now anyway, although actually with what has been happening in the immediate past 2 years makes it a continued force and a disturbing imitation and duplication of what we saw in 1963 happening in Vietnam with the tragic consequences that history now has registered.

Those of us who remember the Gulf of Tonkin resolution know just how big a seemingly innocuous commitment can become. In the case of the Gulf of Tonkin, Congress was led to believe that it was passing a resolution that merely affirmed the right of self-defense. The President was asking for moral support in his rightful defense of American interests from Congress.

I remember having some questions about that at the time, but I got the assurance that this was just a resolution to show the North Vietnamese or Communists that the United States would not be kicked around. It was only later that the then administration argued that the Gulf of Tonkin Resolution was, to quote, "the functional equivalent of a declaration of war."

We have fair warning. The President has not asked us to pass any grand resolution regarding El Salvador, but his administration is already drawing the fine semantic lines that obscure, mask, and conceal ultimate intentions. The real issue is this: What is the compelling American interest in El Salvador that justifies the commitment of American troops to that country, whether they are called trainers, advisers, or anything else, or whether you commit them as combat units.

If there is compelling interest, is that in the nature of natural resources, trade, or some strategic concept? Thus far we have been told that there is a strategic concept, a geopolitical sort of thing at this point that is at stake. But up to now, to my knowledge, no one has successfully defined what that stake is, whether it has been attempted to be defined by either any Member of the Congress or the President or his administration. Nor has anyone told us how it is possible to assist a government that is in trouble

for one reason, and only one reason, and that is the historic repression, the systematic exploitation of its own people.

This is no recent thing. It is a fact of life that goes back for decades, even centuries, in places like El Salvador. The tragedy of today is that our Government has made, is indeed making, almost no effort to stand for the protection of human rights, to insist on an end to economic exploitation, to stand for, in other words, fair and square dealing with a government's own people.

Did Somoza fall because of some great plot? No. He fell because he, his government, his works, were corrupt, archaic and, let us face it, indifferent and callous and stupid. His government fell like a rotten corpse, burst asunder in the heat of its own evil.

Our Government never tried to stand for peaceful progress in that country. It did very little to do so, and has continued to do very little in El Salvador.

If we are being asked to pony up tens of millions of dollars in military aid today, and if we are being asked to look aside while our young men are being asked to serve in yet another murky cause, let us remember this: It would not be happening if we had stood for American principles in the first place.

People do not rebel for the sake of a good fight. They rebel because there is injustice, because they have grievances, because there is no legitimate way to resolve their problems. People rebel because they at last are left with no choice.

In El Salvador it may well be too late to do whatever it is we hope to accomplish by way of military force. In the final analysis, it will be force that ends the struggle; it will have to be and must be justice. A government that is for its own people, a government that is just, will bring peace within its own borders, and it is that kind of justice, that kind of commitment to people, that we have failed to demand in El Salvador. On the contrary, we are identified with the oppressor, we are identified with the murders of archbishops and priests and nuns, some of them Americans.

But El Salvador is not the only thing on my mind. If we want to see a place that is truly important to the United States in every possible way, politically, economically, strategically, that place is our next door neighbor, the Republic of Mexico.

I remind my colleagues that Mexico is in a profound economic crisis. The people of that country are undergoing the most dire kind of distress. It is a distress that is so profound, so enduring, that the people of that great country may well become disaffected. There could be violence. There could be all manner of problems, as there are, indeed, already, and it is there in Mexico where we face the greatest challenge to our imagination and our leadership.

We ought to be asking: In the midst of crisis, are we asking the Mexican Government to stand by the principles that it must—justice, fairness, an equitable and open economic system? For if we do not, then the people of Mexico will see no hope for the future. Then Mexico could become as I am distressed to fear our Afghanistan. If we think we are troubled by El Salvador, let us remember that the whole of El Salvador is not as great as a single state in the Republic of Mexico. Nor does El Salvador possess the oil, the industry, the skills of Mexico.

Yet what is our policy? Our policy is to stand silent when it comes to the great principles of freedom. Yet when it comes to economic policy, our posture is to aggressively demand that the Government of Mexico follow programs that make Reaganomics, mass unemployment, and hunger in the streets, look like a high-class tea party. And perhaps that is administration policy: A tea party among those who are ignorant and insensitive to the basic needs and desires of humanity, who do not see the fires of resentment building.

I say this: We gain nothing by sending troops to El Salvador. We gain nothing by forgetting the hard lessons of the very recent past. We ought to be alarmed. We ought to be cautious. We ought to be resolving here and now, this country will stand for human decency and justice, or it stands for nothing.

After all, when it comes to a choice between dictators, what difference does it make if the dictator is attached to this or that geopolitical bloc? Misery is the same under any name. But liberty and justice, hope for the future—that is something else.

What will our course be? To me it can only be one thing, to stand for honesty and decency for economic progress and human justice which, in effect, is a true and valid reflection of America and its people.

□ 1950

Those things do not come in the uniform of foreign soldiers; those things come in the form of trust, in the form of peace, and in the form of commitment.

Mr. Speaker, I do not believe that we help our cause by sending soldiers to El Salvador. The peasants there will not know or care who they are; they will only know and care that these are foreign soldiers with no business there.

IN OPPOSITION TO TUITION TAX CREDITS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Colorado (Mr. WIRTH) is recognized for 5 minutes.

● Mr. WIRTH. Mr. Speaker, this morning, Senator ERNEST HOLLINGS and I were presented with half a million signatures on petitions from Americans living in all 50 States who oppose the administration's new tuition tax credit plan. The signatures were gathered by the National Coalition for Public Education, which represents 40 million people in 45 organizations. I would like to thank this coalition for dramatizing the dangerous effects tuition tax credits would have on our Nation's public education system. The hundreds of thousands of signatures presented to us today represent the deep concern of millions of Americans who believe, as I do, that tuition tax credits would pose a serious threat to the quality of public education. I will continue to work to insure they do not become law, and hope my colleagues will join me in this effort.

First, providing income tax credits to parents of students not attending public schools would be an enormously costly proposal. The Treasury would be drained of about $3 billion in the first 3 years, and the costs of tuition tax credits would continue to balloon without control. Allowing this revenue loss makes no sense at a time when we are facing record breaking Federal deficits hovering around $200 billion for the foreseeable future. It certainly makes no sense when public education programs have borne damaging cuts already, and the administration is proposing $2 billion in additional cuts for fiscal 1984. It would make far more sense to direct additional Federal funds to public education programs which are cost effective, proven, and designed to enhance our commitment to equality of education for all. Tuition tax credits would represent an erosion of support for one of the most fundamental institutions in American society which has helped make us a strong and unified democracy—free and equal public education.

Second, tuition tax credits would give the most benefit to those who need Federal assistance the least. The Congressional Budget Office has estimated, for example, that with a hypothetical $250 refundable tax credit for elementary and secondary education tuition payments covering 50 percent of tuition costs, about 42 percent of the funds would flow to families with incomes greater than $30,000. Only 16 percent would go to families with incomes less than $15,000. More than 60 percent of the benefits from tuition tax credits would go to the wealthiest 15 percent of our population under some proposals.

Third, there are serious constitutional questions raised by this proposal. Tuition tax credits would benefit only about 11 percent of school age children, most of whom attend schools associated with churches. Ninety percent of private schools are church related, and giving them Government support in the form of tax credits could easily lead to Federal intervention and regulation. A clear danger of violating the constitutional provision of separation of church and State is posed by tuition tax credits.

Mr. Speaker, certainly all of us are concerned about the rising costs of education, and the serious drain on family budgets posed by high tuition rates. Certainly all of us also believe that private schools play an important role in providing diversity in educational choice which is important to many families, and beneficial to our society in general.

But there are few investments our country can make that are more important than those in the minds and skills of our young people. Real supply side economics means investing in brainpower, our most precious national resource. Our public schools, dedicated to meeting the needs of all students, are deserving of more, and not less Federal attention. Tuition tax credits, especially in combination with the administration's efforts to drastically reduce Federal support for public education, threaten to erode this fundamental commitment. Instead, at a time when our economy relies ever more on a highly educated, technically skilled work force, we need a new commitment to excellence in public education for all Americans.

I look forward to working with my colleagues in the coming months as together we work to defeat tuition tax credits and instead strengthen public support for public education.●

PERSONAL EXPLANATION

The Speaker pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. MACKAY) is recognized for 5 minutes.

● Mr. MACKAY. Mr. Speaker, due to official business in my district in Florida on Tuesday, March 1, 1983, I was unable to be present for rollcall No. 10, final passage of H.R. 999, the American Conservation Corps Act. Had I been present, Mr. Speaker, I would have voted "for" the passage of the bill.

I appreciate having this opportunity to announce my position for the record.●

EXTENDING THE RENEWABLE ENERGY BUSINESS TAX CREDITS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. FUQUA) is recognized for 5 minutes.

● Mr. FUQUA. Mr. Speaker, last year, on July 13, 1982, Mr. FISH and I introduced H.R. 6735, the Business Energy Tax Credit Act of 1982, extending the termination date for existing business tax credits for solar, wind, geothermal and ocean thermal energy equipment from 1985 to 1990.

At the time, I cited the success of those tax credits in promoting third party financing of alternative energy systems, and the need to preserve those benefits for new technologies such as photovoltaics, large wind systems, OTEC and solar thermal central receivers, which will not achieve commercial readiness until the late 1980's.

Since then, however, the situation for renewable energy business investments has deteriorated significantly. The "basis adjustment" provisions of the Tax Equity and Fiscal Responsibility Act (TEFRA) of 1982 effectively reduce the value of the solar business tax credits from 25 to 20 percent. The softening of world oil prices and the recent decline in energy demand have decreased the "value" of the energy produced by renewable systems by as much as 30 percent. This double blow has placed in jeopardy many excellent renewable energy projects that seemed certain to proceed as recently as 6 months ago.

As a result of these developments I am reintroducing the Business Energy Tax Credit Act with some important new provisions:

First, the tax credit would be raised to 25 percent to compensate for the effect of TEFRA and the soft world energy market.

Second, an affirmative commitments clause would be included which allows projects which are not completed by December 31, 1990 to be eligible for the tax credits if they have received all necessary permits and completed engineering design by that date. This clause is needed to protect large solar projects such as wind farms and central receivers, which often take 3 or 4 years to complete.

With these changes in the solar business tax credits, I am convinced that the renewable energy technologies that have been developed at considerable taxpayer expense by the Department of Energy over the last few years can be turned over to the private sector in the late 1980's with reasonable prospect for commercial success.

This will not be a permanent subsidy from the U.S. Treasury for renewable energy equipment. The business tax credit simply serves to stimulate an early market to cover the expense of tooling up for mass production. Once volume production begins, there is strong evidence that the renewable technologies will be able to compete unassisted in the energy marketplace. At that time the tax credit will have served its purpose and will be terminated.

I was pleased to hear Secretary of Energy Hodel express his personal support for extension of the solar business tax credits at the DOE posture hearing, February 8, 1983. I hope he will work to persuade the administration to support this initiative.

I am convinced that the benefits of extending the tax credits—in terms of reducing our use of conventional fuels, opening up new business opportunities in a high technology area, and providing for jobs and economic growth—will more than compensate for the direct costs to the Treasury. One study I have seen indicates that the Treasury could even come out ahead after all secondary effects are considered. Therefore, I hope this initiative will receive widespread support from individuals and groups in both parties and both branches of the Government.●

SMALL BUSINESS MOTOR FUEL MARKETER PRESERVATION ACT REINTRODUCED

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Iowa (Mr. BEDELL) is recognized for 5 minutes.

● Mr. BEDELL. Mr. Speaker, today I am pleased to reintroduce the Small Business Motor Fuel Marketer Preservation Act, H.R. 1755. Joining me as original cosponsors is a bipartisan group of over two dozen of our colleagues.

This legislation is intended to give independent gasoline dealers a fair and equitable chance to compete in the marketplace. Passage of the legislation would be of immediate and lasting benefit to both small businesses and consumers. It is long overdue and much needed.

The Small Business Committee has held hearings on gasoline marketing practices every year since 1979. And every year we have seen compelling evidence that major oil companies are using their vast economic power to slowly crush the independent sector of the gasoline marketing industry.

The heart of the problem is that these oil companies are both the suppliers and the landlords of the independent dealers against whom they are increasingly competing in the retail market. True competition under these circumstances is, of course, impossible, because one party effectively controls the actions of the other.

Take the case of the franchise dealer who leases his station from the refiner, which is a very common arrangement. Here, the refiner is able to dictate the dealer's rent, the price and availability of product, credit terms, hours of operation, and so forth.

The relationship between refiner and marketer is shamefully one sided.

The record is replete with examples of oil companies unilaterally imposing tremendous rent increases, arbitrary gasoline price changes, major shifts in credit policies, unfair allocations of product, and so forth.

As if this were not bad enough, several of the major oil companies are now selling large volumes of gasoline through outlets operated by their own employees or contracted agents. In many instances, they are competing directly against the same marketers that they supply and whose businesses they effectively control.

Thus, it should come as no surprise to anyone that the number of independent service stations in America has plummeted in recent years. While some of this may be attributable to other factors, such as the overall decline in gasoline consumption, it stands in sharp contrast to the steady increase in the volume of gasoline sold through company-operated stations. There are many of us who believe the oil companies are taking over the more lucrative portions of the retail gasoline market as a result of unfair and anticompetitive behavior.

For a variety of reasons, recourse to the existing antitrust laws is not impractical. Aside from the difficulty of applying the antitrust laws to instances of suppliers competing directly against their own distributors, we have the more practical problem that big oil companies have the economic power to kill small businesses while we wait for the wheels of the legal system to grind finely but slowly.

Mr. Speaker, before I go on to describe the specifics of this legislation, I want to point out that not all of the oil companies are guilty of the sort of unconscionable business practices I have described here. Some are truly bad actors, but others actually enjoy good relations with their distributors, and the rest fall somewhere in between. Moreover, the problem clearly is more acute in some regions of the country than in others.

This does not mean, however, that we can or should ignore this situation. Thousands of small businesses desperately need our help, and they need it now. It is the duty of the Government to see to it that competition in gasoline marketing—or in any other industry, for that matter—is fair and equitable. So, we must keep in mind not only the need to address the specific misconduct we have observed, but also the fact that just a few major companies behaving in an irresponsible manner can create major disruptions affecting everyone in that industry.

Now, the Small Business Motor Fuel Marketer Preservation Act is offered as a solution to the problem of big oil companies competing against marketers from whom they are the suppliers and landlords. And it goes one step further, helping consumers by injecting a greater degree of price competition into the wholesale market as well.

There are three key provisions in this bill. They are: retail marketing divorcement; open supply; and SBA assistance. The following is a brief description of each of these features.

DIVORCEMENT

The 16 major, integrated refiners would be prohibited from directly operating retail gasoline outlets in the United States, either with their own employees or through contracted management. They would still be permitted to own gas stations, but these must be leased out to independent businesses.

OPEN SUPPLY

Service station operators would be assured of the right to shop for competitively priced supplies of gasoline at the wholesale level, with their regular suppliers having the option of meeting competitive offers. So-called branded dealers would have to provide point-of-sale notice to consumers if the product being sold was obtained frm anyone other than the branded supplier.

SBA ASSISTANCE

Small Business Administration loans or guarantees would be made available to service station dealers who have the opportunity to purchase stations they currently lease from refiners. A mechanism is established to determine fair market value for the property. Funding would come from existing SBA authority.

Mr. Speaker, this is a simple but powerful package. It would end the insidious practice of oil companies competing against their own distributors. And it would open the wholesale gasoline market up for price competition such as we have not seen in the United States for years. Instead of 100,000 branded and company-operated stations forming a vast, captive market for a handful of big oil companies, we would see a dynamic marketplace full of entrepreneurs, each struggling to bring the product to the public at the lowest price on the best terms possible.

Declining world crude oil prices and a shrinking domestic market for gasoline today have produced the temporary illusion of competition in the marketplace. It really is just a few huge corporations jostling to see who gets to sit at the head of the table. Meanwhile, small businesses are left with the crumbs. If you want to see real competition, pass this legislation and watch the free enterprise system at work.

Mr. Speaker, the House Small Business Committee reported an earlier version of this bill by a vote of 25 to 1 in 1980. Last year, the Senate Judiciary Committee did so by a vote of 9 to 6. I hope we can get this legislation to the floor soon, so all Members can have a chance to show their support for small business.

HOWARD METZENBAUM and STROM THURMOND have introduce a companion bill, S. 40, in the Senate. Here in the House, we would welcome additional cosponsors.●

NATURAL GAS CONSUMER REGULATORY REFORM AMENDMENTS OF 1983

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. CORCORAN) is recognized for 60 minutes.

● Mr. CORCORAN. Mr. Speaker, few would dispute the fact the natural gas market in the United States is in general disarray. Steadily escalating prices at the burner tip are merely symptoms of a more serious underlying disease which afflicts the body of our Federal natural gas policy. This sickness continues to drive up prices to artificially high levels, which the market says prices should be declining.

The problems in the gas market are not isolated to one segment of the industry or a certain geographical area—the problems affect everyone. Let me give a few examples:

Consumers in Illinois are paying over $100 million more in gas bills because high-priced Canadian gas is displacing cheaper, available domestic supplies.

Industrial users in the Midwest and the Northeast are switching to alternative fuels which, until recently, have historically been far more expensive than gas. For example, the price of natural gas delivered to industrial consumers in Buffalo, N.Y., is $1 per million Btu's more than the competing fuel oil.

A distribution company in my State was recently told by its supplying pipeline that it would suffer financial repercussions for attempting to acquire some of its gas from another pipeline.

A pipeline company which serves Illinois recently asked its domestic producers to cut back their supplies by 20 percent to make room for Algerian liquefied natural gas (LNG) at over double the cost.

Many domestic producers, especially in the Midwest, Northeast, and West, that have gas available at very attractive prices, are being shut in by pipelines who are committed to rigid take-or-pay obligations for more expensive gas.

The problems affect everyone—consumers, industrial users, distribution companies, pipelines, and producers.

Mr. Speaker, I do not think anyone should be satisfied with the current state of affairs. As I have said before, we are experiencing irrationality in our gas market—gas policy gone haywire. If you wonder why the gas market does not act like a market should, it is because of the overwhelm-

ing negative influence of existing Federal laws.

Mr. Speaker, I am introducing today at the request of the President his proposal to put competition in charge of natural gas pricing. I am convinced that unless we in Congress act soon on natural gas—and President Reagan has given us the framework and the impetus to act—we will find ourselves pressed to recontrol natural gas prices. If we do that, we know we will soon be creating a shortage.

If we act to recontrol prices, we will not be protecting consumers; quite the contrary, we will just encourage more and more imports of natural gas at exceedingly high prices. Perhaps, Mr. Speaker, some interests, such as importers of Canadian or Algerian or Arctic gas, will benefit, but consumers will pay unnecessarily high bills as a consequence. Mr. Speaker, I am against high natural gas prices just as I am against high oil prices. I am for competition. I am for the consumer.

Mr. Speaker, today I am introducing by his request the President's innovative proposal on natural gas. I believe it is an interesting and promising idea. I intend to be very active in the debate on this bill, just as I have been active in the past—when all we did was to debate. Now it is time to act. This bill, like all first drafts, will need revision. That is what the legislative process is all about. I am anxious to get to work.

Mr. Speaker, the New York Times and the Washington Post both used the same word to describe the President's proposal. They called it elegant in separate editorials both published yesterday. Now at the same time, Mr. Speaker, the Wall Street Journal thought it was not enough. And the Oil Daily reported that:

> Outside of Congress, bill supporters have had to deal with something of a mini-revolt by some producers. They have argued that they would be hurt by the gas cap, which they say might be too low, and the provision calling for a review by the FERC of certain purchased gas costs before they can be passed through by interstate pipelines.

It seems to me, Mr. Speaker, that with a variety of comments such as these, it must mean that the President has come out four-square in the middle, not too much to the left nor the right. Now, the legislative process may move this bill only after shifting and sorting, but I am convinced we have before us the fundamentals and the agenda. I am equally convinced that we must act this Congress, indeed this session, and our choices are three: This bill, this bill plus bipartisan revisions, or recontrol.

Mr. Speaker, I include the three editorials referred to for reprinting at this point in the RECORD.

[From the New York Times, Mar. 1, 1983]

A NATURAL ANSWER FOR NATURAL GAS

Some Democratic responses to President Reagan's proposal to deregulate natural gas have been quick, bitter and misguided. One liberal opponent labels it a joke; another calls it absurd. In truth, the proposal is an inventive, even elegant solution to an increasingly aggravating problem: how to protect both consumers and producers during the present transition to an efficient competitive market for natural gas.

The plan could stand improvement. For instance, some of the revenue windfall received by some producers could be taxed. But it's a fine start.

Under the Natural Gas Policy act painfully put together in the Carter years, prices were partially decontrolled. Controls on newly discovered gas were liberalized and set to expire in 1985. Prices for "old" gas, discovered before the legislation, were frozen forever. Everyone hoped that this compromise would create adequate incentives for exploration and conservation while cushioning consumers against price increases.

The hopes, alas, have collapsed. Incentives to sell gas from very deep wells proved too generous; gas from lower-cost wells goes begging for customers. Consumers with access to "old" gas still pay bargain rates that encourage wasteful overuse; consumers elsewhere reel from dramatic price increases. And, judging by the cost of competing fuel oil, average gas prices have risen about as much as they would have without any controls.

Unless something is done, gas prices, and the economy, will continue to suffer painful distortion. One approach would be to tinker with regulation again. But Mr. Reagan's advisers have found a shrewder way—one that uses the free market to smooth the transition. All controls on gas, including "old" gas, would be removed on Jan. 1, 1986. On that date, buyers and sellers would have the right to abrogate contracts signed before the new legislation. But in the meantime, they would be free to decontrol themselves right now by negotiating new long-term contracts, subject only to temporary price ceilings.

That idea improves on partial decontrol in two ways. First, it would give consumers a sturdier umbrella of price protection. Second, it would give buyers and sellers strong incentives to negotiate new contracts now rather than later, and at terms both believe will be competitive under deregulation. In the long run, some prices would undoubtedly go up—but some would almost certainly fall, reflecting the anticipated cost of competing fuels.

Extrapolating from the grotesquely high prices some pipelines have paid for small quantities of deep-well gas, Democratic opponents find that prospect hard to accept. And so they are likely to resist by trying to postpone the date of decontrol. If their aim is to hold prices down over all, that could be self-defeating. Delay would undermine the incentive to bargain created by the Reagan plan. A more profitable avenue of compromise would be tax the decontrolled "old" gas. Such a tax would not discourage production, yet would recoup some of the revenue windfall.

Opponents seek to make an ally of the unknown. Prices under the Reagan plan might go up, they say; at least no one can be certain they won't. But that's a conjectural problem. The country must deal, right now, with a known one: the distortions under the present law and the certain prospect that when it expires in 1985, the economy will suffer a painful transition. The Reagan plan would ease the way.

[From Washington Post, Mar. 1, 1983]

THE LATEST GAS BILL

The last attempt to write rational and fair price controls for natural gas has turned out spectacularly badly. Prices keep rising in the midst of a dramatic surplus. Cheap gas goes unsold while expensive gas flows at a pleasant profit to its producers. The spectacle evokes mixed feelings, as the Reagan administration now begins the slow and difficult process of enacting something better. Just about everybody agrees that reform legislation is necessary. But it's hard to find any three people who agree on precisely what direction it ought to take.

President Reagan sent to Congress yesterday a bill that deserves to be taken seriously as at least a point of departure. It gives the pipelines an opportunity to renegotiate or even to break the take-or-pay contracts that are responsible for much of the current rise in prices. It promises the gas producers a competitive market and freedom from controls. It offers consumers the protection of a cap on the prices that pipelines can pass through to their customers. It's an elegant and intelligent compromise, very much worth discussing further.

But nothing about gas pricing is simple. The malfunction of the present law, enacted in 1978, is largely the result of its authors' misjudgment of the rise in energy prices. Much of the industry, not to mention its customers, now fears that the present bill similarly misjudges falling energy prices. Suppose a year or two from now oil suddenly swings around and gets more expensive, once again drawing gas prices upward with it. The pipelines are fearful of being caught between a competitive market in the gas fields, at one end of their lines, and the federal cap on the prices it can pass along at the other. Producers are uneasy about the prospect that, if prices start up again, Congress might lose its enthusiasm for free competition in the gas fields and reimpose controls. Many of the consumers' organizations, having seen the rise in prices under the present regulations, mistrust the regulators.

In American politics it sometimes happens that a bill is so bitterly contested by so many deeply divided interests that clear and efficient legislation becomes impossible. Natural gas pricing is a conspicuous example. Over three decades of price controls, the rules have become steadily more turgid and intricate in character while becoming more perverse and unsatisfactory in effect. At present there is no majority visible in Congress for any bill. Nobody wants to live with the present law. But it's far from clear that the president's alternative, or any other, can actually be passed.

[From the Wall Street Journal, Mar. 1, 1983]

GETTING BURNED ON GAS

After two years in office, President Reagan says he is finally ready to make good on his promise to "decontrol" natural gas. The benefits of his earlier decision to decontrol oil are abundant what with the OPEC chaos and declining prices. "The doom-sayers were dead wrong," the president said in his radio address Saturday. "You don't have to go any farther than the nearest filling station to see that prices have gone down."

For all the rhetoric, however, the president's proposals are far from a free market approach; in many respects, the proposals are even more complicated and potentially

burdensome than existing regulations. Certainly, the proposals, as currently formulated, are unlikely to reap the major benefits that have accrued from oil decontrol.

It's important first to understand that the recent upsurge in residential gas prices is due precisely to the controls of the Natural Gas Policy Act of 1978. The act encourages the production of the most expensive types of gas, such as "deep" gas below 15,000 feet and high-priced imports, while it provides little or no incentive to enhance production of relatively cheaper gas. As oil prices have fallen over the last 18 months or so, industrial users have been switching from gas to oil. With gas pipeline throughput declining, the residential consumers were left picking up a larger chunk of the expensive gas distribution costs.

The president's plan to place a "cap" on gas price increases won't solve those problems. Prices will be limited to the current ceilings in the NGPA or less. Thus producers would still have little incentive to enhance output of relatively cheap gas, while more expensive types of gas will continue to flow. Consumers would still be forced to pick up the hefty distribution costs as more large customers convert to less expensive oil. And some gas pipelines, now filled with cheap "old" gas, will have a hard time trying to pass along the costs of new, more expensive replacement gas.

Moreover, the president hopes to encourage producers and pipelines to renegotiate existing contracts by a federal fiat that would obligate gas purchasers to only 70% of their "take or pay" contract volumes. Such federal intrusion into privately negotiated commercial contracts raises serious issues of legality, and goes against the grain of the administration's free market doctrine. The president's program was described as a "compromise" between those advisers urging complete decontrol and those concerned about a "consumer backlash." But the supposed consumerists aren't doing consumers any favor. Prices will continue to rise sharply.

The solution to the gas dilemma is complete decontrol. Faced with market pressures from competing lower oil prices, producers, pipelines, utilities and large industrial users will find it mutually advantageous to renegotiate contracts to achieve greater volumes at lower unit cost while sharing the profit margin. President Reagan's "decontrol" plan isn't much of a solution.●

● Mr. FIELDS. Mr. Speaker, today I along with several of my fellow colleagues from the Energy and Commerce Committee are introducing the administration's proposal to decontrol natural gas prices. This legislation, the Natural Gas Consumer Regulatory Reform Act, is the first major step toward decontrol of natural gas.

Mr. Speaker, many of us in Congress have heard from various interest groups, including producers, pipelines distribution companies, and especially consumers, on the problems of the current natural gas market. Gas prices continue to rise despite the surplus in the market. Consumers are being forced to accept these escalating prices despite the fact that old cheap gas is being shut in in favor of newer, more expensive gas being purchased by the pipelines. This regulatory and economic anomaly is a direct result of the Natural Gas Policy Act of 1978 (NGPA).

In passing the Natural Gas Policy Act of 1978, Congress established 20 different categories of one basic commodity, natural gas. In addition, incentives were created for new exploration and development of gas reserves so that the shortages of the winter of 1976-77 would not recur. Under the scenario created by the NGPA, some of these categories of natural gas will be free from price controls in 1985 while other categories of gas, mainly 104—old gas—will remain under price controls until these reserves are depleted.

Mr. Speaker, the intention of the 95th Congress; namely, a continued stable supply of natural gas at a reasonable price, has not been accomplished. What is happening in the market right now is a direct contradiction of elementary economics, rising prices during a period of a tremendous surplus. This economic contradiction needs to be eliminated.

Mr. Speaker, the time has come to reopen the debate on natural gas policy and allow free market principles to operate in the market. We in Congress have a responsibility to our constitutents and to the entire country to set a national policy on natural gas which restores some semblance of economic rationale to this issue.

As a cosponsor of the President's package, I applaud this innovative approach and look forward to an active role in securing enactment of this legislation.

Finally, Mr. Speaker, I would like to submit for the RECORD two editorials, one from the Dallas Morning News and one from the Dallas Times Herald, both of which endorse the President's initiative on natural gas decontrol.

[From the Dallas Times Herald, Mar. 1, 1983]

NATURAL GAS DECONTROL

President Reagan's announcement that his administration will push additional decontrol of natural gas prices at the wellhead should be welcome news to Texans. For too long, federal controls on the resource have distorted pricing to the detriment of the state's consumers and gas producers.

The Natural Gas Policy Act of 1978, passed under the Carter administration, was billed as a decontrol measure, and indeed it was better than the system of total controls that it replaced. Under that law, price controls on about 65 percent of the nation's gas are to be phased out by Jan. 1, 1985. But, unfortunately, it also created a complex tier-pricing system that kept controls on "old" gas produced before 1977 and based the price of new gas on the depth of the well the gas came from, with only the deepest gas being totally decontrolled.

The system gave a competitive edge to interstate pipeline companies that had long-term contracts with producers of old gas, and it allowed them to continue to send a blend of old and new gas to customers in other states at favorable prices, while Texas consumers in many instances have had to pay higher prices because the distribution firms that supplied them have become more and more dependent on costly new gas. Because President Reagan's plan calls for decontrol of old gas, the prices that out-of-state customers pay for gas eventually should equalize with those paid by Texas consumers.

That does not mean that Mr. Reagan's plan is devoid of problems and contradictions, however.

The President predicted that a freer natural gas market would have the same kind of effect that the decontrol of crude oil had and that natural gas prices would decline, just as the cost of gasoline has come down. But consumers should be wary of such predictions and keep in mind that different dynamics are at work here. Natural gas is transmitted and distributed as a highly confined utility, while gasoline consumption is somewhat discretionary and gasoline sales are the end product of a highly competitive and diversified marketing system.

It is likely, therefore, that the price of natural gas will continue to climb in the future for all consumers, as producers and pipeline and distribution companies renegotiate old contracts and sign new ones under provisions of the Reagan decontrol plan.

The Reagan measure faces some opposition from the natural gas industry, as well as from consumer groups. Pipeline companies are opposed to a provision that would prohibit them from automatically passing on their costs to customers. And producers are opposed to any change in the "take-or-pay" contractual arrangement under which purchasers must take a fixed amount of gas or pay for it anyway. The President wants to reduce the pay part of the arrangement to 70 percent.

But the general aim of the administration's decontrol measure is a good one. It will end the economic morass caused by the present pricing system, and it eventually should produce the investment capital necessary to drill more gas wells and to replenish declining reserves.

[From the Dallas Morning News, Mar. 1, 1983]

NATURAL GAS: DEREGULATE NOW

Let us get promptly to the heart of the natural gas question. If Congress deregulates gas prices, as President Reagan calls on it at last to do, will this force consumer prices up?

It certainly won't. Decontrol will force prices down.

When it comes to energy, decontrol is the most proconsumer measure imaginable.

Natural gas prices are too high. Everyone knows this. But why are they too high? Unfortunately, everyone doesn't know this.

Gas prices are too high due to three decades of federal regulation. Contrary to widespread popular belief, there hasn't been a free market in gas since 1954. From 1954 to 1978 the federal government fixed the wellhead price of gas sold across state lines; in 1978 it crossed state lines and started fixing prices even in producer states like Texas, where the law of supply and demand had formerly set prices.

The Natural Gas Policy Act of 1978, while establishing two dozen different pricing categories for gas, did in fact free certain kinds of gas from controls—the wrong kind of gas, as it happened.

The act allowed producers to charge premium prices for the costliest kinds of gas, which of course is what they went after,

rather than the cheaper, easier-to-find varieties. This gave prices an upward spin.

Worse, a quarter of a century of controls had by the late '70s brought on an acute shortage of gas. Pipeline companies, to keep their customers supplied, contracted to buy high-priced gas on a "take-or-pay" basis (i.e., they promised to pay whether they needed the gas or not). This, too, forced up prices.

As prices rose, industrial customers switched increasingly to cheaper fuel oil, leaving homeowners to pick up the tab.

Much remarked by commentators is the phenomenon of rising gas prices at a time of oversupply. It's the sort of phenomenon you place—only in a regulated one.

Swift and straightforward decontrol would be best for the country, because it would (1), bring onto the market shut-in supplies of lower-priced gas that would (2) force down the overall price level; meanwhile (3) the search for new reserves would be stimulated. Political tensions being what they are, this almost certainly is not in the cards. To his decontrol proposal the President is likely to couple assurances that prices may not in the short term rise beyond the level of inflation.

So be it. The paramount necessity is deregulation. What's good for oil is good for gas. And that's very good indeed—as witness what is happening, in an uncontrolled domestic market, to oil prices. They aren't rising—they're falling!

Should we be surprised? Or haven't we figured out by now that the free market is the best "consumer protection" ever devised by the mind of man?●

● Mr. BROYHILL. Mr. Speaker, of all the issues before this Congress, one of the most critical is the issue of natural gas pricing. Simply put, the prices are too high given the ample supplies and the decreased demand during the past year-and-a-half. With oil prices in decline, I believe the price of natural gas should not rise as much as it will rise if we fail to act. The price of natural gas continues to go up and up, in disregard of the usual laws of supply and demand. More and more of our constituents want to know why. Even more, they want to know what we in Congress intend to do about it.

I want to talk about what I call the antimonopoly bill, or the Consumer Relief Act. The President calls it the Natural Gas Consumer Regulatory Reform Amendments of 1983. This is a proposal whose harshest criticism has come from those totally unfamiliar with its design.

I urge my colleagues not to leap to judgment, but to take a careful look at this comprehensive and quite innovative proposal now being circulated on the Hill. One energy trade press columnist has called it "ingenious," adding, "By focusing on contracts and the principle of achieving competition at the burner tip, the drafters have come up with a plan that is without question politically salable."

What makes this true is that, under the Hodel proposal, new increases in purchased gas costs could no longer be automatically passed through to consumers but must be first reviewed by the Federal Energy Regulatory Commission under a new and tough standard. With this element of consumer protection firmly in place over the prices, our consumers must pay for natural gas, the price controls over what pipelines can pay producers become exposed for what they truly are: an elaborate, expensive price support program. In fact, with the Hodel proposal, prices for natural gas will be reallocated among producers by the pipelines with the result that prices charged to consumers can even come down.

If you number yourself among those of us who feel a real need to "do something" about natural gas prices, this may well be it. There is, however, no need to decide this now; there is every reason for you to "keep your powder dry." At a very minimum, this proposal promises to be the framework for turning the unpleasant controversy of natural gas legislation into a productive and comprehensive compromise for change. No one should, at this point, prefer the opposite course of endorsing the status quo of ample supplies, reduced demand, but skyrocketing prices.

In one respect, the entire issue of natural gas has changed as the real world of the natural gas market has changed.

The delivered price of natural gas to our consumers, residential and industrial alike, has neared, already reached, or even exceeded, the price of competing fuels.

The existing laws have not protected consumers from sharp price increases but rather have acted, perversely, to encourage the record high prices for the most exotic and expensive of supplies, including an increase in imported gas.

The demand for natural gas has begun to decline, just as oil demand did, as the price reached the market-clearing level. This decline in demand is due in part to the recession but also to conservation and to fuel-switching. Even as our economy recovers, downward oil prices should put downward pressure on natural gas prices.

Recent sales of new natural gas have tended not to reach the price ceilings due to the large size of the buyers' market. Forcing all existing natural gas contracts to be renegotiated under these same conditions would benefit consumers. The economic result would be a transfer of income from high-cost gas producers to low-cost gas producers, lower imports, and the prospect of lower, more sensible prices to consumers.

Current laws and industry practices actually work against maximizing low-cost gas production. In addition, there are many producers who want to sell their gas for less but are either shut in by a pipeline that will not accept delivery for resale or shut out by a pipeline that will not transport the gas for direct sale.

As a framework for us in the Congress to legislate on this most difficult of issues, the President's proposal is most imaginative. It is responsive to the needs not just of natural gas consumers but of us here in the Congress as well.

In short, it allows us to reform the regulations over this industry so that competition can go to work to benefit the consumers without putting us in the position of having to vote for any specific right price for gas.

I believe prices are already too high. I agree with the Chairman of the Federal Energy Regulatory Commission that the price of natural gas has already reached or exceeded the price of competing fuels. And—unless we act—the price of natural gas will go up even more.

Mr. Speaker, the price of natural gas in North Carolina today is threatening the residential consumer and the basic manufacturing industries which have been the mainstay of our economy for generations. Something must be done, Mr. Speaker, and the President's proposal is the framework for change. We may not be able to agree on every single point. We may make—in fact, I am sure we will make—revisions to this bill as it proceeds through the legislative process. I believe Secretary Hodel knows this, and I am confident that he will want to work with us. There is no good reason all of us cannot work together.

I want to point out to my colleagues that until the President put this natural gas package together it was the conventional wisdom that no legislation could be produced by Congress; the cynics said a stalemate was inevitable. That would mean even higher prices. The President has proved the cynics wrong once again. His legislation, which I join with several of my colleagues in introducing at his request, will become—in effect—an agenda for change. As the ranking Republican on the Committee on Energy and Commerce, I believe we will be well served to begin our legislative hearings with a focus on this bill.

Thank you, Mr. Speaker.●

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. JONES of Tennessee (at the request of Mr. WRIGHT) for this week on account of illness.

By unanimous consent, leave of absence was granted to:

Mr. FORSYTHE (at the request of Mr. MICHEL) from March 1 through the balance of the week on account of a death in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. WEBER) to revise and extend their remarks and include extraneous material):

Mr. CORCORAN, for 60 minutes, today.

Mr. BETHUNE, for 60 minutes, March 3, 1983.

(The following Members (at the request of Mr. WILLIAMS of Montana) to revise and extend their remarks and include extraneous material:)

Mr. FORD of Michigan, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 30 minutes, today.

Mr. WIRTH, for 5 minutes, today.

Mr. MACKAY, for 5 minutes, today.

Mr. FUQUA, for 5 minutes, today.

Mr. BEDELL, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. FORD of Michigan, immediately following the remarks of Mr. PERKINS on H.R. 1310 in the Committee of the Whole today.

Mr. HOYER, immediately following the remarks of Mr. FORD of Michigan on H.R. 1310 in the Committee of the Whole today.

Mr. PORTER, during general debate on H.R. 1310 in the Committee of the Whole today.

Mr. GREEN, in support of H.R. 1310 in the Committee of the Whole today.

(The following Members (at the request of Mr. WEBER) and to include extraneous matter:)

Mr. MCKERNAN in two instances.

Mr. FRENZEL.

Mr. THOMAS of California.

Mr. YOUNG of Florida in 10 instances.

Mr. RINALDO.

Mr. PHILIP M. CRANE.

Mr. KEMP in three instances.

Mr. CONTE.

Mr. MICHEL in two instances.

Mr. ROTH.

Mr. LIVINGSTON in two instances.

Mr. MADIGAN.

Mr. ERLENBORN.

Mr. PAUL in two instances.

Mr. WOLF.

Mr. BETHUNE in two instances.

Mr. SHUMWAY in two instances.

Mr. BROOMFIELD.

Mr. LAGOMARSINO.

Mr. FIELDS in two instances.

Mr. CORCORAN.

Mr. MARTIN of North Carolina.

(The following Members (at the request of Mr. WILLIAMS of Montana) and to include extraneous matter:)

Mr. HOYER.

Mr. HALL of Ohio.

Mr. ROYBAL in two instances.

Mr. RODINO in two instances.

Mr. FORD of Michigan in three instances.

Mr. BRITT.

Mr. AUCOIN.

Mr. ADDABBO in two instances.

Mr. OTTINGER in three instances.

Mr. SHELBY.

Mr. LELAND.

Mr. STARK.

Mr. HUBBARD.

Mr. LEHMAN of Florida in two instances.

Mr. WIRTH in two instances.

Mrs. BOXER.

Mr. BARNES.

Mr. MINETA.

Mr. D'AMOURS.

Mr. MAZZOLI.

Ms. OAKAR.

Mr. FUQUA in five instances.

Mr. DYSON.

Mr. HOWARD.

Mr. BEDELL.

Mr. OBEY in five instances.

Mr. MARKEY in two instances.

Mr. PEASE.

Mr. FORD of Tennessee.

Mr. CARR.

Mr. MURTHA.

Mr. GAYDOS.

Mr. APPLEGATE.

Mr. SYNAR.

Mr. HEFTEL of Hawaii.

Mr. WALGREN.

ADJOURNMENT

Mr. GONZALEZ. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 7 o'clock and 50 minutes p.m.), under its previous order, the House adjourned until tomorrow, Thursday, March 3, 1983, at 10 a.m.

OATH OF OFFICE, MEMBERS, RESIDENT COMMISSIONER, AND DELEGATES

The oath of office required by the sixth article of the Constitution of the United States, and as provided by section 2 of the act of May 13, 1884 (23 Stat. 22), to be administered to Members, Resident Commissioner, and Delegates of the House of Representatives, the text of which is carried in 5 U.S.C. 3331:

> "I, A B, do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God."

has been subscribed to in person and filed in duplicate with the Clerk of the House of Representatives by the following Member of the 98th Congress, pursuant to the provisions of 2 U.S.C. 25:

GARY L. ACKERMAN, Seventh District, New York.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV executive communications were taken from the Speaker's table and referred as follows:

455. A letter from the General Counsel, Department of Defense, transmitting a draft of proposed legislation to amend title 10, United States Code, to revise the provisions of such title permitting persons from foreign countries to receive instruction at the U.S. Military Academy, the U.S, Naval Academy, and the U.S. Air Force Academy; to the Committee on Armed Services.

456. A letter from the General Counsel, Department of Defense, transmitting a draft of proposed legislation to authorize appropriations for fiscal year 1984 for the Armed Forces for procurement, for research, development, test, and evaluation, and for operation and maintenance, to prescribe personnel strengths for such fiscal year for the Armed Forces and for civilian employees of the Department of Defense, and for other purposes; to the Committee on Armed Services.

457. A communication from the President of the United States, transmitting a draft of proposed legislation to amend the Bretton Woods Agreements Act to authorize consent to and authorize appropriations for an increase in the U.S. quota in the International Monetary Fund and to authorize appropriations for increased U.S. participation in the General Arrangements to Borrow; to the Committee on Banking, Finance and Urban Affairs.

458. A letter from the General Counsel, Federal Emergency Management Agency, transmitting a draft of proposed legislation to extend 5 years the expiration date of the Defense Production Act of 1950; to the Committee on Banking, Finance and Urban Affairs.

459. A letter from the Director, Defense Security Assistance Agency, transmitting notice of the Army's proposed intention to offer to sell certain defense articles and services to Indonesia (Transmittal No. 83-20), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on Foreign Affairs.

460. A letter from the Director, Defense Security Assistance Agency, transmitting notice of the Navy's proposed intention to offer to sell certain defense articles and services to Saudi Arabia (Transmittal No. 83-21), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on Foreign Affairs.

461. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a draft of proposed legislation to authorize appropriations for fiscal years 1984 and 1985 for the Department of State; to the Committee on Foreign Affairs.

462. A letter from the Acting Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to 1 U.S.C. 112b(a); to the Committee on Foreign Affairs.

463. A letter from the Chairman, Board of Governors of the Federal Reserve System, transmitting a report on the Board's activities under the Freedom of Information Act during calendar year 1983, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

464. A letter from the Deputy Director for Administration, Central Intelligence Agency, transmitting a report on the Agency's activities under the Freedom of Information Act during calendar year 1982, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

465. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a report on the Department's activities under the Freedom of Information Act during calendar year 1982, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

466. A letter from the Chairman, Federal Election Commission, transmitting proposed regulations concerning contributions and expenditures by corporations and labor organizations for nonpartisan communications, pursuant to 2 U.S.C. 438(d)(1); to the Committee on House Administration.

467. A letter from the Assistant Secretary of the Army (Civil Works), transmitting a draft of proposed legislation to authorize appropriations for fiscal years 1984 and 1985, for the Panama Canal Commission to operate and maintain the Panama Canal and for other purposes; to the Committee on Merchant Marine and Fisheries.

468. A letter from the General Counsel, Department of Defense, transmitting a draft of proposed legislation to retain the Defense dependents schools system within that Department; jointly, to the Committees on Armed Services, Education and Labor, and Government Operations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. UDALL: Committee on Interior and Insular Affairs. H.R. 174. A bill entitled the "Gladys Noon Spellman Parkway"; with amendments (Rept. No. 98-12). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Interior and Insular Affairs. H.R. 1149. A bill to designate certain national forest system and other lands in the State of Oregon for inclusion in the National Wilderness Preservation System, and for other purposes; with an amendment (Rept. No. 98-13, Pt. I). Ordered to be printed.

Mr. ROSTENKOWSKI: Committee on Ways and Means. H.R. 1296. A bill to amend the Internal Revenue Code of 1954 to allow any taxpayer to elect to treat for income tax purposes any crop received under a Federal program for removing land from agricultural production as produced by the taxpayer, to allow any taxpayer to elect to defer income on any cancellation under such a program of any price support loan, and to provide that participation in such a program shall not disqualify the taxpayer for the special use valuation of farm real property under section 2032A of such Code; with amendments (Rept. No. 98-14). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Interior and Insluar Affairs. H.R. 1213. A bill to amend certain provisions of law relating to units of the national park system and other public lands, and for other purposes; with an amendment (Rept. No. 98-15). Referred to the Committee of the Whole House on the State of the Union.

Mr. BONIOR: Committee on Rules. H. Res. 113. Resolution providing for the consideration of the bill H.R. 1718 making appropriations to provide emergency expenditures to meet neglected urgent needs to protect and add to the national wealth, resulting in not make-work but productive jobs for women and men and to help provide for the indigent and homeless for the fiscal year 1983, and for other purposes (Rept. No. 98-16). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. WILLIAMS of Montana:

H.R. 1751. A bill to establish in the Department of Labor a Federal Boxing Commission to prescribe and enforce fair labor standards applicable to the conduct of professional boxing and to impose certain other requirements relating to professional boxing, and for other purposes; jointly, to the Committees on Education and Labor and Energy and Commerce.

By Mr. ADDABBO:

H.R. 1752. A bill entitled: "The Natural Gas Policy Act Amendments of 1983"; to the Committee on Energy and Commerce.

By Mr. ALBOSTA:

H.R. 1753. A bill to establish a national insurance program to protect persons storing grain in a public warehouse against losses which may be caused by the insolvency of such warehouse; to the Committee on Agriculture.

By Mr. BEDELL:

H.R. 1754. A bill to amend title II of the Social Security Act and chapters 2 and 21 of the Internal Revenue Code of 1954 to permit ministers and their employers to enter into voluntary agreements for the treatment of such ministers as employed persons; to the Committee on Ways and Means.

By Mr. BEDELL (for himself, Mr. ADDABBO, Mr. CROCKETT, Mr. D'AMOURS, Mr. EDGAR, Mr. FISH, Mr. FLORIO, Mr. GEJDENSON, Mr. HALL of Ohio, Mr. HUGHES, Mr. JONES of North Carolina, Mr. KASTENMEIER, Mr. LAFALCE, Mr. MITCHELL, Mr. MRAZEK, Mr. NOWAK, Mr. OBERSTAR, Mr. OTTINGER, Mr. PANETTA, Mr. ROE, Mr. SEIBERLING, Mr. SMITH of Iowa, Mr. SOLOMON, Mr. SWIFT, Mr. TAUKE, Mr. VENTO, and Mr. WEAVER):

H.R. 1755. A bill to amend the Small Business Act to provide special loan guarantees to small business concerns for the acquisition of motor fuel service stations, to require the divorcement of motor fuel service stations from operation by certain producers and refiners of motor fuels, and for other purposes; jointly, to the Committees on Small Business and Energy and Commerce.

By Mr. BIAGGI:

H.R. 1756. A bill to amend the Internal Revenue Code of 1954 to allow a deduction to individuals who rent their principal residences for a portion of the real property taxes paid or accrued by their landlords; to the Committee on Ways and Means.

By Mr. BURTON of California:

H.R. 1757. A bill to amend the Service Contract Act to prohibit discrimination against employees of predecessor employers under such act, and for other purposes; to the Committee on Education and Labor.

H.R. 1758. A bill to amend the National Labor Relations Act to give employees and performers in the performing arts rights given by section 8(e) of such act to employers and employees in similarly situated industries, and to give to employers and performers in the performing arts the same rights given by section 8(f) of such act to employers and employees in the construction industry, and for other purposes; to the Committee on Education and Labor.

By Mr. COLEMAN of Missouri (for himself, Mrs. COLLINS, Mr. HERTEL of Michigan, Mr. MCNULTY, Mr. OWENS, Mr. PETRI, and Mr. WHITTAKER):

H.R. 1759. A bill to amend the Natural Gas Policy Act of 1978 to freeze natural gas prices at their October 1, 1982, levels, override take-or-pay clauses, and create market incentives in the natural gas industry; to the Committee on Energy and Commerce.

By Mr. CORCORAN (for himself, Mr. BROYHILL, Mr. TAUZIN, Mr. DANNEMEYER, Mr. RALPH M. HALL, Mr. FIELDS, and Mr. BLILEY) (by request):

H.R. 1760. A bill to correct deficiencies in the Natural Gas Policy Act of 1978, to protect natural gas consumers from price increases because of current distortions in the regulated market for natural gas, to provide for a free market for natural gas, to permit natural gas contracts to reflect the change from a regulated to a free market, to eliminate incremental pricing requirements for natural gas, to eliminate certain fuel use restrictions, and for other purposes; to the Committee on Energy and Commerce.

By Mr. D'AMOURS (for himself, Mr. JONES of North Carolina, Mr. FORSYTHE, Mr. STUDDS, Mr. BIAGGI, and Mr. HUGHES):

H.R. 1761. A bill to amend title I of the Marine Protection, Research, and Sanctuaries Act of 1972; to the Committee on Merchant Marine and Fisheries.

By Mr. DAVIS:

H.R. 1762. A bill to amend section 5(d) of Public Law 874, 81st Congress, to prevent taking into account Federal funds made available under that act in the distribution of State educational funds; to the Committee on Education and Labor.

H.R. 1763. A bill to require the Secretary of Health and Human Services to study whether there may be a relationship between the exposure of members of the Armed Forces of the United States to nuclear radiation in Hiroshima and Nagasaki immediately after World War II and various symptoms currently exhibited by such members; to the Committee on Energy and Commerce.

H.R. 1764. A bill to amend Public Law 94-565, relating to payments in lieu of taxes, to provide that the amount of Federal payment to units of local government within a State for certain Federal property located within their jurisdiction shall not be less than the amount which such unit would be eligible to receive from the State if the property were owned by the State rather

than by the United States; to the Committee on Interior and Insular Affairs.

H.R. 1765. A bill to require the Secretary of Commerce to propose a program to compensate persons and States and political subdivisions thereof for damages caused by shoreline erosion arising from the actions of the International Joint Commission with respect to the level of water on the Great Lakes; to the Committee on Public Works and Transportation.

H.R. 1766. A bill to amend title II of the Social Security Act to improve the administration of such title with regard to disability benefits; to the Committee on Ways and Means.

H.R. 1767. A bill to transfer the Coast Guard from the Department of Transportation to the Department of Defense; jointly, to the Committee on Armed Services and Merchant Marine and Fisheries.

By Mr. DELLUMS:

H.R. 1768. A bill to amend the Civil Rights Act of 1964 to eliminate employment discrimination on the basis of military discharge status; to the Committee on Education and Labor.

H.R. 1769. A bill to exonerate and to provide for a general and unconditional amnesty for certain persons who have violated or are alleged to have violated laws in the course of protest against the involvement of the United States in Indochina, and for other purposes; to the Committee on the Judiciary.

By Mr. DREIER of California:

H.R. 1770. A bill to amend the Internal Revenue Code of 1954 to provide that a 14-percent income tax rate shall apply to all individuals, and to repeal all deductions, credits, and exclusions for individuals other than a $2,000 deduction for each personal exemption; to the Committee on Ways and Means.

By Mr. DUNCAN:

H.R. 1771. A bill to amend the Tennessee Valley Authority Act of 1933 to provide a qualified immunity for certain officers and employees of the Tennessee Valley Authority; to the Committee on Public Works and Transportation.

H.R. 1772. A bill to amend the Internal Revenue Code of 1954 to continue to allow mortgage revenue bonds to be issued; to the Committee on Ways and Means.

By Mr. DUNCAN (for himself and Mr. GUARINI):

H.R. 1773. A bill to amend the Internal Revenue Code of 1954 with respect to the unrelated business taxable income of certain nonprofit charitable organizations; to the Committee on Ways and Means.

By Mr. EDGAR (by request):

H.R. 1774. A bill to amend title 38, United States Code, to extend authority of the Administrator of Veterans' Affairs to provide certain contract hospital care and medical services in Puerto Rico, the Virgin Islands, and other territories; to the Committee on Veterans' Affairs.

By Mr. FUQUA (for himself and Mr. LUJAN):

H.R. 1775. A bill to amend the Internal Revenue Code of 1954 to increase and extend the energy investment tax credit for solar, wind, geothermal, and ocean thermal property; to the Committee on Ways and Means.

By Mr. LEVITAS (for himself, Mr. LOTT, Mr. ALEXANDER, Mr. ANDERSON, Mr. ANDREWS of North Carolina, Mr. APPLEGATE, Mr. ARCHER, Mr. BARNARD, Mr. BEREUTER, Mr. BEVILL, Mr. BLILEY, Mr. BONER of Tennessee, Mrs. BOUQUARD, Mr. BROOMFIELD, Mr. BROYHILL, Mr. CAMPBELL, Mr. CLINGER, Mr. COLEMAN of Missouri, Mr. COURTER, Mr. DANIEL B. CRANE, Mr. CRAIG, Mr. D'AMOURS, Mr. DANNEMEYER, Mr. DASCHLE, Mr. DAUB, Mr. DREIER, Mr. ENGLISH, Mr. ERLENBORN, Mr. FAZIO, Mr. FORSYTHE, Mr. FRENZEL, Mr. FROST, Mr. FUQUA, Mr. GILMAN, Mr. GINGRICH, Mr. GRADISON, Mr. GUNDERSON, Mr. HAMILTON, Mr. HANCE, Mr. HANSEN of Idaho, Mr. HATCHER, Mr. HEFNER, Mr. HIGHTOWER, Mr. HILER, Mr. HUBBARD, Mr. HUTTO, Mr. IRELAND, Mr. JENKINS, Mr. KASICH, Mr. KILDEE, Mr. KINDNESS, Mr. KRAMER, Mr. LAGOMARSINO, Mr. LANTOS, Mr. LEACH of Iowa, Mr. LENT, Mr. LIVINGSTON, Mr. LOEFFLER, Mr. LUKEN, Mr. McDONALD, Mr. McGRATH, Mr. McKINNEY, Mr. MARLENEE, Mr. MARTIN of New York, Mr. MARTIN of North Carolina, Mrs. MARTIN of Illinois, Mr. MAZZOLI, Mr. MILLER of Ohio, Mr. MOLLOHAN, Mr. MOODY, Mr. MOORE, Mr. MURPHY, Mr. MYERS, Mr. NEAL, Mr. NELSON, Mr. NICHOLS, Mr. PARRIS, Mr. PASHAYAN, Mr. PETRI, Mr. PRICE, Mr. QUILLEN, Mr. RATCHFORD, Mr. RAY, Mr. RITTER, Mr. ROBINSON, Mr. ROE, Mr. ROEMER, Mr. ROTH, Mr. ROWLAND, Mr. RUDD, Mr. SENSENBRENNER, Mr. SHELBY, Mr. SKEEN, Mr. DENNY SMITH, Mrs. SNOWE, Mr. SOLOMON, Mr. SPENCE, Mr. STANGELAND, Mr. STUMP, Mr. SUNDQUIST, Mr. TALLON, Mr. THOMAS of Georgia, Mr. WALKER, Mr. WEBER, Mr. WHITTAKER, Mr. WINN, and Mr. WORTLEY):

H.R. 1776. A bill to amend title 5 of the United States Code to improve agency rulemaking by expanding the opportunities for public participation, by creating procedures for congressional review of agency rules, and by expanding judicial review, and for other purposes; jointly, to the Committees on the Judiciary and Rules.

By Mr. FLORIO:

H.R. 1777. A bill to amend the war powers resolution to require specific authorization for the introduction of U.S. Armed Forces into El Salvador for combat; to the Committee on Foreign Affairs.

By Mr. FLORIO (for himself, Mr. DOWDY of Mississippi, Mr. ECKART, Mr. LENT, Ms. MIKULSKI, Mr. RICHARDSON, Mr. RITTER, and Mr. TAUZIN):

H.R. 1778. A bill to establish a Congressional Advisory Commission on Boxing; to the Committee on Energy and Commerce.

By Mr. GEJDENSON:

H.R. 1779. A bill to amend the Small Business Act to repeal the credit elsewhere test in determining the interest rates applicable to homeowners and businesses on disaster loans; to the Committee on Small Business.

By Mr. HANSEN of Idaho:

H.R. 1780. A bill entitled: "The Willow Creek Winter Stock Water Supply Act"; to the Committee on the Judiciary.

By Mr. HEFNER (for himself and Mr. BRITT):

H.R. 1781. A bill to amend the Internal Revenue Code of 1954 to repeal income tax withholding on interest; to the Committee on Ways and Means.

By Mr. HERTEL of Michigan:

H.R. 1782. A bill to amend section 924 of title 18 of the United States Code to provide mandatory minimum penalties for the illegal transfer of firearms to individuals who use those firearms to commit serious crimes, and to expand and strengthen the application of the existing mandatory minimum penalty for use of firearms in connection with the commission of Federal felonies; to the Committee on the Judiciary.

H.R. 1783. A bill to amend title 18 of the United States Code to regulate certain transactions in valuables in order to facilitate investigations of theft and prevent fencing of stolen property; to the Committee on the Judiciary.

By Mr. CONYERS:

H.R. 1784. A bill to raise the overtime compensation requirements of the Fair Labor Standards Act of 1938 from 1½ times to 2 times the regular rate; to reduce for overtime purposes the numbers of hours in a workweek from 40 hours to 32 hours in 6 steps over 8 years; to prohibit the scheduling of overtime without the consent of the worker; and for other purposes; to the Committee on Education and Labor.

By Mr. HERTEL of Michigan:

H.R. 1785. A bill to amend title 38, United States Code, to provide that veterans' compensation or pension benefits to which an inmate of a State penal institution or State hospital is otherwise entitled may be paid directly to the State as reimbursement for costs incurred in the care of such inmate during the imprisonment or confinement, if the State law requires inmates in such institutions or hospitals to make reimbursement for such costs; to the Committee on Veterans' Affairs.

H.R. 1786. A bill to amend title II of the Social Security Act to provide that social security benefits to which an inmate of a State penal institution or State hospital is otherwise entitled may be paid directly to the State as reimbursement for costs incurred in the care of such inmate during his or her imprisonment or confinement, if the State law requires inmates in such institutions or hospitals to make reimbursement for such costs; to the Committee on Ways and Means.

By Mr. HUCKABY (for himself and Mr. STANGELAND):

H.R. 1787. A bill to provide authority for activities to develop, maintain, and expand markets for U.S. agricultural commodities, and for other purposes; jointly, to the Committees on Agriculture and Foreign Affairs.

By Mr. JACOBS:

H.R. 1788. A bill to amend Public Law 85-745 to provide that a former President may receive monetary allowances under that law only after waiving any rights to receive any other annuity or pension to which the former President would otherwise be entitled under any other Federal law; to the Committee on Post Office and Civil Service.

H.R. 1789. A bill to include home delivery of children's publications in the existing rates for children's publications sent to schools; to the Committee on Post Office and Civil Service.

H.R. 1790. A bill to amend the Internal Revenue Code of 1954 to increase the Federal excise tax on distilled spirits and to provide that the revenues from the additional tax shall be deposited in the Federal hospital insurance trust fund under the Social Security Act; to the Committee on Ways and Means.

H.R. 1791. A bill to amend title II of the Social Security Act to require actual dependency as a condition of a stepchild's eligibility for child's insurance benefits, thereby preventing an insured individual's stepchildren from qualifying for such benefits on his or her wage record—and thereby reducing the benefits of his or her natural

children—if they are being supported by their natural parent; to the Committee on Ways and Means.

H.R. 1792. A bill to amend title XVIII of the Social Security Act for the purpose of mandating guidelines with respect to the return of unused home dialysis supplies; jointly, to the Committees on Ways and Means and Energy and Commerce.

H.R. 1793. A bill to eliminate the exemption for Congress or for the United States from the application of certain provisions of Federal law relating to employment, privacy, and social security, and for other purposes; jointly, to the Committees on Education and Labor, Government Operations, and Ways and Means.

H.R. 1794. A bill to amend the Motor Vehicle Information and Cost Savings Act to require Environmental Protection Agency automobile fuel economy tests to be based upon actual road conditions; to the Committee on Energy and Commerce.

By Mr. JEFFORDS, (for himself, Mr. GUNDERSON, Mr. MADIGAN, Mr. ROBERTS, Mr. AKAKA, Mr. HANSEN of Idaho, Mr. HEFTEL of Hawaii, Mr. STUMP, Mr. STENHOLM, and Mr. EVANS of Iowa):

H.R. 1795. A bill entitled "The Federal Meat Inspection Act Amendments of 1983"; to the Committee on Agriculture.

By Mr. LEHMAN of Florida:

H.R. 1796. A bill to amend title 5, United States Code, to provide that any Federal employee who, at the time of retirement, does not elect a reduced annuity in order to provide a survivor annuity to a spouse or other person may make such an election within 1 year after retiring, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. LONG of Maryland (for himself, Mr. ADDABBO, Mr. BARNES, Mr. BOLAND, Mr. BROWN of California, Mr. DIXON, Mr. EDGAR, Mr. FAUNTROY, Mr. HOYER, Mr. JACOBS, Mr. LEHMAN of Florida, Mr. LENT, Mr. MCGRATH, Mr. MATSUI, Mr. MAVROULES, Ms. MIKULSKI, Mr. MINETA, Mr. MITCHELL, Mr. MOAKLEY, Mr. MORRISON of Connecticut, Mr. MRAZEK, Mr. NEAL, Mr. NOWAK, Mr. OTTINGER, Mr. RODINO, Mrs. ROUKEMA, Mr. SMITH of Florida, Mr. STOKES, Mr. SUNIA, Mr. WEISS, Mr. WILSON, Mr. LANTOS, Mr. YATES, Mr. ST GERMAIN, Mr. ROTH, Mr. BENNETT, Mr. CORRADA, Mr. BERMAN, Mr. GUARINI, Mr. KASTENMEIER, Mr. PORTER, Mr. MARKEY, Mr. DWYER of New Jersey, Mr. RUSSO, Mr. WAXMAN, Mr. GRAY, Mr. MINISH, Mr. EDWARDS of California, Mr. VENTO, Mr. CLAY, Mr. BONIOR of Michigan, Mr. TORRICELLI, Mr. ROYBAL, Mrs. SCHNEIDER, and Mr. WHITEHURST):

H.R. 1797. A bill to end the use of steel-jaw leghold traps on animals in the United States and abroad; to the Committee on Energy and Commerce.

By Mr. LONG of Louisiana:

H.R. 1798. A bill to amend title 28 of the United States Code to set up a regime of repose for certain archeological and ethnological material and cultural property; to the Committee on the Judiciary.

By Mr. MCNULTY:

H.R. 1821. A bill to amend title 38, United States Code, to authorize the Administrator of the Veterans' Administration to make direct low-interest loans to veterans eligible

for specially adapted housing assistance; to the Committee on Veterans' Affairs.

By Mr. SPENCE:

H.R. 1822. A bill to amend the Agricultural Act of 1949 to modify the dairy price support program for the 1983 through 1985 fiscal years; to the Committee on Agriculture.

By Mr. WALGREN:

H.R. 1823. A bill to provide for continuation of health insurance for workers who lose such insurance by reason of unemployment; jointly, to the Committees on Ways and Means and Energy and Commerce.

By Mr. WAXMAN (for himself, Mr. SCHEUER, Mr. WYDEN, Mr. OTTINGER, Mr. WHITTAKER, Mr. SYNAR, Mr. RITTER, Mr. HANSEN of Idaho, Mr. HANSEN of Utah, Mr. WEISS, Mr. OBERSTAR, Mr. WEAVER, Mr. GIBBONS, Mr. HEFTEL of Hawaii, Mr. WATKINS, Mr. FAUNTROY, Mr. RATCHFORD, Mr. D'AMOURS, Mr. YATES, Mr. LOWRY of Washington, Mr. EDWARDS of California, Mr. LANTOS, Mr. LEHMAN of Florida, Mr. MILLER of California, Mr. St Germain, Mr. BEILENSON, Mr. STARK, Mr. SIMON, Mr. EDGAR, Mr. SUNIA, and Mrs. COLLINS):

H.R. 1824. A bill to establish a national program to increase the availability of information on the health consequences of smoking, to amend the Federal Cigarette Labeling and Advertising Act to change the label requirements for cigarettes, and for other purposes; to the Committee on Energy and Commerce.

By Mr. WHITTEN:

H.R. 1825. A bill to provide soybean producers with the same protection from natural disasters as producers of wheat and feed grains; to the Committee on Agriculture.

H.R. 1826. A bill to restore the U.S. share of world trade, to provide for payment in kind which shall be considered a payment to American farmers for their financial losses suffered by reason of the Government having held American farm commodities off world markets, and for other purposes; to the Committee on Agriculture.

H.R. 1827. A bill to establish the Reconstruction Finance Corporation to make loans and loan guarantees to individuals or concerns engaged in industry, agriculture, and commerce, who would otherwise be unable to obtain needed financing or refinancing essential for continued operation thereby preventing unemployment and resulting disruption of the economy, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

H.R. 1828. A bill to amend the Federal Rules of Civil Procedure to restore the right to a jury trial in certain cases involving the exercise by the United States of the power of eminent domain; to the Committee on the Judiciary.

H.R. 1829. A bill to protect the national security, protect the economic well-being of the American people including the Nation's present supplies and undeveloped sources of energy, fuel, food, and fiber from damage due to arbitrary and unsound regulation, order, or decision issued by any executive department, agency, or commission, and for other purposes; to the Committee on the Judiciary.

H.R. 1830. A bill to abolish the U.S. Postal Service, to repeal the Postal Reorganization Act, to reenact the former provisions of title 39, United States Code, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 1831. A bill to amend title 39 of the United States Code to prohibit the Postal Service from limiting regular daily mail delivery to fewer than 6 days each week, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 1832. A bill to authorize the Secretary of the Army, acting through the Chief of Engineers, to pay claims for damage to a water well, spring, or artesian well used or susceptible for use as a water supply, if construction or operation of any segment of the Tennessee-Tombigbee Waterway project is the cause of said damage; to the Committee on Public Works and Transportation.

H.R. 1833. A bill directing a study and report on requiring proper lighting of boat landing ramps adjacent to waters subject to the jurisdiction of the United States, and for other purposes; to the Committee on Public Works and Transportation.

H.R. 1834. A bill to provide for determination through judicial proceedings of claims for compensation on account of disability or death resulting from disease or injury incurred or aggravated in line of duty while serving in the active military or naval service, including those who served during peace-time, and for other purposes; to the Committee on Veterans' Affairs.

H.R. 1835. A bill to protect funds invested in series E, U.S. savings bonds from inflation and to encourage persons to provide for their own security; to the Committee on Ways and Means.

H.R. 1836. A bill to amend the Internal Revenue Code of 1954 to allow estates required to file estate tax returns before July 13, 1978, the date on which regulations under section 2032A of such code were proposed, to elect the valuation of certain farm and other real property under section 2032A of such code within 90 days after the enactment of the amendments to such code proposed by this bill; to the Committee on Ways and Means.

H.R. 1837. A bill to amend the Internal Revenue Code of 1954 to allow a deduction for expenses incurred by a taxpayer in making repairs and improvements to his residence, and to allow the owner of rental housing to amortize at an accelerated rate the cost of rehabilitating or restoring such housing; to the Committee on Ways and Means.

H.R. 1838. A bill to amend the Internal Revenue Code to remove the limitations on the amount of medical and dental expenses which may be deducted, to permit taxpayers to deduct such expenses, to arrive at their adjusted gross income, and for other purposes; to the Committee on Ways and Means.

H.R. 1839. A bill to amend the Internal Revenue Code of 1954 with respect to the determination of whether certain charitable organizations are publicly supported; to the Committee on Ways and Means.

H.R. 1840. A bill to amend the Internal Revenue Code of 1954 to provide that the deduction for medical and dental expenses shall be allowable without regard to whether such expenses exceed certain percentages of the taxpayer's adjusted gross income and to provide that such deduction shall be allowable whether or not the taxpayer itemizes deductions; to the Committee on Ways and Means.

By Mr. WOLF (for himself, Mr. WHITEHURST, and Mr. PARRIS):

H.R. 1841. A bill to amend chapter 54 of title 5, United States Code, to reform the merit pay system; to the Committee on Post Office and Civil Service.

By Mr. YATRON:

H.R. 1842. A bill to require maintenance of the traditional 10-to-7 ratio in U.S. military assistance for Turkey and Greece; to the Committee on Foreign Affairs.

By Mr. YATRON (for himself and Mr. BROOMFIELD):

H.R. 1843. A bill to prohibit the use on Cyprus of military equipment provided to Turkey by the United States; to the Committee on Foreign Affairs.

By Mr. YOUNG of Florida:

H.R. 1844. A bill to amend title 5 and title 44, United States Code, to lengthen the time period between the publication of a Federal rule and the effective date of such rule, and the time period between the publication of notice of a hearing and the beginning of such hearing; to the Committee on the Judiciary.

H.R. 1845. A bill to require that the U.S. Government prepare and make public annual consolidated financial statements utilizing the accrual method of accounting, and for other purposes; to the Committee on Government Operations.

H.R. 1846. A bill to require public disclosure by certain recipients of Federal funds of information required to be kept by such recipients as a condition of receiving such funds; to the Committee on Government Operations.

H.R. 1847. A bill to amend title 5 of the United States Code to establish a uniform procedure for congressional review of agency rules which may be contrary to law or inconsistent with congressional intent, to expand opportunities for public participation in agency rulemaking, and for other purposes; jointly, to the Committees on the Judiciary and Rules.

By Mr. ZABLOCKI (for himself and Mr. BROOMFIELD) (by request):

H.R. 1848. A bill to authorize supplemental international security assistance for urgent purposes for the fiscal year 1983, and for other purposes; to the Committee on Foreign Affairs.

H.R. 1849. A bill to authorize supplemental assistance to aid Lebanon in rebuilding its economy and Armed Forces, and for other purposes; to the Committee on Foreign Affairs.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 1718

By Mr. COUGHLIN:

—On page —, after line —, insert the following new section:

Of the total budget authority provided in this Title which is not required by law to be obligated by formula or by geographic area, at least ninety percentum shall be made available only for projects and activities in labor market areas where, as of the date of enactment of this Act, and as determined by the Bureau of Labor Statistics, the unemployment rate is at least eighty percent of the national unemployment rate.

By Mr. EDGAR:

—On page 31, after line 9, insert the following general provision:

TARGETING JOBS TO AREAS OF HIGH UNEMPLOYMENT

Of the budget authority provided in this title, at least seventy-five percentum shall be made available only for projects and activities in civil jurisdictions with high unemployment, or in political units or in pockets of poverty that are currently or should meet the criteria to be eligible under the urban development action grant program administered by the Department of Housing and Urban Development. For purposes of this section, a "Civil Jurisdiction" is:

(1) A city of 50,000 or more population on the basis of the most recently available Bureau of the Census estimates; or

(2) A town or township in the State of New Jersey, New York, Michigan, or Pennsylvania of 50,000 or more population and which possesses powers and functions similar to those of cities; or

(3) A county, except those counties which contain any of the types of civil jurisdictions defined in paragraph (1) or (2) of this section; or

(4) A "Balance of County" consisting of a county less any component cities and townships identified in paragraph (1) or (2) of this section; or

(5) A county equivalent which is a town in the States of Massachusetts, Rhode Island, and Connecticut.

(6) A portion of a city or jurisdiction that meets the pockets of poverty criteria as defined by the Department of Housing and Urban Development.

For purposes of this section, a "Civil Jurisdiction With High Unemployment" is a civil jurisdiction that has been so classified by the Assistant Secretary for Employment and Training, United States Department of Labor.

The Assistant Secretary shall classify a civil jurisdiction as having high unemployment whenever, as determined by the Bureau of Labor Statistics, the civil jurisdiction has had an average unemployment rate over the previous 12 months no less than 90 percent of the national average unemployment rate during the same period or if the civil jurisdiction is currently or should become designated a labor surplus area by the Department of Labor.

The Assistant Secretary, upon petition submitted by the appropriate state agency, may classify a civil jurisdiction as having high unemployment whenever the civil jurisdiction has experienced or is about to experience a sudden economic dislocation resulting in job loss that is significant both in terms of the number of jobs eliminated and the effect upon the employment rate of the area.

The Assistant Secretary shall publish a list of civil jurisdictions with high unemployment, together with geographic descriptions thereof, within 30 days after enactment of this act, and on a monthly basis thereafter.

The provisions of this section shall not apply to any program or portion of a program under which funds are allocated by formula, or for humanitarian aid and training programs, including emergency mortgage assistance; Indian health facilities; operation of Indian program; community and home health services; maternal and child health services; Head Start; feeding programs for women, infants and children (WIC); and food distribution and emergency shelters.

By Mr. HOWARD:

—Page 7, strike out line 20 and all that follows through line 2 on page 8 (relating to mass transportation) and insert in lieu thereof the following:

TO SPEED UP IMPROVEMENT OF MASS TRANSPORTATION

To accelerate the construction, modernization and improvement of urban mass transportation systems, to increase the mobility of the urban work force which will result in productive jobs, an additional amount of $171,000,000, to remain available until expended, for "Urban discretionary grants", to be obligated at the discretion of the Secretary of Transportation in accordance with section 3 of the Urban Mass Transportation Act of 1964.

The Congress disapproves the proposed deferral of budget authority in the amount of $229,000,000 for the Mass Transportation Capital Fund (deferral numbered D83-59), as set forth in the President's special message which was transmitted to the Congress on February 1, 1983. This disapproval shall be effective on the date of enactment of this Act and the amount of the proposed deferral disapproved herein shall be made available for obligation.

By Mr. OTTINGER:

—On page 31, after line 9, insert the following:

"LOW-INCOME ENERGY ASSISTANCE PROGRAM

"There is appropriated an additional amount for carrying out title XXVI of the Omnibus Budget Reconciliation Act of 1981, $100,000,000 to remain available until expended."

—On page 22, after line 6, insert the following:

"SCHOOLS AND HOSPITALS ENERGY CONSERVATION

"There is appropriated an additional amount for 'Energy Conservation,' Department of Energy, $150,000,000, to remain available until expended for the Energy Conservation Program for Schools and Hospitals."

By Ms. OAKAR:

—(1) Add at the end thereof the following:

TITLE III—INTEREST ON STATE LOANS

SEC. 301. (a) Paragraph (3) of section 1202(b) of the Social Security Act is amended by adding at the end thereof the following new subparagraph:

"(D)(i) In the case of any interest which (but for this subparagraph) would be required to be paid under this subsection during any high unemployment month, such interest shall not be required to be paid before the last day of the first month thereafter which is not a high unemployment month. Any interest the time for payment of which is deferred by the preceding sentence shall bear interest in the same manner as if it were an advance made on the day on which it would have been required to be paid but for this subparagraph.

"(ii) For purposes of clause (i), the term 'high unemployment month' means any calendar month if the rate of national unemployment (seasonally adjusted) for the immediately preceding calendar month equals or exceeds 8.5 percent."

(b) The amendment made by subsection (a) shall apply to amounts required to be paid after the date of the enactment of this Act.

—(2) Add at the end thereof the following:

TITLE III—INTEREST ON STATE LOANS

SEC. 301. (a) Paragraph (3) of section 1202(b) of the Social Security Act is amended by adding at the end thereof the following new subparagraph:

"(D)(i) In the case of any interest which (but for this subparagraph) would be required to be paid under this subsection, such interest shall not be required to be paid for a period of two years from the date of enactment of this Act. Any interest the time for payment of which is deferred by the preceding sentence shall bear interest in the same manner as if it were an advance on the day on which it would have been required to be paid but for this subparagraph.

(b) The amendment made by subsection (a) shall apply to amounts required to be paid after the date of enactment of this Act.

—(3) Add at the end thereof the following:

TITLE III—INTEREST ON STATE LOANS

SEC. 301. (a) Paragraph (3) of section 1202(b) of the Social Security Act is amended by adding at the end thereof the following new subparagraph:

"(D)(i) In the case of any interest which (but for this subparagraph) would be required to be paid under this subsection, such interest shall not be required to be paid for a period of one year from the date of enactment of this Act. Any interest the time for payment of which is deferred by the preceding sentence shall bear interest in the same manner as if it were an advance on the day on which it would have been required to be paid but for this subparagraph.

(b) The amendment made by subsection (a) shall apply to amounts required to be paid after the date of enactment of this Act.

By Mr. OBEY:

(Page and line numbers refer to appropriations' full committee print of February 25, 1983, as reported by the committee.)

COMMUNITY HEALTH CENTERS

—Page 24, line 10, strike out "$30,000,000" and insert in lieu thereof "$78,000,000".

Page 24, line 14, insert "up to" after "That" and insert ", to the extent practicable," after "shall".

Page 24, line 15, insert before the period the following: ": *Provided further,* That each center may apply up to 20 percent of these funds provided to the center for the purchase (at rates not exceeding those prevailing under the applicable State plan approved under title XIX of the Social Security Act) of inpatient hospital services for delivery and postpartum care to pregnant women and infants who have no other source of payment for the care".

MATERNAL AND CHILD HEALTH

Page 24, line 20, strike out "$10,000,000" and insert in lieu thereof "$110,000,000".

Page 24, beginning on line 24, strike out "in those States experiencing high levels of unemployment" and inserting in lieu thereof the following: "and shall be allotted among the States based on the product, for each State, of the number of children under six years of age in the State and the unemployment rate in that State".

Page 25, after line 4, insert the following new paragraph:

INCREASING ASSISTANCE FOR PUBLIC HOSPITALS AND EMERGENCY ROOM SERVICES

(PREVENTIVE HEALTH SERVICES)

For an additional amount for allotments to States under part A of title XIX of the Public Health Service Act, $52,000,000, to be allotted among the States on the basis of the number of unemployed individuals in each of the States: *Provided,* That funds provided herein may only be used to provide financial assistance to public hospitals and to provide financial assistance to community hospitals to compensate for some portion of free emergency room services. *Provided further,* That funds provided herein may only be used to provide services to persons unable to pay for them: *Provided further,* That no grant shall be made to a hospital unless the hospital offers assurances that it will use such amounts in addition to rather than in lieu of existing Federal, State, or local funds currently available for these purposes.

By Mr. SHAW:

—Add at the end of the bill the following new section:

"SEC. . Section 302 of the Department of Transportation and Related Agencies Appropriations Act, 1983 (Public Law 97-369) is amended by striking "$600,000,000" and substituting in lieu thereof "$800,000,000".

By Mr. WISE:

—On page 18, line 11, delete the period, insert a comma followed by the language: "provided that no appropriation or fund made available by this bill be used for the Stonewall-Jackson Lake project, West Virginia."

REGULATION OF LOBBYING ACT

In compliance with Public Law 601, 79th Congress, title III, Regulation of Lobbying Act, section 308(b), which provides as follows:

(b) All information required to be filed under the provisions of this section with the Clerk of the House of Representatives and the Secretary of the Senate shall be compiled by said Clerk and Secretary, acting jointly, as soon as practicable after the close of the calendar quarter with respect to which such information is filed and shall be printed in the CONGRESSIONAL RECORD.

The Clerk of the House of Representatives and the Secretary of the Senate jointly submit their report of the compilation required by said law and have included all registrations and quarterly reports received.

REGISTRATIONS

The following registrations were submitted for the fourth calendar quarter 1982:

(NOTE.—The form used for report is reproduced below. In the interest of economy in the RECORD, questions are not repeated, only the essential answers are printed, and are indicated by their respective headings.)

FILE ONE COPY WITH THE SECRETARY OF THE SENATE AND FILE TWO COPIES WITH THE CLERK OF THE HOUSE OF REPRESENTATIVES:

This page (page 1) is designed to supply identifying data; and page 2 (on the back of this page) deals with financial data.

PLACE AN "X" BELOW THE APPROPRIATE LETTER OR FIGURE IN THE BOX AT THE RIGHT OF THE "REPORT" HEADING BELOW:

"PRELIMINARY" REPORT ("Registration"): To "register," place an "X" below the letter "P" and fill out page 1 only.

"QUARTERLY" REPORT: To indicate which one of the four calendar quarters is covered by this Report, place an "X" below the appropriate figure. Fill out both page 1 and page 2 and as many additional pages as may be required. The first additional page should be numbered as page "3," and the rest of such pages should be "4," "5," "6," etc. Preparation and filing in accordance with instructions will accomplish compliance with all quarterly reporting requirements of the Act.

Year: 19.....

REPORT

PURSUANT TO FEDERAL REGULATION OF LOBBYING ACT

P	QUARTER			
	1st	2d	3d	4th
(Mark one square only)				

NOTE ON ITEM "A".—(a) IN GENERAL. This "Report" form may be used by either an organization or an individual, as follows:
(i) "Employee".—To file as an "employee", state (in Item "B") the name, address, and nature of business of the "employer". (If the "employee" is a firm [such as a law firm or public relations firm], partners and salaried staff members of such firm may join in filing a Report as an "employee".)
(ii) "Employer".—To file as an "employer", write "None" in answer to Item "B".
(b) SEPARATE REPORTS. An agent or employee should not attempt to combine his Report with the employer's Report:
(i) Employers subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their agents or employees.
(ii) Employees subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their employers.

A. ORGANIZATION OR INDIVIDUAL FILING:
1. State name, address, and nature of business.

2. If this Report is for an Employer, list names of agents or employees who will file Reports for this Quarter.

NOTE ON ITEM "B".—*Reports by Agents or Employees.* An employee is to file, each quarter, as many Reports as he has employers, except that: (*a*) If a particular undertaking is jointly financed by a group of employers, the group is to be considered as one employer, but all members of the group are to be named, and the contribution of each member is to be specified; (*b*) if the work is done in the interest of one person but payment therefor is made by another, a single Report—naming both persons as "employers"—is to be filed each quarter.

B. EMPLOYER.—State name, address, and nature of business. If there is no employer, write "None."

NOTE ON ITEM "C".—(*a*) The expression "in connection with legislative interests," as used in this Report, means "in connection with attempting, directly or indirectly, to influence the passage or defeat of legislation." "The term 'legislation' means bills, resolutions, amendments, nominations, and other matters pending or proposed in either House of Congress, and includes any other matter which may be the subject of action by either House"—§302(e).
(*b*) Before undertaking any activities in connection with legislative interests, organizations and individuals subject to the Lobbying Act are required to file a "Preliminary" Report (Registration).
(*c*) After beginning such activities, they must file a "Quarterly" Report at the end of each calendar quarter in which they have either received or expended anything of value in connection with legislative interests.

C. LEGISLATIVE INTERESTS, AND PUBLICATIONS in connection therewith:

1. State approximately how long legislative interests are to continue. If receipts and expenditures in connection with legislative interests have terminated, ☐ place an "X" in the box at the left, so that this Office will no longer expect to receive Reports.

2. State the general legislative interests of the person filing and set forth the *specific* legislative interests by reciting: (*a*) Short titles of statutes and bills; (*b*) House and Senate numbers of bills, where known; (*c*) citations of statutes, where known; (*d*) whether for or against such statutes and bills.

3. In the case of those publications which the person filing has caused to be issued or distributed in connection with legislative interests, set forth: (*a*) Description, (*b*) quantity distributed; (*c*) date of distribution, (*d*) name of printer or publisher (if publications were paid for by person filing) or name of donor (if publications were received as a gift).

(Answer items 1, 2, and 3 in the space below. Attach additional pages if more space is needed)

4. If this is a "Preliminary" Report (Registration) rather than a "Quarterly" Report, state below what the nature and amount of anticipated expenses will be; and if for an agent or employee, state also what the daily, monthly, or annual rate of compensation is to be. If this is a "Quarterly" Report, disregard this item "C4" and fill out items "D" and "E" on the back of this page. Do not attempt to combine a "Preliminary" Report (Registration) with a "Quarterly" Report.

AFFIDAVIT

QUARTERLY REPORTS*

*All alphanumeric characters and monetary amounts refer to receipts and expenditures on page 2, paragraphs D and E of the Quarterly Report Form.

The following quarterly reports were submitted for the fourth calendar quarter 1982:

(NOTE.—The form used for reporting is reproduced below. In the interest of economy in the RECORD, questions are not repeated, only the essential answers are printed, and are indicated by their respective headings.)

FILE ONE COPY WITH THE SECRETARY OF THE SENATE AND FILE TWO COPIES WITH THE CLERK OF THE HOUSE OF REPRESENTATIVES:

This page (page 1) is designed to supply identifying data; and page 2 (on the back of this page) deals with financial data.

PLACE AN "X" BELOW THE APPROPRIATE LETTER OR FIGURE IN THE BOX AT THE RIGHT OF THE "REPORT" HEADING BELOW:

"PRELIMINARY" REPORT ("Registration"): To "register," place an "X" below the letter "P" and fill out page 1 only.

"QUARTERLY" REPORT: To indicate which one of the four calendar quarters is covered by this Report, place an "X" below the appropriate figure. Fill out both page 1 and page 2 and as many additional pages as may be required. The first additional page should be numbered as page "3," and the rest of such pages should be "4," "5," "6," etc. Preparation and filing in accordance with instructions will accomplish compliance with all quarterly reporting requirements of the Act.

Year: 19.....

REPORT

PURSUANT TO FEDERAL REGULATION OF LOBBYING ACT

P	QUARTER			
	1st	2d	3d	4th
(Mark one square only)				

NOTE ON ITEM "A".—(a) IN GENERAL. This "Report" form may be used by either an organization or an individual, as follows:
(i) "Employee".—To file as an "employee", state (in Item "B") the name, address, and nature of business of the "employer". (If the "employee" is a firm [such as a law firm or public relations firm], partners and salaried staff members of such firm may join in filing a Report as an "employee".)
(ii) "Employer".—To file as an "employer", write "None" in answer to Item "B".
(b) SEPARATE REPORTS. An agent or employee should not attempt to combine his Report with the employer's Report:
(i) Employers subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their agents or employees.
(ii) Employees subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their employers.

A. ORGANIZATION OR INDIVIDUAL FILING:

1. State name, address, and nature of business.

2. If this Report is for an Employer, list names of agents or employees who will file Reports for this Quarter.

NOTE ON ITEM "B".—*Reports by Agents or Employees.* An employee is to file, each quarter, as many Reports as he has employers, except that: (a) If a particular undertaking is jointly financed by a group of employers, the group is to be considered as one employer, but all members of the group are to be named, and the contribution of each member is to be specified; (b) if the work is done in the interest of one person but payment therefor is made by another, a single Report—naming both persons as "employers"—is to be filed each quarter.

B. EMPLOYER.—State name, address, and nature of business. If there is no employer, write "None."

NOTE ON ITEM "C".—(a) The expression "in connection with legislative interests," as used in this Report, means "in connection with attempting, directly or indirectly, to influence the passage or defeat of legislation." "The term 'legislation' means bills, resolutions, amendments, nominations, and other matters pending or proposed in either House of Congress, and includes any other matter which may be the subject of action by either House"—§302(e).
(b) Before undertaking any activities in connection with legislative interests, organizations and individuals subject to the Lobbying Act are required to file a "Preliminary" Report (Registration).
(c) After beginning such activities, they must file a "Quarterly" Report at the end of each calendar quarter in which they have either received or expended anything of value in connection with legislative interests.

C. LEGISLATIVE INTERESTS, AND PUBLICATIONS in connection therewith:

1. State approximately how long legislative interests are to continue. If receipts and expenditures in connection with legislative interests have terminated, place an "X" in the box at the left, so that this Office will no longer expect to receive Reports. ☐

2. State the general legislative interests of the person filing and set forth the *specific* legislative interests by reciting: (a) Short titles of statutes and bills; (b) House and Senate numbers of bills, where known; (c) citations of statutes, where known; (d) whether for or against such statutes and bills.

3. In the case of those publications which the person filing has caused to be issued or distributed in connection with legislative interests, set forth: (a) Description, (b) quantity distributed; (c) date of distribution, (d) name of printer or publisher (if publications were paid for by person filing) or name of donor (if publications were received as a gift).

(Answer items 1, 2, and 3 in the space below. Attach additional pages if more space is needed)

4. If this is a "Preliminary" Report (Registration) rather than a "Quarterly" Report, state below what the nature and amount of anticipated expenses will be; and if for an agent or employee, state also what the daily, monthly, or annual rate of compensation is to be. If this is a "Quarterly" Report, disregard this item "C4" and fill out items "D" and "E" on the back of this page. Do not attempt to combine a "Preliminary" Report (Registration) with a "Quarterly" Report.

AFFIDAVIT

[Omitted in printing]

PAGE 1

NOTE ON ITEM "D."—(a) *In General.* The term "contribution" includes *anything of value.* When an organization or individual uses printed or duplicated matter in a campaign attempting to influence legislation, money received by such organization or individual—for such printed or duplicated matter—is a "contribution." "The term 'contribution' includes a gift, subscription, loan, advance, or deposit of money, or anything of value, and includes a contract, promise, or agreement, whether or not legally enforceable, to make a contribution"—Section 302(a) of the Lobbying Act.

(b) IF THIS REPORT IS FOR AN EMPLOYER.—(i) *In General.* Item "D" is designed for the reporting of all receipts from which expenditures are made, or will be made, in accordance with legislative interests.

(ii) *Receipts of Business Firms and Individuals.*—A business firm (or individual) which is subject to the Lobbying Act by reason of expenditures which it makes in attempting to influence legislation—but which has no funds to expend except those which are available in the ordinary course of operating a business not connected in any way with the influencing of legislation—will have no receipts to report, even though it does have expenditures to report.

(iii) *Receipts of Multipurpose Organizations.*—Some organizations do not receive any funds which are to be expended solely for the purpose of attempting to influence legislation. Such organizations make such expenditures out of a general fund raised by dues, assessments, or other contributions. The percentage of the general fund which is used for such expenditures indicates the percentage of dues, assessments, or other contributions which may be considered to have been paid for that purpose. Therefore, in reporting receipts, such organizations may specify what that percentage is, and report their dues, assessments, and other contributions on that basis. However, each contributor of $500 or more is to be listed, regardless of whether the contribution was made solely for legislative purposes.

(c) IF THIS REPORT IS FOR AN AGENT OR EMPLOYEE.—(i) *In General.* In the case of many employees, all receipts will come under Items "D 5" (received for services) and "D 12" (expense money and reimbursements). In the absence of a clear statement to the contrary, it will be presumed that your employer is to reimburse you for all expenditures which you make in connection with legislative interests.

(ii) *Employer as Contributor of $500 or More.*—When your contribution from your employer (in the form of salary, fee, etc.) amounts to $500 or more, it is not necessary to report such contribution under "D 13" and "D 14," since the amount has already been reported under "D 5," and the name of the "employer" has been given under Item "B" on page 1 of this report.

D. RECEIPTS (INCLUDING CONTRIBUTIONS AND LOANS):

Fill in every blank. If the answer to any numbered item is "None," write "None" in the space following the number.

Receipts (other than loans)

1. $.....Dues and assessments
2. $.....Gifts of money or anything of value
3. $.....Printed or duplicated matter received as a gift
4. $.....Receipts from sale of printed or duplicated matter
5. $.....Received for services (e.g., salary, fee, etc.)
6. $.....TOTAL for this Quarter (Add items "1" through "5")
7. $.....Received during previous Quarters of calendar year
8. $.....TOTAL from Jan. 1 through this Quarter (Add "6" and "7")

Loans Received

"The term 'contribution' includes a . . . *loan* . . ."—Sec. 302(a).

9. $.....TOTAL now owed to others on account of loans
10. $.....Borrowed from others during this Quarter
11. $.....Repaid to others during this Quarter

12. $.....''Expense money'' and Reimbursements received this Quarter

Contributors of $500 or more (from Jan. 1 through this Quarter)

13. Have there been such contributors? Please answer "yes" or "no": .....
14. In the case of each contributor whose contributions (including loans) during the "period" from January 1 through the last days of this Quarter total $500 or more:

Attach hereto plain sheets of paper, approximately the size of this page, tabulate data under the headings "Amount" and "Name and Address of Contributor"; and indicate whether the last day of the period is March 31, June 30, September 30, or December 31. Prepare such tabulation in accordance with the following example:

Amount	*Name and address of Contributor* ("*Period*" from Jan. 1 through....., 19.....)
$1,500.00	John Doe, 1621 Blank Bldg., New York, N.Y.
$1,785.00	The Roe Corporation, 2511 Doe Bldg., Chicago, Ill.
$3,285.00	TOTAL

NOTE ON ITEM "E".—(a) *In General.* "The term 'expenditure' includes a payment, distribution, loan, advance, deposit, or gift of money or anything of value, and includes a contract, promise, or agreement, whether or not legally enforceable, to make an expenditure"—Section 302(b) of the Lobbying Act.

(b) IF THIS REPORT IS FOR AN AGENT OR EMPLOYEE. In the case of many employees, all expenditures will come under telephone and telegraph (Item "E 6") and travel, food, lodging, and entertainment (Item "E 7").

E. EXPENDITURES (INCLUDING LOANS) in connection with legislative interests:

Fill in every blank. If the answer to any numbered item is "None," write "None" in the spaces following the number.

Expenditures (other than loans)

1. $.....Public relations and advertising services
2. $.....Wages, salaries, fees, commissions (other than item "1")
3. $.....Gifts or contributions made during Quarter
4. $.....Printed or duplicated matter, including distribution cost
5. $.....Office overhead (rent, supplies, utilities, etc.)
6. $.....Telephone and telegraph
7. $.....Travel, food, lodging, and entertainment
8. $.....All other expenditures
9. $.....TOTAL for this Quarter (Add "1" through "8")
10. $.....Expended during previous Quarters of calendar year
11. $.....TOTAL from January 1 through this Quarter (Add "9" and "10")

Loans Made to Others

"The term 'expenditure' includes a . . . *loan* . . ."—Sec. 302(b).

12. $.....TOTAL now owed to person filing
13. $.....Lent to others during this Quarter
14. $.....Repayment received during this Quarter

15. Recipients of Expenditures of $10 or More

In the case of expenditures made during this Quarter by, or on behalf of the person filing: Attach plain sheets of paper approximately the size of this page and tabulate data as to expenditures under the following heading: "Amount," "Date or Dates," "Name and Address of Recipient," "Purpose." Prepare such tabulation in accordance with the following example:

Amount	*Date or Dates—Name and Address of Recipient—Purpose*
$1,750.00	7-11: Roe Printing Co., 3214 Blank Ave., St. Louis, Mo.—Printing and mailing circulars on the "Marshbanks Bill."
$2,400.00	7-15, 8-15, 9-15: Britten & Blaten, 3127 Gremlin Bldg., Washington, D.C.—Public relations service at $800.00 per month.
$4,150.00	TOTAL

QUARTERLY REPORTS*

*All alphanumeric characters and monetary amounts refer to receipts and expenditures on page 2, paragraphs D and E of the Quarterly Report Form.

The following reports for the third calendar quarter of 1982 were received too late to be included in the published reports for that quarter:

(NOTE.—The form used for report is reproduced below. In the interest of economy in the RECORD, questions are not repeated, only the essential answers are printed, and are indicated by their respective headings.)

FILE ONE COPY WITH THE SECRETARY OF THE SENATE AND FILE TWO COPIES WITH THE CLERK OF THE HOUSE OF REPRESENTATIVES:

This page (page 1) is designed to supply identifying data; and page 2 (on the back of this page) deals with financial data.

PLACE AN "X" BELOW THE APPROPRIATE LETTER OR FIGURE IN THE BOX AT THE RIGHT OF THE "REPORT" HEADING BELOW:

"PRELIMINARY" REPORT ("Registration"): To "register," place an "X" below the letter "P" and fill out page 1 only.

"QUARTERLY" REPORT: To indicate which one of the four calendar quarters is covered by this Report, place an "X" below the appropriate figure. Fill out both page 1 and page 2 and as many additional pages as may be required. The first additional page should be numbered as page "3," and the rest of such pages should be "4," "5," "6," etc. Preparation and filing in accordance with instructions will accomplish compliance with all quarterly reporting requirements of the Act.

Year: 19.....

REPORT

PURSUANT TO FEDERAL REGULATION OF LOBBYING ACT

P	QUARTER			
	1st	2d	3d	4th
(Mark one square only)				

NOTE ON ITEM "A".—(a) IN GENERAL. This "Report" form may be used by either an organization or an individual, as follows:
(i) "Employee".—To file as an "employee", state (in Item "B") the name, address, and nature of business of the "employer". (If the "employee" is a firm [such as a law firm or public relations firm], partners and salaried staff members of such firm may join in filing a Report as an "employee".)
(ii) "Employer".—To file as an "employer", write "None" in answer to Item "B".
(b) SEPARATE REPORTS. An agent or employee should not attempt to combine his Report with the employer's Report:
(i) Employers subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their agents or employees.
(ii) Employees subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their employers.

A. ORGANIZATION OR INDIVIDUAL FILING:
1. State name, address, and nature of business.

2. If this Report is for an Employer, list names of agents or employees who will file Reports for this Quarter.

NOTE ON ITEM "B".—*Reports by Agents or Employees.* An employee is to file, each quarter, as many Reports as he has employers, except that: (a) If a particular undertaking is jointly financed by a group of employers, the group is to be considered as one employer, but all members of the group are to be named, and the contribution of each member is to be specified; (b) if the work is done in the interest of one person but payment therefor is made by another, a single Report—naming both persons as "employers"—is to be filed each quarter.

B. EMPLOYER.—State name, address, and nature of business. If there is no employer, write "None."

NOTE ON ITEM "C".—(a) The expression "in connection with legislative interests," as used in this Report, means "in connection with attempting, directly or indirectly, to influence the passage or defeat of legislation." "The term 'legislation' means bills, resolutions, amendments, nominations, and other matters pending or proposed in either House of Congress, and includes any other matter which may be the subject of action by either House"—§302(e).
(b) Before undertaking any activities in connection with legislative interests, organizations and individuals subject to the Lobbying Act are required to file a "Preliminary" Report (Registration).
(c) After beginning such activities, they must file a "Quarterly" Report at the end of each calendar quarter in which they have either received or expended anything of value in connection with legislative interests.

C. LEGISLATIVE INTERESTS, AND PUBLICATIONS in connection therewith:

1. State approximately how long legislative interests are to continue. If receipts and expenditures in connection with legislative interests have terminated, place an "X" in the box at the left, so that this Office will no longer expect to receive Reports.

2. State the general legislative interests of the person filing and set forth the *specific* legislative interests by reciting: (a) Short titles of statutes and bills; (b) House and Senate numbers of bills, where known; (c) citations of statutes, where known; (d) whether for or against such statutes and bills.

3. In the case of those publications which the person filing has caused to be issued or distributed in connection with legislative interests, set forth: (a) Description, (b) quantity distributed; (c) date of distribution, (d) name of printer or publisher (if publications were paid for by person filing) or name of donor (if publications were received as a gift).

(Answer items 1, 2, and 3 in the space below. Attach additional pages if more space is needed)

4. If this is a "Preliminary" Report (Registration) rather than a "Quarterly" Report, state below what the nature and amount of anticipated expenses will be; and if for an agent or employee, state also what the daily, monthly, or annual rate of compensation is to be. If this is a "Quarterly" Report, disregard this items "C4" and fill out items "D" and "E" on the back of this page. Do not attempt to combine a "Preliminary" Report (Registration) with a "Quarterly" Report.

AFFIDAVIT

[Omitted in printing]

PAGE 1

NOTE ON ITEM "D."—(a) *In General.* The term "contribution" includes *anything of value.* When an organization or individual uses printed or duplicated matter in a campaign attempting to influence legislation, money received by such organization or individual—for such printed or duplicated matter—is a "contribution." "The term 'contribution' includes a gift, subscription, loan, advance, or deposit of money, or anything of value, and includes a contract, promise, or agreement, whether or not legally enforceable, to make a contribution"—Section 302(a) of the Lobbying Act.

(b) IF THIS REPORT IS FOR AN EMPLOYER.—(i) *In General.* Item "D" is designed for the reporting of all receipts from which expenditures are made, or will be made, in accordance with legislative interests.

(ii) *Receipts of Business Firms and Individuals.*—A business firm (or individual) which is subject to the Lobbying Act by reason of expenditures which it makes in attempting to influence legislation—but which has no funds to expend except those which are available in the ordinary course of operating a business not connected in any way with the influencing of legislation—will have no receipts to report, even though it does have expenditures to report.

(iii) *Receipts of Multipurpose Organizations.*—Some organizations do not receive any funds which are to be expended solely for the purpose of attempting to influence legislation. Such organizations make such expenditures out of a general fund raised by dues, assessments, or other contributions. The percentage of the general fund which is used for such expenditures indicates the percentage of dues, assessments, or other contributions which may be considered to have been paid for that purpose. Therefore, in reporting receipts, such organizations may specify what that percentage is, and report their dues, assessments, and other contributions on that basis. However, each contributor of $500 or more is to be listed, regardless of whether the contribution was made solely for legislative purposes.

(c) IF THIS REPORT IS FOR AN AGENT OR EMPLOYEE.—(i) *In General.* In the case of many employees, all receipts will come under Items "D 5" (received for services) and "D 12" (expense money and reimbursements). In the absence of a clear statement to the contrary, it will be presumed that your employer is to reimburse you for all expenditures which you make in connection with legislative interests.

(ii) *Employer as Contributor of $500 or More.*—When your contribution from your employer (in the form of salary, fee, etc.) amounts to $500 or more, it is not necessary to report such contribution under "D 13" and "D 14," since the amount has already been reported under "D 5," and the name of the "employer" has been given under Item "B" on page 1 of this report.

D. RECEIPTS (INCLUDING CONTRIBUTIONS AND LOANS):

Fill in every blank. If the answer to any numbered item is "None," write "None" in the space following the number.

Receipts (other than loans)

1. $.....Dues and assessments
2. $.....Gifts of money or anything of value
3. $.....Printed or duplicated matter received as a gift
4. $.....Receipts from sale of printed or duplicated matter
5. $.....Received for services (e.g., salary, fee, etc.)

6. $.....TOTAL for this Quarter (Add items "1" through "5")
7. $.....Received during previous Quarters of calendar year

8. $.....TOTAL from Jan. 1 through this Quarter (Add "6" and "7")

Loans Received

"The term 'contribution' includes a . . . *loan* . . ."—Sec. 302(a).

9. $.....TOTAL now owed to others on account of loans
10. $.....Borrowed from others during this Quarter
11. $.....Repaid to others during this Quarter

12. $....."Expense money" and Reimbursements received this Quarter

Contributors of $500 or more (from Jan. 1 through this Quarter)

13. Have there been such contributors?

Please answer "yes" or "no": .....

14. In the case of each contributor whose contributions (including loans) during the "period" from January 1 through the last days of this Quarter total $500 or more:

Attach hereto plain sheets of paper, approximately the size of this page, tabulate data under the headings "Amount" and "Name and Address of Contributor"; and indicate whether the last day of the period is March 31, June 30, September 30, or December 31. Prepare such tabulation in accordance with the following example:

Amount	*Name and address of Contributor* ("*Period*" from Jan. 1 through....., 19.....)
$1,500.00	John Doe, 1621 Blank Bldg., New York, N.Y.
$1,785.00	The Roe Corporation, 2511 Doe Bldg., Chicago, Ill.
$3,285.00	TOTAL

NOTE ON ITEM "E".—(a) *In General.* "The term 'expenditure' includes a payment, distribution, loan, advance, deposit, or gift of money or anything of value, and includes a contract, promise, or agreement, whether or not legally enforceable, to make an expenditure"—Section 302(b) of the Lobbying Act.

(b) IF THIS REPORT IS FOR AN AGENT OR EMPLOYEE. In the case of many employees, all expenditures will come under telephone and telegraph (Item "E 6") and travel, food, lodging, and entertainment (Item "E 7").

E. EXPENDITURES (INCLUDING LOANS) in connection with legislative interests:

Fill in every blank. If the answer to any numbered item is "None," write "None" in the spaces following the number.

Expenditures (other than loans)

1. $.....Public relations and advertising services
2. $.....Wages, salaries, fees, commissions (other than item "1")
3. $.....Gifts or contributions made during Quarter
4. $.....Printed or duplicated matter, including distribution cost
5. $.....Office overhead (rent, supplies, utilities, etc.)
6. $.....Telephone and telegraph
7. $.....Travel, food, lodging, and entertainment
8. $.....All other expenditures
9. $.....TOTAL for this Quarter (Add "1" through "8")
10. $.....Expended during previous Quarters of calendar year
11. $.....TOTAL from January 1 through this Quarter (Add "9" and "10")

Loans Made to Others

"The term 'expenditure' includes a . . . *loan* . . ."—Sec. 302(b).

12. $.....TOTAL now owed to person filing
13. $.....Lent to others during this Quarter
14. $.....Repayment received during this Quarter

15. Recipients of Expenditures of $10 or More

In the case of expenditures made during this Quarter by, or on behalf of the person filing: Attach plain sheets of paper approximately the size of this page and tabulate data as to expenditures under the following heading: "Amount," "Date or Dates," "Name and Address of Recipient," "Purpose." Prepare such tabulation in accordance with the following example:

Amount	*Date or Dates—Name and Address of Recipient—Purpose*
$1,750.00	7-11: Roe Printing Co., 3214 Blank Ave., St. Louis, Mo.—Printing and mailing circulars on the "Marshbanks Bill."
$2,400.00	7-15, 8-15, 9-15: Britten & Blaten, 3127 Gremlin Bldg., Washington, D.C.—Public relations service at $800.00 per month.
$4,150.00	TOTAL
